

Polymer Thermodynamics

Blends, Copolymers and Reversible Polymerization

Kal Renganathan Sharma

Contents

Foreword	xiii
Preface.....	xv
About the Author	xix

Chapter 1	Introduction to Polymer Blends.....	1
	Learning Objectives.....	1
	1.1 History of Polymer Blends	2
	1.2 Flory–Huggin’s Solution Theory—and Beyond.....	4
	1.3 Miscible Polymer Blends.....	7
	1.4 Partially Miscible Polymer Blends	8
	1.5 Natural Polymers	9
	1.5.1 Primary Structure.....	10
	1.5.2 Secondary Structure.....	11
	1.5.3 Tertiary Structure.....	12
	1.5.4 Quaternary Structure.....	13
	1.6 Polymer Alloys	16
	1.7 Summary	18
	Exercises.....	20
	References	21

Chapter 2	Equation of State Theories for Polymers	23
	Learning Objectives.....	23
	2.1 Small Molecules and Large Molecules	23
	2.1.1 Kinetic Representation of Pressure	24
	2.1.2 Derivation of Ideal Gas Law	25
	2.1.3 Van der Waals Cubic Equation of State	27
	2.1.4 Virial Equation of State.....	28
	2.1.5 Redlich and Kwong Equation of State and Soave Modification	28
	2.2 PVT Relations for Polymeric Liquids	30
	2.3 Tait Equation	30
	2.4 Flory, Orwoll, and VRIJ (FOV) Model.....	32
	2.5 Prigogine Square-Well Cell Model	35
	2.6 Lattice Fluid Model of Sanchez and Lacombe.....	37
	2.7 Negative Coefficient of Thermal Expansion	44
	2.7.1 Historical Note	45
	2.7.2 Violation of Second Law of Thermodynamics	46

2.7.3	Proposed Isentropic Expansivity	47
2.7.4	Measurements of Volume Expansivity Not Isobaric	49
2.8	Summary	49
	Problems	50
	Review Questions	54
	References	55
Chapter 3	Binary Interaction Model	57
	Learning Objectives	57
3.1	Introduction	57
3.2	Compositional Window of Miscibility: Copolymer– Homopolymer	59
3.3	Compositional Window of Miscibility: Copolymers with Common Monomers	60
3.4	Compositional Window of Miscibility: Terpolymer System with Common Monomers	62
3.5	Compositional Window of Miscibility: Terpolymer and Homopolymer System without Common Monomers	64
3.6	Spinodal Curve from B Values and EOS	65
3.7	Copolymer/Homopolymer Blends of AMS–AN/PVC	67
3.8	Copolymer/Homopolymer Blends of AMS–AN with Other Copolymers	68
3.9	Intramolecular Repulsion as Driving Force for Miscibility–Mean Field Approach	75
3.10	Summary	80
	Exercises	81
	Problems	82
	References	85
Chapter 4	Keesom Forces and Group Solubility Parameter Approach	87
	Learning Objectives	87
4.1	Hildebrandt Solubility Parameter	87
4.2	Hansen Three-Dimensional Solubility Parameter	89
4.3	Specific Interactions	89
4.3.1	Experimental Determination of Equilibrium Rate Constants	94
4.3.2	Phase Behavior of Miscible Blends with Keesom Interactions	95
4.4	Summary	98
	Exercises	99
	Review Questions	103
	References	104

Chapter 5	Phase Behavior	105
	Learning Objectives.....	105
5.1	Introduction	105
5.2	LCST and UCST	108
5.2.1	Case I LCST	108
5.2.2	Case II UCST	108
5.3	Circular Envelope in Phase Diagram	110
5.3.1	Case III Circular Phase Envelope UCST and LCST	110
5.3.2	Case IV Circular Phase Envelope LCST and UCST.....	110
5.4	Hourglass Behavior in Phase Diagrams	114
5.4.1	Case V LCST and UCST Hourglass Behavior.....	114
5.5	Molecular Architecture	116
5.6	Summary	119
	Exercises.....	120
	Problems.....	121
	References	122
Chapter 6	Partially Miscible Blends	123
	Learning Objectives.....	123
6.1	Commercial Blends That Are Partially Miscible.....	124
6.2	Entropy Difference Model ($\Delta\Delta S_m$).....	124
6.3	Estimates of Change in Entropy of Mixing at Glass Transition, $\Delta\Delta S_m$	129
6.4	Copolymer and Homopolymer Blend.....	131
6.5	Sequence Distribution Effects on Miscibility	134
6.6	Summary	137
	Nomenclature	138
	Subscripts	139
	Superscripts	139
	Greek	139
	Exercises.....	139
	References	140
Chapter 7	Polymer Nanocomposites	143
	Learning Objectives.....	143
7.1	Introduction	143
7.2	Commercial Products	143
7.3	Thermodynamic Stability.....	144
7.4	Vision and Realities.....	145
7.5	Fullerenes	145
7.6	Carbon Nanotubes (CNTs).....	147

7.7	Morphology of CNTs	148
7.8	Nanostructuring Operations	151
7.9	Polymer Thin Films	153
7.10	Nanostructuring from Self-Assembly of Block Copolymers	154
7.11	Intercalated and Exfoliated Nanocomposites	155
7.12	Summary	162
	Exercises	163
	References	165
Chapter 8	Polymer Alloys	167
	Learning Objectives	167
8.1	Introduction	167
8.2	PC/ABS Alloys	168
8.3	Nylon/ABS Alloys	170
8.4	PVC Alloys	171
8.5	Polyolefin Alloys	173
8.6	Natural Polymer Alloy	174
8.7	Summary	176
	Exercises	177
	References	177
Chapter 9	Binary Diffusion in Polymer Blends	179
	Learning Objectives	179
9.1	Introduction	179
9.2	Diffusion Phenomena	180
9.3	Fick's First and Second Laws of Diffusion	181
9.4	Skylab Diffusion Demonstration Experiments	183
9.5	Bulk Motion, Molecular Motion, and Total Molar Flux	184
9.6	Stokes–Einstein Equation for Dilute Solutions	186
	9.6.1 Diffusion in Concentrated Solutions	190
9.7	Diffusion in Solids	191
	9.7.1 Mechanisms of Diffusion	191
	9.7.2 Diffusion in Porous Solids	193
9.8	Diffusion Coefficients in Polymers	194
9.9	Transient Diffusion	195
	9.9.1 Fick Molecular Diffusion—Semi-Infinite Medium	196
9.10	Damped Wave Diffusion and Relaxation	198
9.11	Periodic Boundary Condition	205
9.12	Summary	208
	Problems	209
	Review Questions	215
	References	216

Chapter 10	Copolymer Composition	219
	Learning Objectives	219
	10.1 Introduction	219
	10.2 Composition for Random Copolymers	221
	10.3 Composition of Random Terpolymers	224
	10.4 Reactivity Ratios	227
	10.5 Multicomponent Copolymerization— n Monomers	229
	10.6 Summary	239
	Problems	239
	Review Questions	240
	References	241
Chapter 11	Sequence Distribution of Copolymers	243
	Learning Objectives	243
	11.1 Dyad and Triad Probabilities in Copolymer	243
	11.2 Dyad and Triad Probabilities in Terpolymers	249
	11.3 Sequence Alignment in DNA and Protein Sequences	259
	11.3.1 Global Alignment of a Pair of Sequences	261
	11.3.1.1 Algorithm 1 Global Alignment	262
	11.3.2 Dynamic Programming	265
	11.3.3 Analysis of Time and Space Efficiency	266
	11.3.4 $O(n)$ Space Solution by Dynamic Array	266
	11.3.5 Subquadratic Algorithms for Longest Common Subsequence	266
	11.3.5.1 Algorithm 2: Length of Longest Increasing Subsequence	267
	11.3.5.2 Algorithm 3: Find and Print the Longest Common Subsequence of S and T	267
	11.3.6 Greedy Algorithms for Pairwise Alignment	268
	11.3.6.1 Algorithm 4: Tool for Aligning Very Similar DNA Sequences	269
	11.3.7 Other Methods for Pairwise Alignment	271
	11.3.8 Grading Functions during Global Alignment	271
	11.4 Summary	274
	Problems	275
	Review Questions	282
	References	283
Chapter 12	Reversible Polymerization	285
	Learning Objectives	285
	12.1 Heat Effects during Polymerization	286
	12.2 Ceiling Temperature during Reversible Polymerization	290
	12.3 Subcritical Oscillations during Thermal Polymerization	294

12.3.1	Thermal Initiation by Diels–Alder Dimerization	295
12.3.2	Four Reactions in a Circle	299
12.3.3	General Case of n Reactions in Circle	300
12.4	Thermal Terpolymerization of Alphamethyl-Styrene, Acrylonitrile, and Styrene	300
12.4.1	Experimental	301
12.4.2	Results	302
12.5	Reversible Copolymerization	304
12.5.1	Copolymer Composition	304
12.5.2	Heat of Copolymerization	308
12.6	Summary	309
	Problems	311
	Review Questions	313
	References	313
Appendix A: Maxwell's Relations		315
Appendix B: Five Laws of Thermodynamics		319
Appendix C: Glass Transition Temperature.....		331
Appendix D: Statistical Distributions		335
