

# CONTENTS

1 Introduction: Relating Disease to Exposure 3

## **Section A. Exposure and Disease in Individuals**

2 Characteristics of Exposure and its Measurement 27

3 Applications of Exposure Assessment in Epidemiology 65

4 Personal Exposure-Tissue Concentration Relationships 101

5 Biomarkers as Indicators of Exposure 137

6 Disease Process Models 158

## **Section B. Exposure and Disease in Populations**

7 Epidemiologic Evaluation of Environmental Hazards 179

8 Uncertainty in Measuring Risk 198

9 Dosimetry in Epidemiology 223

## **Section C. Practical Applications of Disease Process Models**

10 Modeling Proportional Disease Processes 251

11 Reversible Proportional Disease Processes: Effects of Ammonia  
and Ozone on Respiratory Symptoms 278

## CONTENTS

- 12 Irreversible Proportional Diseases Processes: Neurobehavioral Effects of Mercury, Popcorn Workers' Lung 304
- 13 Modeling Discrete Disease Processes 320
- 14 Reversible Discrete Disease Processes: Asthma and Indoor Air, Dermatitis and Metalworking Fluids 347
- 15 Irreversible Discrete Disease Processes: Silica and Lung Cancer 366
- 16 Where Do We Go From Here? 383
- Annotated Reference Books 391
- References 393
- Index 415
