	<i>Acknowledgments</i>	<i>xxi</i>
	<i>Introduction</i>	<i>xxiii</i>
Part I	Preparation	
Chapter 1	Data Warehouse and Business Intelligence Overview	3
	Business Intelligence Overview	4
	Definition	4
	Value of Business Intelligence	6
	Breakdown of Business and Intelligence	7
	Business Intelligence Success Factors	8
	Purpose of BI	9
	BI User Presentation	11
	BI Tool and Architecture	15
	Advancements Due to Globalization	17
	Data Warehouse Overview	17
	Definition	18
	Data Warehouse System	19
	Data Warehouse Architecture	20
	Data Flow Terminology	22
	Data Warehouse Purpose	23
	Data Structure Strategy	26
	Data Warehouse Business	27
	Frequently Asked Questions	28
	Current Systems Good Enough?	29
	What Is the Value of a Data Warehouse?	30
	How Much Will It Cost?	32
	How Long Will It Take?	32
	What Will Make Us Successful?	34

Chapter 2	Data in the Organization	39
	Corporate Asset	40
	Data in Context	40
	Data Quality	42
	Data Vocabulary	44
	Data Components	46
	Organizing the Data	50
	Structuring the Data	50
	Data Models	51
	Data Architecture	57
	Competitive Advantage	62
	Data Model Build or Buy	63
	Mentoring the Business	66
Chapter 3	Reasons for Building	69
	Platform Migration	71
	Business Continuity	72
	Reverse Engineering	72
	Data Quality	73
	Parallel Environments	74
	Added Value	75
	Data Warehouse Centralization	75
	Corporate Merger	76
	In-house Merging	76
	Central Design and Local Usage	76
	Data Mart Consolidation	77
	New Initiative	79
	New Initiative: Dynamic Reporting	81
	“Just Build It”	82
	Data Floundation	84
	Reasons for NOT Building a Data Warehouse	86
	Poor Data Quality	86
	Lack of Business Interest	86
	Lack of Sponsorship	87
	Unclear Focus	87
	Sufficiency of Current Systems	87
	Lack of Resources	87

	Unstable Environment	88
	Too Costly	88
	Poor Management	88
Chapter 4	Data Warehouse and Business Intelligence Strategy	89
	Business Intelligence Strategy	90
	Business Purpose	90
	Business Usage	91
	Architecture Overview	93
	Data Warehouse Strategy	94
	Usage	95
	DW Architecture	96
	Focus and Success	99
	Enterprise or Line of Business?	99
	Goal Focused	100
	Success: When Are We Done?	100
	Where to Start?	101
	For BI	102
	For DW	103
	How to Start?	104
	For BI	104
	For DW	106
	Project Phasing	109
	How Long Will It Take, Revisited	110
	Points of Interest	112
	Typical Failure Reasons	112
	Basic Values	117
Chapter 5	Project Resources: Roles and Insights	119
	Key Observations	120
	Project Teams	120
	Senior Expertise	121
	Leadership	122
	Project Sponsor	124
	Data Warehouse Executive	125
	Team Structure	125
	Executive Sponsorship	125
	Data Stewards	127
	Basic Resources	127

	Periodic Reviews: Progress Audit	132
	Center of Competence	132
Chapter 6	Write-It-Up Overview	135
	Project Charter	136
	Project Scope	138
	Statement of Work (SOW)	139
Part II	Components	
Chapter 7	Business Intelligence: Data Marts and Usage	143
	Why Model the Data?	145
	Types of Data Models	146
	Design of Data	149
	Fact Tables	157
	Types of Facts	158
	Types of Fact Tables	160
	Source of Measures	162
	Fact Table Key	163
	Grain of Fact Table	163
	Fact Table Density	164
	Factless Fact Table	164
	Dimensions	165
	Dimension or Measure	166
	History and Dates	166
	Dimension Table Key	171
	Grain of Dimension	172
	Source and Value of Dimension Attributes	173
	Types of Dimensions	174
	Hierarchies and Helper Tables	184
	Profile Tables	186
	Number of Dimensions	188
	Sizing	188
Chapter 8	Enterprise Data Models	191
	Data Models Overview	192
	Inmon and Kimball	195
	EDM Purpose	196

EDM Benefit	196
Data Model: Where to Start	197
Full Top-Down Data Model	198
Subject Area Model	199
Concept Model	201
Entity Relationship Model	202
Bus Architecture	203
Purchased Data Model	205
Model Insights	207
Data Components	207
Normalizing a Data Model	208
Supertype/Subtype Models	214
Capturing History in a Normalized Data Model	217
Surrogate Keys	222
Logical vs. Physical Data Model	222
Referential Integrity or Not	224
Other Data Models	225
Input Data Model	225
Staging Data Model	225
Final Thoughts	226
Chapter 9 Data Warehouse Architecture: Components	227
Architecture Overview	228
Architect Roles	228
Solution Architect	229
Data Warehouse Architect	229
Technical Architect	230
Data Architect	230
ETL Architect	230
BI Architect	231
Overall	231
Architecture Tiers	232
Single-Tier Architecture	232
Classic Two-Tier Architecture	233
Advanced Three-Tier Architecture	235

	Data Warehouse Architectures	236
	Solo Data Mart Architecture	236
	Bus Architecture	237
	Central Repository Architecture	238
	Federated Architecture	239
	Components (Layers)	240
	Data Sources	240
	Data Population	240
	Data Organization	241
	Data Distribution	241
	Information Out	241
	Implementation Approaches	242
	Data Design and Data Flow	243
	Logical vs. Physical Models	243
	Top-Down Approach	246
	Bottom-Up Approach	246
	Hybrid Approach	249
	Accelerators	250
	Data Acquisition Layer	251
	Centralized Data Layer	251
	Data Distribution Layer	252
	Performance Layer	252
	User Presentation Layer	253
	Methodology	253
	Out-of-the-Box Solution	254
Chapter 10	ETL and Data Quality	255
	Architecture	257
	Data Population	258
	Data Distribution	259
	ETL Mapping	260
	Initial and Incremental Loads	262
	ETL vs. ELT vs. ETL	263
	Parallel Operations	265
	ETL Roles	265
	Data Flow Diagrams	267
	Operational Data Store (ODS)	267

Source Systems	268
No Source	268
Multiple Sources	269
Alternate Sources (SIFs)	269
Unstructured Data	271
Data Profiling	271
Data Capture	272
Multiple Large Files	272
Switch Files	272
Failsafe Strategy	273
Transformation and Staging	274
Preparation	275
Surrogate Keys	277
Referential Integrity	280
Aggregating, Profiling, and Summarizing	280
Code Tables	281
Loading	281
History vs. No History	282
Insert/Update/Upsert/Delete	282
Population Information	282
Load Scheduling	283
Staging for EDW vs. Staging for Bus Architecture	283
Data Distribution	285
3NF to Star	285
Data Quality	287
ETL Tools	289
Chapter 11 Project Planning and Methodology	291
Fundamentals	294
Risk: Phased Development	295
Risk: Data Quality	296
Risk: Resources	296
Risk: Cost	297
Change Management	297
Best Practices	298
Mistakes	298

Project Plan Methodology	299
Business Requirements	301
Strategy and Plan	302
Solution Outline	304
Design	304
Build	305
Deploy	306
Use	306

Part III Let's Build

Chapter 12	Working Scenarios	309
	The Chef: Let's Get Cooking!	312
	Top-Down (Enterprise Repository)	315
	Vocabulary	317
	Centralized Data Model	318
	Data Architecture	319
	Sources	321
	Data Model	321
	Database	323
	Acquisition	323
	Solution Overview	324
	Bottom-Up (OLAP Reporting)	325
	End Result	327
	Vocabulary	332
	Data Architecture	332
	Conformed Dimension Administration	334
	Sources	334
	Solution Overview	334
	Hybrid (Normalized Design and OLAP)	336
	First Efforts	338
	Data Models	338
	Data Architecture	339
	Solution Overview	341
	Merging	342
	Plan of Action	343
	No Input: Structured Input Files	345

	Integrating Phase 2	347
	Change Management	348
	The Bigger Picture: Enterprise Information Architecture (EIA)	348
Chapter 13	Data Governance	351
	What Is Data Governance?	352
	Definition	352
	Reasons for Data Governance	353
	Organizational Structure	354
	Drivers and Initiatives	356
	Data Governance: Major Points	357
	Security and Sensitivity	357
	Data Quality	358
	Ownership	359
	Change Control	360
	Data Governance Readiness	361
Chapter 14	Post-Project Review	363
	Synopsis	364
	Project Review	365
	Next Phase	370
	Index	371
