|-----------------------------------------------------------------------------------------------|------|
| Preface.....                                                                                  | ix   |
| Acknowledgments.....                                                                          | xi   |
| Author .....                                                                                  | xiii |
| <br>                                                                                          |      |
| <b>Chapter 1</b> Functional Groups in Biopolymers and Factors Influencing<br>Reactivity.....  | 1    |
| References .....                                                                              | 14   |
| <br>                                                                                          |      |
| <b>Chapter 2</b> Modification of Amino/Amidino Groups in Proteins .....                       | 25   |
| $\alpha$ -Amino Groups (N-Terminal Amino Groups).....                                         | 25   |
| Modification of Arginine .....                                                                | 74   |
| References .....                                                                              | 84   |
| <br>                                                                                          |      |
| <b>Chapter 3</b> Modification of Hydroxyl and Carboxyl Functional Groups<br>in Proteins ..... | 115  |
| Serine and Threonine.....                                                                     | 115  |
| Tyrosine .....                                                                                | 116  |
| Carboxyl Groups .....                                                                         | 140  |
| References .....                                                                              | 147  |
| <br>                                                                                          |      |
| <b>Chapter 4</b> Modification of Heterocyclic Amino Acids: Histidine<br>and Tryptophan .....  | 167  |
| Histidine .....                                                                               | 167  |
| Tryptophan .....                                                                              | 191  |
| References .....                                                                              | 201  |
| <br>                                                                                          |      |
| <b>Chapter 5</b> Modification of Sulfur-Containing Amino Acids in Proteins .....              | 215  |
| Cystine.....                                                                                  | 277  |
| Methionine .....                                                                              | 297  |
| References .....                                                                              | 303  |

|                    |                                               |     |
|--------------------|-----------------------------------------------|-----|
| <b>Chapter 6</b>   | Chemical Modification of Nucleic Acids .....  | 343 |
|                    | References .....                              | 368 |
| <b>Chapter 7</b>   | Chemical Modification of Polysaccharides..... | 383 |
|                    | References .....                              | 397 |
| <b>Index</b> ..... |                                               | 407 |
