

MATERIALS AND ENERGY – Vol. 1

HANDBOOK OF INSTRUMENTATION AND TECHNIQUES FOR SEMICONDUCTOR NANOSTRUCTURE CHARACTERIZATION

Editors

Richard Haight • Frances M Ross • James B Hannon

with Foreword by Leonard C. Feldman

 **World Scientific**

CONTENTS

Foreword	xvii
Introduction	xxi

VOLUME 1

ELECTRON MICROSCOPIES

1. Characterization of Semiconductor Nanostructures by Scanning Electron Microscopy <i>Lynne M. Gignac and Oliver C. Wells</i>	1
1.1. Introduction	3
1.2. SEM Instrumentation	4
1.2.1. Electron Sources	6
1.2.2. Electron Lenses	8
1.2.3. Electron Detectors	11
1.2.4. Beam Deceleration/Sample Bias	15
1.2.5. Aberration Correction	16
1.2.6. Focused Ion Beam Systems	20
1.3. Practical Examples	22
1.3.1. Imaging with Low Incident Beam Energy	22
1.3.2. Electron Beam Induced Sample Damage	23
1.3.3. Use of Sample Bias/Beam Deceleration	24
1.3.4. Use of a Source Monochromator	26
1.3.5. Secondary Electron Detectors	28

1.3.6.	Use of STEM Detector	31
1.3.7.	Imaging with High Incident Beam Energy	32
1.4.	Conclusions	39
	References	40
2.	Transmission Electron Microscopy and Ultra-high Vacuum Transmission Electron Microscopy of Semiconductor Nanostructures	43
	<i>Suneel Kodambaka and Frances M. Ross</i>	
2.1.	Introduction to TEM and UHV TEM	44
2.2.	TEM of Semiconductor Nanostructures	46
2.2.1.	Sample Preparation	46
2.2.1.1.	Freestanding nanostructures	47
2.2.1.2.	Embedded or Epitaxial nanostructures	48
2.2.2.	High Resolution Imaging: Local Structure, Strain and Composition	51
2.2.3.	Bright Field and Dark Field Imaging: Strain Fields and Dislocations	54
2.2.4.	Analytical TEM: Composition and Bonding Within Nanostructures	57
2.2.5.	<i>In situ</i> TEM: Electrical, Mechanical and Growth Measurements Nanostructures	59
2.2.6.	Some Issues to Consider for TEM	61
2.3.	Ultra-High Vacuum Transmission Electron Microscopy	63
2.3.1.	Experimental Aspects of UHV TEM	63
2.3.1.1.	Microscope design	64
2.3.1.2.	Sample preparation	66
2.3.1.3.	Some issues to consider for UHV TEM	67
2.3.2.	Plan View Bright and Dark Field Imaging: Ge Quantum Dot Growth on Si(001)	68
2.3.3.	Reflection Mode Imaging: Si and Ge Nanowire Growth	71

2.3.3.1.	Extending the range of nanowire growth experiments	74
2.3.3.2.	Electrical measurements in UHV TEM	74
2.3.4.	Plan View Imaging and Diffraction: Thin Film Silicide Reactions	75
2.3.5.	Plan View Imaging and Diffraction: Silicide Islands	77
2.3.5.1.	Compact silicide islands	77
2.3.5.2.	Silicide nanowires	79
2.3.6.	Bright Field, Dark Field and High Resolution Imaging: Nanoscale Phase Transitions	81
2.4.	Summary and Outlook	82
	References	84
3.	Aberration Corrected Electron Microscopy	89
	<i>Philip E. Batson</i>	
3.1.	Introduction	89
3.2.	Multipole Correction for the STEM	95
3.3.	Measurement and Control of Aberration Optics	98
3.4.	Stability Improvements Needed to Make Aberration Correction Successful	101
3.5.	Aberration Nomenclature and Probe Properties	105
3.6.	Improvement in Images of Semiconductors	107
3.7.	New Capability Enabled by Aberration Correction	112
3.8.	Next Generation Equipment	120
3.9.	Conclusions	122
	References	122
4.	Low-Energy Electron Microscopy for Nanoscale Characterization	127
	<i>James B. Hannon and Rudolf M. Tromp</i>	
4.1.	Introduction	128
4.2.	LEEM/PEEM Instrumentation	129
4.2.1.	The Cathode Objective Lens and Limit Resolution	129

4.2.2.	A Simple PEEM Instrument	134
4.2.3.	A "Simple" LEEM Instrument	138
4.2.4.	Energy Filtered LEEM/PEEM	143
4.2.5.	Aberration Correction	149
4.2.6.	Further Developments	151
4.3.	Applications of LEEM	153
4.3.1.	LEEM Contrast	153
4.3.2.	Selected Area Diffraction	157
4.3.3.	Dark-field Imaging	159
4.3.4.	Quantitative LEED Analysis	162
4.3.5.	Quantum Well States	164
4.3.6.	Fingerprinting	166
4.3.7.	Quantitative LEED at the Nanoscale	167
4.3.8.	Inelastic Imaging in LEEM	173
4.4.	Conclusion	177
	References	179
5.	Ultrafast Microscopy of Plasmon Dynamics in Nanostructured Metal Surfaces	183
	<i>Hrvoje Petek and Atsushi Kubo</i>	
5.1.	Introduction	184
5.2.	Ultrafast Multidimensional Microscopy	185
5.2.1.	Laser Pump-Electron Probe Methods	185
5.2.2.	Laser Pump-Probe Photoelectron Imaging Methods	187
5.2.3.	Interferometric Time-Resolved Photoemission Electron Microscopy	188
5.3.	ITR-PEEM Measurements	191
5.3.1.	Ultrafast Imaging of Plasmonic Phenomena	191
5.3.1.1.	Localized surface plasmons	192
5.3.1.2.	Surface plasmon polaritons	193
5.3.1.3.	Imaging of plasmonic excitations	194
5.3.2.	Ultrafast ITR-PEEM Imaging of Localized Surface Plasmon Modes	196
5.3.2.1.	Imaging of plasmonic hot-spots	196
5.3.2.2.	ITR-PEEM imaging of SP dephasing	199

5.3.3.	Ultrafast ITR-PEEM Imaging of Surface Plasmon Polaritons	200
5.4.	Conclusions and Outlook	206
	References	207
6.	X-ray Diffraction Methods for Studying Strain and Composition in Epitaxial Nanostructured Systems	211
	<i>Angelo Malachias, Raul Freitas, Sérgio L. Morelhão, Rogério Magalhães-Paniago, Stefan Kycia and Gilberto Medeiros-Ribeiro</i>	
6.1.	Introduction	212
6.2.	Atomic Scattering Factor and Anomalous Diffraction	214
6.2.1.	Atomic Form Factor	215
6.2.2.	Anomalous (Resonant) X-ray Scattering	216
6.3.	Form Factor of a Small Crystal	220
6.4.	Structure Factor	222
6.5.	Coplanar and Grazing-Incidence Diffraction	225
6.6.	Bragg-Surface Diffraction	230
6.7.	Evaluation of Strain in Nanostructures	233
6.7.1.	Polar Diagrams and Sample Preparation Procedures	233
6.7.2.	Uncapped Nanostructures	235
6.7.2.1.	The Ge:Si(001) system	235
6.7.2.2.	In-plane strain analysis	237
6.7.2.3.	Pseudomorphic relaxation	241
6.7.3.	Capped Nanostructures	245
6.7.3.1.	Renninger scanning and three-dimensional lattice parameter determination	245
6.7.3.2.	BSD mesh-scans and capping process defects	251
6.8.	Chemical Composition Analysis by Anomalous X-ray Diffraction	254
6.8.1.	Composition in Two-Element Systems	254
6.8.2.	Complementary Anomalous X-ray Diffraction — InP:GaAs(001)	257

6.8.3.	Three-Dimensional Composition in Uncapped Islands	266
6.9.	Addressing Elastic, Thermodynamical and Growth Properties	272
6.10.	Conclusions	275
	References	276
7.	Stress Determination in Semiconductor Nanostructures Using X-ray Diffraction	281
	<i>Conal E. Murray and I. Cevdet Noyan</i>	
7.1.	Introduction	282
7.2.	Basic X-ray Analysis Techniques	284
7.2.1.	X-ray Diffraction	284
7.2.2.	Kinematical Diffraction Theory	284
7.2.3.	Strain	287
7.2.4.	Effect of Sample Heterogeneity	288
7.3.	Information Volume of X-ray Techniques	291
7.4.	Focusing of X-rays	292
7.4.1.	Refractive Optics	293
7.4.2.	Reflective Optics	294
7.4.2A.	Capillary Optics	294
7.4.2B.	X-ray Mirrors	294
7.4.3.	Diffraction Optics	295
7.4.3A.	Fresnel Zone-Plates	295
7.5.	Applications	295
7.5.1.	Experimental Considerations	296
7.5.2.	Silicon-on-insulator (SOI) Structures	297
7.5.2A	Measurement of SOI Channel Strain Induced by Embedded Stressor Materials	298
7.5.2B	SOI Strain Distributions Generated by Overlying Stressor Materials	303
7.5.3.	Topographic Studies	307
7.5.3A	SiGe Features on Si(001)	307
7.6.	Conclusions	311
	References	311

VOLUME 2

SCANNING PROBES

8. An Introduction to Scanning Probe Microscopy of Semiconductors with Case Studies Concerning Gallium Nitride and Related Materials	313
<i>Rachel Oliver</i>	
8.1. Introduction	314
8.2. Scanning Tunneling Microscopy	316
8.2.1. Basic Principles of Scanning Tunneling Microscopy	316
8.2.2. Some Practical Considerations in STM	319
8.2.3. Surface Reconstructions	322
8.2.4. Cross-Sectional STM Imaging	325
8.3. Atomic Force Microscopy	325
8.3.1. Basic Principles of AFM	325
8.3.2. Topographic Resolution of AFM	328
8.3.3. AFM-Based Techniques for the Electrical Characterization of Semiconductors at the Micro- and Nano-scale	331
8.3.3.1. Scanning capacitance microscopy	331
8.3.3.2. Scanning spreading resistance microscopy	332
8.3.3.3. Kelvin probe force microscopy	333
8.4. Case Study 1: Scanning Tunneling Microscopy of GaN(0001) Surfaces	335
8.4.1. STM Observations of Reconstructions of the GaN(0001) Surface	336
8.4.2. Insights into GaN(0001) Surface Reconstructions from Atomistic Modeling	339
8.5. Case Study 2: Topographic Atomic Force Microscopy Studies of Nanoscale Network Structures in InGaN	343
8.5.1. Sample Description	343

8.5.2.	Complementary AFM, TEM and APT Analysis of Nanoscale Network Structures in InGaN	344
8.5.3.	More Advanced Analysis of AFM Data from Network Structures: Power Spectral Density Functions	346
8.6.	Case Study 3: Scanning Capacitance Microscopy of Unintentional Doping in GaN	354
8.6.1.	Sample Description	354
8.6.2.	SCM Data on a Test Sample	356
8.6.3.	Quantification of SCM Data from Unintentionally-Doped Material	358
8.6.4.	Application of SCM in Understanding Facet-Dependent Dopant Incorporation	359
8.7.	Concluding Remarks	363
	References	365
9.	STM of Self Assembled III–V Nanostructures	369
	<i>Vaishno D. Dasika and Rachel S. Goldman</i>	
9.1.	Introduction	370
9.2.	Cross-Sectional Scanning Tunneling Microscopy (XSTM) and Scanning Tunneling Spectroscopy (STS)	374
9.2.1.	Cross-sectional Scanning Tunneling Microscopy (XSTM)	374
9.2.2.	Scanning Tunneling Spectroscopy (STS)	377
9.2.3.	Variable Separation STS: Experimental Steps and Analysis	377
9.2.4.	Tip-Induced Band Bending	379
9.3.	Design of Heterostructures for XSTM	381
9.4.	Influence of Alloy Layers on QD Size and Distribution	382
9.4.1.	QD Dimensions, Density, and WL Thickness	383
9.4.2.	Mechanism for Dot Formation and Collapse	385
9.5.	Quantum Dot and Wetting Layer Electronic States	388
9.5.1.	Uncoupled QD Electronic States	388
9.5.2.	Wetting Layer Electronic States	392

9.6.	Influence of Mn Dopants on InAs/GaAs Quantum Dot Electronic States	394
9.6.1.	Doped QD Electronic States: XSTM and STS	394
9.6.2.	LDOS calculations	397
9.7.	Summary and Conclusions	399
9.7.1.	Influence of Alloy Layers on QD Size and Distribution	400
9.7.2.	Quantum Dot Electronic States	400
9.7.3.	Influence of Dopants on Quantum Dot Electronic States	401
	References	401

ATOM AND OPTICAL PROBES

10.	Atom Probe Tomography for Microelectronics	407
	<i>David J. Larson, Ty J. Prosa, Dan Lawrence, Brian P. Geiser, Clive M. Jones and Thomas F. Kelly</i>	
10.1.	Introduction	408
10.2.	Atom Probe Tomography Overview	411
10.2.1.	Origins	411
10.2.2.	Atom Probe Operation	412
10.2.3.	Laser-Pulsed Atom Probe	413
10.2.4.	Instrumentation	415
10.2.5.	Sensitivity	417
10.3.	Spatial Reconstruction in Atom Probe Tomography	418
10.3.1.	Overview	418
10.3.2.	Spatial Resolution	419
10.3.3.	Imperfections in Spatial Positioning	421
10.3.4.	Development Directions for APT Reconstruction	426
	10.3.4.1. The role of simulations	426
	10.3.4.2. Longer-term outlook	428
10.4.	Specimen Preparation	430
10.4.1.	Overview	430
10.4.2.	Capping Methods	431

10.4.3.	Standard Lift-Out Process	433
10.4.4.	Sharpening Process	436
10.4.5.	FIB Deprocessing	438
10.4.6.	Chemical Deprocessing	439
10.4.7.	Cross-Section and Backside Orientations	440
10.4.7.1.	Cross-section preparation	442
10.4.7.2.	Backside preparation	443
10.4.8.	Hybrid TEM/APT Preparation	444
10.4.9.	Applications	445
10.4.10.	Precision and Accuracy	446
10.5.	Segregation in Silicon	450
10.6.	Silicides	454
10.7.	High- κ Dielectrics	458
10.8.	Compound Semiconductors: Quantum Wells and Quantum Rings	460
10.9.	Nanowires	462
10.10.	Electrically Insulating and Ceramic Materials	464
10.11.	Device Structures	467
10.12.	Concluding Remarks	469
	References	470
11.	Raman Spectroscopy of Carbon Nanotubes and Graphene Materials and Devices <i>Marcus Freitag and James C. Tsang</i>	479
11.1.	Introduction	480
11.2.	Raman Scattering from Carbon Nanotubes and Graphene	482
11.2.1.	Raman Scattering	483
11.2.2.	Raman Spectra of Planar Carbon Systems	485
11.3.	Perturbations of the Raman Phonon Frequencies	491
11.3.1.	Doping Effects	492
11.3.2.	Temperature	492
11.3.3.	Strain	495
11.3.4.	Disorder	495
11.4.	Measurements of Intensities of Symmetry Allowed Raman Lines	497

11.4.1.	Interference Enhancements of Raman Scattering Intensities	501
11.5.	Interface and Resonant Raman Effects	504
11.6.	Materials Identification	510
11.6.1.	Determination of the Layer Number in Few-Layer Graphene	510
11.7.	Device Characterization	513
11.7.1.	Temperature Measurements in Biased Devices	513
11.7.2.	Hot Carrier Effects, Non-Equilibrium Phonon Distributions	514
11.7.3.	Charge Density in Biased Carbon Nanotube Field-Effect Transistors	517
11.8.	Conclusion	518
	References	522
12.	Single Nanowire Photoelectron Spectroscopy	525
	<i>Carlos Aguilar and Richard Haight</i>	
12.1.	Introduction	526
12.2.	Single NW Photoemission Fundamentals	528
12.2.1.	Electron Escape Depth	530
12.2.2.	Nanowire Deposition	532
12.2.3.	Femtosecond Laser System and Electron Detection	536
12.3.	Si and Ge NWs	538
12.3.1.	Photoelectron Spectroscopy	538
12.3.2.	Light Scattering from Nanowires	542
12.4.	Doping of Single Si NWs	545
12.4.1.	Shell Doping of Nanowires with Boron	547
12.5.	Al Catalyzed Nanowire Growth and Doping	549
12.6.	Control of the Electronic Properties of Si NWs Using Functional Molecular Groups	554
12.6.1.	Theoretical Model	562
12.7.	Carbon Nanotubes	565
12.8.	Zinc Oxide NWs	569
12.8.1.	Basics	569
12.8.2.	Oxygen Vacancies	572

12.8.3. Surface Fuctionalization	576
12.9. Conclusions	581
References	582
13. Time-Domain Thermoreflectance Measurements for Thermal Property Characterization of Nanostructures	587
<i>Scott T. Huxtable</i>	
13.1. Introduction and Background	587
13.2. Basic Principles of Time-Domain Thermoreflectance (TDTR)	589
13.2.1. Typical TDTR Experimental Apparatus	589
13.2.1.1. Exclusion of diffusely scattered light from the pump beam	593
13.2.1.2. Additional experimental details	595
13.2.2. Data Analysis	597
13.2.2.1. Sensitivity analysis	598
13.3. Examples of TDTR Applications	602
13.3.1. Measurement Techniques Closely Related to TDTR	604
13.4. Summary and Outlook	607
References	608
