Introduction	xix
<b>1. Water Resources Planning and Management: An Overview</b>	<b>3</b>
1. Introduction	3
2. Planning and Management Issues: Some Case Studies	4
2.1. Kurds Seek Land, Turks Want Water	4
2.2. Sharing the Water of the Jordan River Basin: Is There a Way?	6
2.3. Mending the 'Mighty and Muddy' Missouri	7
2.4. The Endangered Salmon	7
2.5. The Yellow River: How to Keep the Water Flowing	9
2.6. Lake Source Cooling: Aid to Environment or Threat to Lake?	10
2.7. Managing Water in the Florida Everglades	11
2.8. Restoration of Europe's Rivers and Seas	13
2.8.1. The Rhine	13
2.8.2. The Danube	14
2.8.3. The North and Baltic Seas	15
2.9. Egypt and the Nile: Limits to Agricultural Growth	16
2.10. Damming the Mekong	16
3. So, Why Plan, Why Manage?	18
3.1. Too Little Water	20
3.2. Too Much Water	20
3.3. Polluted Water	21
3.4. Degradation of Aquatic and Riparian Ecosystems	21
3.5. Other Planning and Management Issues	21
4. System Components, Planning Scales and Sustainability	22
4.1. Spatial Scales for Planning and Management	22
4.2. Temporal Scales for Planning and Management	23
4.3. Sustainability	23
5. Planning and Management	24
5.1. Approaches	24
5.1.1. Top-Down Planning and Management	25
5.1.2. Bottom-Up Planning and Management	25
5.1.3. Integrated Water Resources Management	26
5.2. Planning and Management Aspects	26
5.2.1. Technical Aspects	26
5.2.2. Economic and Financial Aspects	27
5.2.3. Institutional Aspects	28
5.3. Analyses for Planning and Management	28
5.4. Models for Impact Prediction and Evaluation	30
5.5. Shared-Vision Modelling	31
5.6. Adaptive Integrated Policies	31
5.7. Post-Planning and Management Issues	32

6. Meeting the Planning and Management Challenges: A Summary 32	5.6. Interpreting Model Results 75
7. References 34	5.7. Reporting Model Results 75
<b>2. Water Resource Systems Modelling: Its Role in Planning and Management 39</b>	<b>6. Issues of Scale 75</b>
1. Introduction 39	6.1. Process Scale 75
2. Modelling of Water Resources Systems 41	6.2. Information Scale 76
2.1. An Example Modelling Approach 41	6.3. Model Scale 76
2.2. Characteristics of Problems to be Modelled 41	6.4. Sampling Scale 76
3. Challenges in Water Resources Systems Modelling 43	6.5. Selecting the Right Scales 76
3.1. Challenges of Planners and Managers 43	7. Conclusions 77
3.2. Challenges of Modelling 44	8. References 77
3.3. Challenges of Applying Models in Practice 45	
4. Developments in Modelling 46	<b>4. Optimization Methods 81</b>
4.1. Modelling Technology 46	1. Introduction 81
4.2. Decision Support Systems 47	2. Comparing Time Streams of Economic Benefits and Costs 81
4.2.1. Shared-Vision Modelling 49	2.1. Interest Rates 82
4.2.2. Open Modelling Systems 51	2.2. Equivalent Present Value 82
4.2.3. Example of a DSS for River Flood Management 51	2.3. Equivalent Annual Value 82
5. Conclusions 54	3. Non-linear Optimization Models and Solution Procedures 83
6. References 55	3.1. Solution Using Calculus 84
<b>3. Modelling Methods for Evaluating Alternatives 59</b>	3.2. Solution Using Hill Climbing 84
1. Introduction 59	3.3. Solution Using Lagrange Multipliers 86
1.2. Model Components 60	3.3.1. Approach 86
2. Plan Formulation and Selection 61	3.3.2. Meaning of the Lagrange Multiplier 88
2.1. Plan Formulation 61	4. Dynamic Programming 90
2.2. Plan Selection 63	4.1. Dynamic Programming Networks and Recursive Equations 90
3. Modelling Methods: Simulation or Optimization 64	4.2. Backward-Moving Solution Procedure 92
3.1. A Simple Planning Example 65	4.3. Forward-Moving Solution Procedure 95
3.2. Simulation Modelling Approach 66	4.4. Numerical Solutions 96
3.3. Optimization Modelling Approach 66	4.5. Dimensionality 97
3.4. Simulation Versus Optimization 67	4.6. Principle of Optimality 97
3.5. Types of Models 69	4.7. Additional Applications 97
3.5.1. Types of Simulation Models 69	4.7.1. Capacity Expansion 98
3.5.2. Types of Optimization Models 70	4.7.2. Reservoir Operation 102
4. Model Development 71	4.8. General Comments on Dynamic Programming 112
5. Managing Modelling Projects 72	5. Linear Programming 113
5.1. Creating a Model Journal 72	5.1. Reservoir Storage Capacity–Yield Models 114
5.2. Initiating the Modelling Project 72	5.2. A Water Quality Management Problem 117
5.3. Selecting the Model 73	5.2.1. Model Calibration 118
5.4. Analysing the Model 74	5.2.2. Management Model 119
5.5. Using the Model 74	5.3. A Groundwater Supply Example 124
	5.3.1. A Simplified Model 125
	5.3.2. A More Detailed Model 126

5.3.3. An Extended Model	127	3. Distributions of Random Events	179
5.3.4. Piecewise Linearization Methods	128	3.1. Parameter Estimation	179
5.4. A Review of Linearization Methods	129	3.2. Model Adequacy	182
6. A Brief Review	132	3.3. Normal and Lognormal Distributions	186
7. References	132	3.4. Gamma Distributions	187
<b>5. Fuzzy Optimization</b>	<b>135</b>	3.5. Log-Pearson Type 3 Distribution	189
1. Fuzziness: An Introduction	135	3.6. Gumbel and GEV Distributions	190
1.1. Fuzzy Membership Functions	135	3.7. L-Moment Diagrams	192
1.2. Membership Function Operations	136	4. Analysis of Censored Data	193
2. Optimization in Fuzzy Environments	136	5. Regionalization and Index-Flood Method	195
3. Fuzzy Sets for Water Allocation	138	6. Partial Duration Series	196
4. Fuzzy Sets for Reservoir Storage and Release Targets	139	7. Stochastic Processes and Time Series	197
5. Fuzzy Sets for Water Quality Management	140	7.1. Describing Stochastic Processes	198
6. Summary	144	7.2. Markov Processes and Markov Chains	198
7. Additional References (Further Reading)	144	7.3. Properties of Time-Series Statistics	201
<b>6. Data-Based Models</b>	<b>147</b>	8. Synthetic Streamflow Generation	203
1. Introduction	147	8.1. Introduction	203
2. Artificial Neural Networks	148	8.2. Streamflow Generation Models	205
2.1. The Approach	148	8.3. A Simple Autoregressive Model	206
2.2. An Example	151	8.4. Reproducing the Marginal Distribution	208
2.3. Recurrent Neural Networks for the Modelling of Dynamic Hydrological Systems	153	8.5. Multivariate Models	209
2.4. Some Applications	153	8.6. Multi-Season, Multi-Site Models	211
2.4.1. RNN Emulation of a Sewerage System in the Netherlands	154	8.6.1. Disaggregation Models	211
2.4.2. Water Balance in Lake IJsselmeer	155	8.6.2. Aggregation Models	213
3. Genetic Algorithms	156	9. Stochastic Simulation	214
3.1. The Approach	156	9.1. Generating Random Variables	214
3.2. Example Iterations	158	9.2. River Basin Simulation.	215
4. Genetic Programming	159	9.3. The Simulation Model	216
5. Data Mining	163	9.4. Simulation of the Basin	216
5.1. Data Mining Methods	163	9.5. Interpreting Simulation Output	217
6. Conclusions	164	10. Conclusions	223
7. References	165	11. References	223
<b>7. Concepts in Probability, Statistics and Stochastic Modelling</b>	<b>169</b>	<b>8. Modelling Uncertainty</b>	<b>231</b>
1. Introduction	169	1. Introduction	231
2. Probability Concepts and Methods	170	2. Generating Values From Known Probability Distributions	231
2.1. Random Variables and Distributions	170	3. Monte Carlo Simulation	233
2.2. Expectation	173	4. Chance Constrained Models	235
2.3. Quantiles, Moments and Their Estimators	173	5. Markov Processes and Transition Probabilities	236
2.4. L-Moments and Their Estimators	176	6. Stochastic Optimization	239

<b>9. Model Sensitivity and Uncertainty Analysis</b>	<b>255</b>	4.3. Ecological Criteria 306
1. Introduction	255	4.4. Social Criteria 308
2. Issues, Concerns and Terminology	256	5. Multi-Criteria Analyses 309
3. Variability and Uncertainty In Model Output	258	5.1. Dominance 310
3.1. Natural Variability	259	5.2. The Weighting Method 311
3.2. Knowledge Uncertainty	260	5.3. The Constraint Method 312
3.2.1. Parameter Value Uncertainty	260	5.4. Satisficing 313
3.2.2. Model Structural and Computational Errors	260	5.5. Lexicography 313
3.3. Decision Uncertainty	260	5.6. Indifference Analysis 313
4. Sensitivity and Uncertainty Analyses	261	5.7. Goal Attainment 314
4.1. Uncertainty Analyses	261	5.8. Goal-Programming 315
4.1.1. Model and Model Parameter Uncertainties	262	5.9. Interactive Methods 315
4.1.2. What Uncertainty Analysis Can Provide	265	5.10. Plan Simulation and Evaluation 316
4.2. Sensitivity Analyses	265	6. Statistical Summaries of Performance Criteria 320
4.2.1. Sensitivity Coefficients	267	6.1. Reliability 321
4.2.2. A Simple Deterministic Sensitivity Analysis Procedure	267	6.2. Resilience 321
4.2.3. Multiple Errors and Interactions	269	6.3. Vulnerability 321
4.2.4. First-Order Sensitivity Analysis	270	7. Conclusions 321
4.2.5. Fractional Factorial Design Method	272	8. References 322
4.2.6. Monte Carlo Sampling Methods	273	
5. Performance Indicator Uncertainties	278	<b>11. River Basin Planning Models</b> 325
5.1. Performance Measure Target Uncertainty	278	1. Introduction 325
5.2. Distinguishing Differences Between Performance Indicator Distributions	281	1.1. Scales of River Basin Processes 326
6. Communicating Model Output Uncertainty	283	1.2. Model Time Periods 327
7. Conclusions	285	1.3. Modelling Approaches for River Basin Management 328
8. References	287	2. Modelling the Natural Resources System and Related Infrastructure 328
<b>10. Performance Criteria</b>	<b>293</b>	2.1. Watershed Hydrological Models 328
1. Introduction	293	2.1.1. Classification of Hydrological Models 329
2. Informed Decision-Making	294	2.1.2. Hydrological Processes: Surface Water 329
3. Performance Criteria and General Alternatives	295	2.1.3. Hydrological Processes: Groundwater 333
3.1. Constraints On Decisions	296	2.1.4. Modelling Groundwater: Surface Water Interactions 336
3.2. Tradeoffs	296	2.1.5. Streamflow Estimation 339
4. Quantifying Performance Criteria	297	2.1.6. Streamflow Routing 341
4.1. Economic Criteria	298	2.2. Lakes and Reservoirs 342
4.1.1. Benefit and Cost Estimation	299	2.2.1. Estimating Active Storage Capacity 343
4.1.2. A Note Concerning Costs	302	2.2.2. Reservoir Storage-Yield Functions 344
4.1.3. Long and Short-Run Benefit Functions	303	2.2.3. Evaporation Losses 346
4.2. Environmental Criteria	305	2.2.4. Over and Within-Year Reservoir Storage and Yields 347
		2.2.5. Estimation of Active Reservoir Storage Capacities for Specified Yields 348
		2.3. Wetlands and Swamps 354
		2.4. Water Quality and Ecology 354

3.	Modelling the Socio-Economic Functions In a River Basin	355	4.10.	Sediments	400
3.1.	Withdrawals and Diversions	355	4.10.1.	Processes and Modelling Assumptions	401
3.2.	Domestic, Municipal and Industrial Water Demand	356	4.10.2.	Sedimentation	401

## Appendix B: Monitoring and Adaptive Management 559

1. Introduction	559
2. System Status	561
2.1. System Status Indicators	562
3. Information Needs	562
3.1. Information Objectives and Priorities	563
4. Monitoring Plans	563
5. Adaptive Monitoring	564
5.1. Risk Assessments For Monitoring	564
5.2. Use of Models	565
6. Network Design	565
6.1. Site Selection	566
6.2. Sampling/Measurement Frequencies	566
6.3. Quality Control	566
6.4. Water Quantity Monitoring	567
6.5. Water Quality Monitoring	568
6.6. Ecological Monitoring	569
6.7. Early-Warning Stations	569
6.8. Effluent Monitoring	570
7. Data Sampling, Collection and Storage	570
7.1. Overview	570
7.2. Remote Sensing	571
7.2.1. Optical Remote Sensing for Water Quality	571
7.2.2. Applications in the North Sea	572
8. Data Analyses	572
9. Reporting Results	573
9.1. Trend Plots	573
9.2. Comparison Plots	573
9.3. Map Plots	576
10. Information Use: Adaptive Management	576
11. Summary	578
12. References	578

## Appendix C: Drought Management 581

1. Introduction	581
2. Drought Impacts	581
3. Defining Droughts	584
4. Causes of Droughts	585
4.1. Global Patterns	586
4.2. Teleconnections	588
4.3. Climate Change	588
4.4. Land Use	590
5. Drought Indices	590
5.1. Percent of Normal Indices	590
5.2. Standardized Precipitation Index	590
5.3. Palmer Drought Severity Index	591
5.4. Crop Moisture Index	592
5.5. Surface Water Supply Index	592
5.6. Reclamation Drought Index	593
5.7. Deciles	594
5.8. Method of Truncation	594
5.9. Water Availability Index	594
5.10. Days of Supply Remaining	595
6. Drought Triggers	596
7. Virtual Drought Exercises	596
8. Conclusion	598
9. References	599

## Appendix D: Flood Management 603

1. Introduction	603
2. Managing Floods in the Netherlands	605
2.1. Flood Frequency and Protection	605
2.2. The Rhine River Basin	605
2.3. Problems and Solutions	609
2.4. Managing Risk	609
2.4.1. Storage	610
2.4.2. Discharge-Increasing Measures	612
2.4.3. Green Rivers	614
2.4.4. Use of Existing Water Courses	615
2.4.5. The Overall Picture	615
2.5. Dealing With Uncertainties	615
2.6. Summary	617
3. Flood Management on the Mississippi	617
3.1. General History	619
3.2. Other Considerations	623
3.3. Interactions Among User Groups	624
3.4. Creating a Flood Management Strategy	626
3.5. The Role of the Government and NGOs	626

## Contents

4. Flood Risk Reduction 627	3. Analytical Framework: Phases of Analysis 652
4.1. Reservoir Flood Storage Capacity 627	4. Inception Phase 654
4.2. Channel Capacity 630	4.1. Initial Analysis 655
4.3. Estimating Risk of Levee Failures 631	4.1.1. Inventory of Characteristics, Developments and Policies 655
4.4. Annual Expected Damage From Levee Failure 633	4.1.2. Problem Analysis 655
4.4.1. Risk-Based Analyses 634	4.1.3. Objectives and Criteria 656
5. Decision Support and Prediction 635	4.1.4. Data Availability 656
5.1. Floodplain Modelling 636	4.2. Specification of the Approach 657
5.2. Integrated 1D–2D Modelling 637	4.2.1. Analysis Steps 657
6. Conclusions 638	4.2.2. Delineation of System 657
7. References 640	4.2.3. Computational Framework 658
<b>Appendix E: Project Planning and Analysis: Putting it All Together 644</b>	4.2.4. Analysis Conditions 659
1. Basic Concepts and Definitions 645	4.2.5. Work Plan 660
1.1. The Water Resources System 645	4.3. Inception Report 660
1.2. Functions of the Water Resources System 646	4.4. Communication with Decision-Makers and Stakeholders 661
1.2.1. Subsistence Functions 646	5. Development Phase 661
1.2.2. Commercial Functions 646	5.1. Model Development and Data Collection 661
1.2.3. Environmental Functions 647	5.1.1. Analysis of the Natural Resources System (NRS) 661
1.2.4. Ecological Values 647	5.1.2. Analysis of the Socio-Economic System (SES) 664
1.3. Policies, Strategies, Measures and Scenarios 647	5.1.3. Analysis of the Administrative and Institutional System (AIS) 666
1.4. Systems Analysis 648	5.1.4. Integration into a Computational Framework 667
2. Analytical Description of WRS 649	5.2. Preliminary Analysis 668
2.1. System Characteristics of the Natural Resources System 650	5.2.1. Base Case Analysis 669
2.1.1. System Boundaries 650	5.2.2. Bottleneck (Reference Case) Analysis 669
2.1.2. Physical, Chemical and Biological Characteristics 650	5.2.3. Identification and Screening of Measures 669
2.1.3. Control Variables: Possible Measures 651	5.2.4. Finalization of the Computational Framework 669
2.2. System Characteristics of the Socio-Economic System 651	6. Selection Phase 670
2.2.1. System Boundaries 651	6.1. Strategy Design and Impact Assessment 670
2.2.2. System Elements and System Parameters 651	6.2. Evaluation of Alternative Strategies 671
2.2.3. Control Variables: Possible Measures 652	6.3. Scenario and Sensitivity Analysis 672
2.3. System Characteristics of the Administrative and Institutional System 652	6.4. Presentation of Results 672
2.3.1. System Elements 652	7. Conclusions 672
2.3.2. Control Variables: Possible Measures 652	Index 677
