
AIR POLLUTION CONTROL ENGINEERING

Second Edition

Noel de Nevers

CONTENTS

Preface	xvi
Notation	xviii
1 Introduction to Air Pollution Control	1
1.1 Some of the History of Air Pollution Control in the United States of America	1
1.2 Why the Sudden Rise in Interest in 1969–1970?	3
1.3 Dirty Air Removal or Emission Control?	5
1.4 One Problem or a Family of Problems?	5
1.5 Emissions, Transport, Receptors	7
1.6 Units and Standards	9
1.7 The Plan of This Book	10
1.8 Summary	11
2 Air Pollution Effects	13
2.1 Effects of Air Pollution on Human Health	13
2.1.1 Animal Experiments	18
2.1.2 Short-Term Exposure of Human Volunteers	21
2.1.3 Epidemiology	21
2.1.4 Regulations to Protect Human Health	26
2.2 Air Pollution Effects on Property	27
2.3 Air Pollution Effects on Visibility	31
2.4 Summary	35

3	Air Pollution Control Laws and Regulations, Air Pollution Control Philosophies	40
3.1	U.S. Air Pollution Laws and Regulations	40
3.2	Air Pollution Control Philosophies	42
3.3	The Four Philosophies	43
3.3.1	The Emission Standard Philosophy	43
3.3.2	The Air Quality Standard Philosophy	49
3.3.3	Emission Tax Philosophy	52
3.3.4	Cost-Benefit Philosophy	55
3.4	Market Control and Emission Rights	58
3.5	Principal U.S. Air Pollution Laws	59
3.6	Summary	60
4	Air Pollution Measurements, Emission Estimates	63
4.1	A Representative Sample	64
4.2	Getting the Representative Sample to the Detector	68
4.3	Concentration Determination	68
4.4	Averaging	69
4.5	Standard Analytical Methods	71
4.6	Determining Pollutant Flow Rates	72
4.7	Isokinetic Sampling	73
4.8	Emission Factors	74
4.9	Visible Emissions	77
4.10	Summary	78
5	Meteorology for Air Pollution Control Engineers	83
5.1	The Atmosphere	83
5.2	Horizontal Atmospheric Motion	84
5.2.1	Equatorial Heating, Polar Cooling	84
5.2.2	The Effect of the Earth's Rotation	86
5.2.3	The Influence of the Ground and the Sea	89
5.3	Vertical Motion in the Atmosphere	90
5.3.1	Air Density Change with Temperature and Humidity	90
5.3.2	Air Density Change with Pressure	91
5.3.3	Atmospheric Stability	95
5.3.4	Mixing Height	100
5.3.5	Moisture	102
5.4	Winds	106
5.4.1	Velocities	106
5.4.2	Wind Direction	107
5.5	Temperature Inversions	111
5.6	Fumigations, Stagnations	112
5.7	Meteorological Forecasts	114
5.8	Summary	114

6	Air Pollutant Concentration Models	119
6.1	Introduction	119
6.2	Fixed-Box Models	120
6.3	Diffusion Models	126
6.3.1	The Gaussian Plume Idea	126
6.3.2	Gaussian Plume Derivation	128
6.3.3	Some Modifications of the Basic Gaussian Plume Equation	137
6.4	Plume Rise	142
6.5	Long-Term Average Uses of Gaussian Plume Models	143
6.6	Pollutant Creation and Decay in the Atmosphere	144
6.7	Multiple Cell Models	146
6.8	Receptor-Oriented and Source-Oriented Air Pollution Models	148
6.9	Other Topics	149
6.9.1	Building Wakes	149
6.9.2	Aerodynamic Downwash	149
6.9.3	Transport Distances	150
6.9.4	Initial Dispersion	150
6.9.5	EPA-Recommended Models	151
6.10	Summary	152
7	General Ideas in Air Pollution Control	160
7.1	Alternatives	160
7.1.1	Improve Dispersion	160
7.1.2	Reduce Emissions by Process Change, Pollution Prevention	165
7.1.3	Use a Downstream Pollution Control Device	166
7.2	Resource Recovery	166
7.3	The Ultimate Fate of Pollutants	167
7.4	Designing Air Pollution Control Systems and Equipment	168
7.4.1	Air Pollution Control Equipment Costs	168
7.5	Fluid Velocities in Air Pollution Control Equipment	170
7.6	Minimizing Volumetric Flow Rate and Pressure Drop	171
7.7	Efficiency, Penetration, Nines	173
7.8	Homogeneous and Nonhomogeneous Pollutants	175
7.9	Basing Calculations on Inert Flowrates	176
7.10	Combustion	177
7.10.1	What Burns?	178
7.10.2	Heat of Combustion	178
7.10.3	Explosive or Combustible Limits	178
7.10.4	Equilibrium in Combustion Reactions	181
7.10.5	Combustion Kinetics, Burning Rates	182
7.10.6	Mixing in Combustion Reactions	183
7.10.7	Flame Temperature	184
7.10.8	Combustion Time	188
7.10.9	The Volume and Composition of Combustion Products	191
7.11	Changing Volumetric Flow Rates	194

7.12	Acid Dew Point	196
7.13	Catalysts for Air Pollution Control	199
7.14	Summary	202
8	The Nature of Particulate Pollutants	209
8.1	Primary and Secondary Particulates	209
8.2	Settling Velocity and Drag Forces	216
8.2.1	Stokes' Law	217
8.2.2	Particles Too Large for Stokes' Law	219
8.2.3	Particles Too Small for Stokes' Law	222
8.2.4	Stokes Stopping Distance	225
8.2.5	Aerodynamic Particle Diameter	226
8.2.6	Diffusion of Particles	226
8.3	Particle Size Distribution Functions	227
8.3.1	A Very Simple Example: The Population of the United States	228
8.3.2	The Gaussian, or Normal, Distribution	232
8.3.3	The Log-Normal Distribution	235
8.3.4	Distributions by Weight and by Number	238
8.4	Behavior of Particles in the Atmosphere	239
8.5	Summary	242
9	Control of Primary Particulates	249
9.1	Wall Collection Devices	249
9.1.1	Gravity Settlers	250
9.1.2	Centrifugal Separators	254
9.1.3	Electrostatic Precipitators (ESP)	266
9.2	Dividing Collection Devices	280
9.2.1	Surface Filters	281
9.2.2	Depth Filters	292
9.2.3	Filter Media	298
9.2.4	Scrubbers for Particulate Control	298
9.3	Choosing a Collector	313
9.4	Summary	314
10	Control of Volatile Organic Compounds (VOCs)	329
10.1	Vapor Pressure, Equilibrium Vapor Content, Evaporation	330
10.2	VOCs	336
10.3	Control by Prevention	337
10.3.1	Substitution	337
10.3.2	Process Modification	338
10.3.3	Leakage Control	338
10.4	Control by Concentration and Recovery	350
10.4.1	Condensation	350

10.4.2	Adsorption	354
10.4.3	Absorption (Scrubbing)	362
10.5	Control by Oxidation	370
10.5.1	Combustion (Incineration)	371
10.5.2	Biological Oxidation (Biofiltration)	381
10.6	The Mobile Source Problem	381
10.7	Choosing a Control Technology	382
10.8	Summary	382
11	Control of Sulfur Oxides	395
11.1	The Elementary Oxidation-Reduction Chemistry of Sulfur and Nitrogen	396
11.2	An Overview of the Sulfur Problem	397
11.3	The Removal of Reduced Sulfur Compounds from Petroleum and Natural Gas Streams	400
11.3.1	The Uses and Limitations of Absorbers and Strippers for Air Pollution Control	403
11.3.2	Sulfur Removal from Hydrocarbons	403
11.4	Removal of SO ₂ from Rich Waste Gases	405
11.5	Removal of SO ₂ from Lean Waste Gases	408
11.5.1	Forced-Oxidation Limestone Wet Scrubbers	414
11.5.2	Other Approaches	419
11.6	Alternatives to "Burn and Then Scrub"	427
11.6.1	Change to a Lower Sulfur Content Fuel	427
11.6.2	Remove Sulfur from the Fuel	428
11.6.3	Modify the Combustion Process	428
11.6.4	Don't Burn at All	430
11.7	Summary	430
12	Control of Nitrogen Oxides	439
12.1	An Overview of the Nitrogen Oxides Problem	439
12.1.1	Comparison with Sulfur Oxides	439
12.1.2	Reactions in the Atmosphere	443
12.1.3	NO and NO ₂ Equilibrium	443
12.1.4	Thermal, Prompt, and Fuel NO _x	446
12.2	Thermal NO	448
12.2.1	The Zeldovich Kinetics of Thermal NO Formation	448
12.2.2	Heating and Cooling Times	453
12.3	Prompt NO	457
12.4	Fuel NO	457
12.5	Noncombustion Sources of Nitrogen Oxides	458
12.6	Control of Nitrogen Oxide Emissions	459
12.6.1	Nitrogen Oxide Control by Combustion Modification	459
12.6.2	Nitrogen Oxide Control by Postflame Treatment	461
12.7	Units and Standards in NO _x Control	462
12.8	Summary	464

13	The Motor Vehicle Problem	471
13.1	An Overview of the Problem of Air Pollution from Motor Vehicles	471
13.1.1	Emissions	471
13.1.2	The Regulatory History of Motor Vehicle Air Pollution Control	472
13.2	The Internal Combustion (IC) Engine	473
13.2.1	The Four-Stroke IC Gasoline Engine	474
13.2.2	Pollutant Formation	476
13.3	Crankcase and Evaporative Emissions	488
13.4	Tailpipe Emissions	491
13.4.1	Lean Operation	491
13.4.2	Exhaust Gas Recirculation (EGR)	491
13.4.3	Reduce Flame Quenching	492
13.4.4	Speed the Warmup	492
13.4.5	Catalytically Treat the Combustion Products	494
13.4.6	Change the Fuel	497
13.4.7	Computer Control	500
13.4.8	Lean Burn	500
13.5	Tampering and Emission Testing	501
13.6	Storage and Transfer Emissions	501
13.7	Alternative Power Plants	501
13.7.1	Diesel Engines	502
13.7.2	Gasoline-Powered Two-Stroke Engines	503
13.7.3	Gas Turbine Engines	503
13.7.4	Electric Vehicles	504
13.7.5	Hybrid Vehicles	504
13.7.6	Other Options	505
13.8	Reducing Our Dependence on Motor Vehicles	505
13.9	Summary	506
14	Air Pollutants and Global Climate	511
14.1	Global Warming	512
14.1.1	Carbon Dioxide	518
14.1.2	Other Greenhouse Gases, Aerosols	522
14.2	Stratospheric Ozone Depletion and Chlorofluorocarbons	524
14.3	Acid Rain	527
14.4	The Regulatory Situation	530
14.5	How Sure Are We?	530
14.6	Summary	531
15	Other Topics	536
15.1	Carbon Monoxide (CO)	536
15.2	Lead	538
15.3	Hazardous Air Pollutants, HAP, (Air Toxics)	540

15.4	Indoor Air Pollution	542
15.4.1	Indoor and Outdoor Concentrations	542
15.4.2	Models	544
15.4.3	Control of Indoor Air Quality	547
15.5	The Radon Problem	550
15.6	Summary	552
Appendixes		558
A	Useful Values	558
A.1	Values of the Universal Gas Constant	558
A.2	Vapor Pressure Equations	558
B	Table of Acronyms	560
C	Fuels	562
C.1	Where Fuels Come From, How They Burn	562
C.2	Natural Gas	563
C.3	Liquid Petroleum Gas, Propane, and Butane	564
C.4	Liquid Fuels	565
C.5	Solid Fuels	566
C.6	Comparing Fuel Prices and Emissions	569
D	Elementary Chemistry of Ozone Production	571
E	Adsorber Breakthrough Time	574
F	Answers to Selected Problems	580
	Index	582
