

Nduka Okafor

Environmental Microbiology of Aquatic and Waste Systems

 Springer

Contents

Part I Introduction

1 Nature, Properties, and Distribution of Water	3
1.1 Physical and Chemical Properties of Water and Their Consequences.....	3
1.1.1 Molecular Structure of Water and Its Strong Surface Tension.....	3
1.1.2 The High Surface Tension of Water and Capillarity in Plants.....	4
1.1.3 The Three Physical States of Water, and the Floatation of Ice.....	4
1.1.4 The Thermal Properties of Water and Their Effect on Climate.....	5
1.1.5 The Change in the Nature of Water at Different Temperatures and Lake Temperatures.....	5
1.1.6 The Low Electrical Conductivity of Pure Water.....	6
1.1.7 The High Chemical Reactiveness of Water.....	7
1.1.8 The pH of Water.....	7
1.1.9 The High Solvent Power of Water.....	7
1.2 Importance and Uses of Water.....	7
1.2.1 Composition of Biological Objects.....	7
1.2.2 Drinking by Man and Animals and Domestic Use.....	7
1.2.3 Irrigation and Aquaculture.....	8
1.2.4 Power Generation.....	8
1.2.5 Transportation.....	8
1.2.6 Recreation.....	8
1.2.7 Human Affairs.....	8
1.3 The Hydrologic Cycle.....	8
1.4 Classification of Waters.....	9
1.4.1 Natural Waters.....	9
1.4.2 Artificial Waters.....	10
1.5 Global Distribution of Water on Earth and Its Study.....	10
References.....	12
2 Peculiarities of Water as an Environmental Habitat for Microorganisms	15
2.1 The Peculiar Nature of Water as an Environment for Microbial Habitation.....	15

2.2	Ecological Habitats of Microorganisms in Aquatic Environments	17
2.3	Foreign Versus Indigenous Aquatic Bacteria	17
2.4	Challenges of Aquatic Life: Factors Affecting the Microbial Population in Natural Waters	18
2.5	Methods for the Enumeration of Microorganisms in the Aquatic Environment	20
2.5.1	Cultural Methods.....	20
2.5.2	Direct Methods.....	22
2.5.2.1	Light Microscopy	22
2.5.2.2	Electron Microscopy	27
2.5.2.3	Flow Cytometry.....	27
2.5.3	Determination of Bacterial Mass	29
2.5.3.1	Direct Methods.....	29
2.5.3.2	Indirect Methods.....	29
	References.....	29

Part II Biological Aspects of Microorganisms in Aquatic Environments

3 Aspects of the Molecular Biology of Microorganisms

	of Relevance to the Aquatic Environment	33
3.1	Protein Synthesis.....	33
3.1.1	Transcription	35
3.1.2	Translation.....	35
3.2	The Polymerase Chain Reaction.....	37
3.2.1	Some Applications of PCR in Environmental Biotechnology	38
3.3	Microarrays	38
3.3.1	Applications of Microarray Technology	40
3.4	Sequencing of DNA	41
3.4.1	Sequencing of Short DNA Fragments.....	41
3.4.2	Sequencing of Genomes or Large DNA Fragments.....	42
3.4.2.1	Use of Bacterial Artificial Chromosomes	42
3.4.2.2	Use of the Shotgun Approach	42
3.5	The Open Reading Frame and the Identification of Genes	42
3.6	Metagenomics	44
	References.....	45

4	Taxonomy, Physiology, and Ecology of Aquatic Microorganisms	47
4.1	Taxonomy of Microorganisms in Aquatic Environments.....	47
4.1.1	Nature of Modern Taxonomy	47
4.1.2	Evolution of the Classification of Living Things.....	48
4.1.3	Determining Taxonomic Groups Within Domains.....	48
4.1.3.1	Definition of Species.....	50
4.1.3.2	Nomenclature of Biological Objects	51
4.1.3.3	Criteria and Methods for the Identification and Classification of Bacteria and Archae: Morphological, Physiological, Nucleic Acid, and Chemical Properties.....	51

4.1.4	Bacteria.....	57
4.1.4.1	Taxonomic Groups Among Bacteria	57
4.1.4.2	Aspects of the Physiology and Ecology of Microorganisms in the Aquatic Environment.....	65
4.1.5	Archae.....	75
4.1.5.1	General Properties of Archaea.....	75
4.1.5.2	Taxonomic Groups Among Archeae	76
4.1.6	Microbial Taxonomic Groups Among Eucharia.....	78
4.1.6.1	Protozoa	78
4.1.6.2	Fungi.....	80
4.1.6.3	Algae.....	82
4.1.7	Viruses	84
4.1.7.1	Viral Taxonomy and Nomenclature.....	86
4.1.7.2	The Viral Groups	87
4.1.7.3	Bacteriophages in the Aquatic Environment	90
4.1.8	Small Multicellular Macroorganisms in Aquatic Systems	97
4.1.8.1	Crustaceans (Including Rotifers).....	104
4.1.8.2	Nematodes	104
	References.....	106

Part III The Ecology of Microorganisms in Natural Waters

5	Ecology of Microorganisms in Freshwater	111
5.1	Microbial Ecology of Atmospheric Waters	111
5.2	Microbial Ecology of Surface Waters.....	112
5.2.1	Rivers and Streams	112
5.2.2	Lakes and Ponds	112
5.2.3	Wetlands.....	112
5.3	Ground Waters	114
5.4	Some Microorganisms Usually Encountered in Fresh Water.....	116
5.4.1	Bacteria.....	116
5.4.1.1	New Data Regarding Freshwater Bacteria.....	116
5.4.1.2	Some Bacteria in Freshwater	118
5.4.2	Fungi.....	118
5.4.3	Algae.....	119
5.4.4	Protozoa.....	119
5.5	Succession of Organisms in the Breakdown Materials Added to Aquatic Systems	119
5.5.1	The Physiological Basis of Aquatic Microbial Ecology	119
5.6	Microbial Loop and the Food Web in a Freshwater System.....	121
	References.....	122
6	Ecology of Microorganisms in Saline Waters (Seas and Oceans).....	123
6.1	The Ocean Environment	123
6.2	Some Properties of Sea Water	127
6.2.1	Salinity	127
6.2.2	Temperature	128

6.2.3	Light.....	129
6.2.4	Nutrients	130
6.2.5	Oxygen and CO ₂ in the Marine Environment.....	130
6.2.6	Sea Sediments.....	130
6.3	Microbial Ecology of the Seas and Oceans	130
6.3.1	Bacteria.....	130
6.3.2	Archae.....	133
6.3.3	Fungi.....	133
6.3.4	Algae.....	133
6.3.5	Protozoa	135
6.3.6	Viruses.....	136
6.3.7	Plankton	136
6.4	Unique Aspects of the Existence of Microorganisms in the Marine Environment.....	137
6.4.1	Low Temperature	137
6.4.2	High Pressure.....	138
6.4.3	Oxygen.....	138
6.4.4	Food/Nutrients	138
6.4.5	Light.....	138
6.4.6	High Temperature	139
6.4.7	Size in Marine Microorganisms.....	139
6.5	The Place of Microorganisms in the Food Chains of the Oceans and Seas	139
6.6	Marine Microorganisms and Their Influence on Global Climate and Global Nutrient Recycling	141
6.6.1	The Influence of Marine Microorganisms on Global Climate and Global Nutrient Recycling.....	141
6.6.1.1	Global Marine Algal Sulfur Recycling, Dimethylsulfoniopropionate, Dimethyl Sulfide and Climate Change.....	142
6.6.1.2	Carbon Recycling by Marine Algae and Reduction of Global Warming.....	144
6.6.1.3	Marine Microorganisms and the Nitrogen Economy of Seas and Oceans.....	145
6.6.1.4	The Global C:N:P Marine Ratio and Its Maintenance Through Microbial Activity: The Redfield Ratio.....	147
	References.....	148

Part IV Pollution and Purification of, and Disease Transmission in, Water

7	Pollution of Aquatic Systems: Pollution Through Eutrophication, Fecal Materials, and Oil Spills.....	151
7.1	Nature of Pollution	151
7.1.1	The Concept of the Self-purification of Water as Basis for the Understanding of Pollution	152
7.1.2	Definition of Pollution	153
7.1.3	Kinds of Pollutants	154

7.1.4	Pollution by Eutrophication.....	154
7.1.4.1	“Algal Blooms” and Eutrophication	155
7.1.5	Biological Indicators of Pollution by Eutrophication.....	156
7.2	Pollution of Water with Reference to Human Health: Bacterial Indicators of Fecal Pollution	157
7.2.1	Microbiological Examination of Water for Fecal Contamination	157
7.2.1.1	Principle of Indicator Organisms.....	158
7.2.1.2	Procedure for the Determination of Fecal Contamination.....	159
7.2.1.3	Methods Used in the Enumeration of Indicator Organisms in Water.....	160
7.2.1.4	Standard Water Analysis.....	165
7.2.1.5	Total Maximum Daily Loads and Microbial Source Tracking in Water Pollution.....	165
7.3	Pollution by Petroleum in Oceans and Seas: Role of Microorganisms in Oil Degradation and Remediation.....	173
7.3.1	Composition of Crude Oil	173
7.3.1.1	Categorization of Crude Petroleum	173
7.3.2	Oil Spills	177
7.3.2.1	Behavior of Oil in an Oil Spill.....	178
7.3.2.2	Remediation of Oil Spills	183
	References.....	186
8	Disease Transmission in Water	189
8.1	Disease Transmission Through Drinking Water.....	189
8.1.1	Communicable Diseases Transmitted Through Drinking Water.....	190
8.1.2	Disease Outbreaks in Drinking Water Due to the Presence of Chemicals, and Biotoxins.....	193
8.1.2.1	Brief Notes on Some Water-Borne Diseases	193
8.2	Disease Transmission in Recreational Waters	200
8.2.1	Disease Transmission in Recreational Waters Through Fecal Material	201
8.2.1.1	Fecal Bacteria Which Have Caused Disease Outbreaks in Recreational Waters.....	201
8.2.1.2	Fecal Protozoa Which Have Caused Disease Outbreaks in Recreational Waters.....	201
8.2.1.3	Fecal Viruses Which Have Caused Disease Outbreaks in Recreational Waters.....	202
8.2.2	Disease Transmission in Recreational Water Through Non-fecal Material	202
8.2.2.1	Disease Transmission by Bacteria in Recreational Water Through Non-fecal Material.....	202
8.2.2.2	Disease Transmission by Viruses in Recreational Water Through Non-fecal Material.....	206

8.2.2.3	Disease Transmission by Protozoa in Recreational Water Through Non-fecal Material.....	207
8.2.2.4	Disease Transmission by Fungi in Recreational Water Through Non-fecal Material: <i>Trichophyton</i> spp. and <i>Epidermophyton</i> <i>floccosum</i>	208
8.3	Disease Transmission Through Shellfish Growing in Fecally Contaminated Water	208
8.3.1	Description of Shellfish	208
8.3.2	Monitoring the Aquatic Environment of Shellfish Growth.....	209
8.3.2.1	Procedure for Monitoring Shellfish Growing Areas in the US.....	210
8.4	Recent Developments Regarding Knowledge of Pathogens in Drinking Water	211
	References.....	213
9	Municipal Purification of Water	215
9.1	The Need for Water Purification.....	215
9.2	The Quality of the Raw Water to Be Purified.....	216
9.3	Processes for the Municipal Purification of Water	217
9.3.1	Pretreatments	217
9.3.2	Storage and Sedimentation Without Coagulation.....	218
9.3.3	Aeration	218
9.3.4	Coagulation and Flocculation	219
9.3.5	Sedimentation	220
9.3.6	Filtration	220
9.3.7	Chlorination (and Other Methods of) Disinfection	221
9.3.7.1	Reactions of Chlorine with Chemicals Found in Water.....	222
9.3.7.2	The Present Practice of Water Chlorination	224
9.3.7.3	Mode of Action of Chlorine Disinfection.....	225
9.3.7.4	Factors Affecting the Efficacy of Disinfection in Water by Chlorine (and the other Halogens) ..	225
9.3.7.5	Tests for Chlorine in Water	226
9.3.7.6	Alternative Methods of Disinfection Besides Chlorine and Other Halogens	227
9.3.7.7	Ozone.....	227
9.3.8	Ultraviolet Light	229
9.3.8.1	Mode of Action and Use of UV.....	229
9.3.9	Iron and Manganese Control	229
9.3.10	Softening of Water	230
9.3.11	Fluoridation.....	230
9.3.12	Algae Control (and Control of Taste and Odors).....	231
9.3.12.1	Methods for the Control of Algae and Taste and Odor.....	231
9.3.13	Color and Turbidity Removal	231

9.3.14	Miscellaneous Treatments Water Purification	231
9.3.14.1	Plumbosolvency Removal.....	231
9.3.14.2	Radium (Radioactivity) Removal	232
9.3.14.3	Reverse Osmosis	232
9.3.14.4	Ion Exchange	232
9.3.14.5	Electrodeionization	232
9.4	Purification of Bottled Water	233
9.5	Standards Required of Water	233
9.5.1	Standards Required for Drinking Water	233
9.5.1.1	The Microbiological Standards	235
9.5.1.2	Turbidity	235
9.5.1.3	Chemical Standards	243
9.5.2	Standards Required for Recreational Waters	243
9.5.3	Standards Required for Shellfish Harvesting Waters	244
	References.....	245

Part V Waste Disposal in Aquatic and Solid Media

10	Waste Disposal in the Aqueous Medium: Sewage Disposal	249
10.1	Nature of Wastes.....	249
10.2	Methods for the Determination of Organic Matter Content in Sewage and Wastewaters	250
10.2.1	Determination of Dissolved Oxygen	250
10.2.1.1	The Biological or Biochemical Oxygen Demand Test.....	250
10.2.1.2	Permanganate Value Test.....	253
10.2.1.3	Chemical Oxygen Demand.....	253
10.2.1.4	Total Organic Carbon	254
10.2.1.5	Total Suspended Solids.....	254
10.2.1.6	Volatile Suspended Solids	254
10.3	Systems for the Treatment of Sewage.....	254
10.3.1	Aerobic Breakdown of Raw Waste Waters.....	254
10.3.1.1	The Activated Sludge System.....	255
10.3.1.2	The Trickling Filter.....	259
10.3.1.3	Rotating Discs	261
10.3.1.4	Oxidation Ponds	262
10.3.2	Anaerobic Sewage Systems	264
10.3.2.1	Treatment of the Sludge from Aerobic Sewage Treatment Systems: Anaerobic Breakdown of Sludge.....	264
10.3.2.2	The Septic Tank	265
10.3.2.3	The Imhoff Tank	267
10.3.2.4	Cesspools	267
10.4	Advanced Wastewater Treatment.....	268
10.4.1	Methods Used in Advanced Wastewater Treatment	269
	References.....	273

11	The Disposal of Municipal Solid Wastes	275
11.1	The Nature of Wastes in General.....	275
11.2	The World-Wide Development of Interest in the Environment.....	276
11.2.1	The Stockholm Conference, 1972: Beginning of World-Wide Interest in the Protection of the Environment	276
11.2.2	Environmental Regulation in the European Union.....	281
11.2.3	Environmental Regulations in Japan	281
11.2.4	Governmental Regulation of the Environment in Ghana...	281
11.2.5	Egypt's Environmental Affairs Agency	282
11.3	Nature of Municipal Solid Wastes	282
11.3.1	Integrated Solid Waste Management	283
11.3.1.1	Source Reduction.....	284
11.3.1.2	Recycling	284
11.3.1.3	Incineration with Energy Recovery	285
11.3.1.4	Composting.....	290
11.3.1.5	Landfills Used in the Disposal of MSW	292
11.4	Anaerobic Breakdown of Organic Matter in Landfills (and Aquatic Sediments).....	298
11.4.1	Some Properties of Methanogens	298
11.4.2	Landfill Gas	299
11.4.2.1	Landfill Methane Capture Technology	301
11.5	Options for Municipal Solid Wastes Management	301
	References.....	302
	Index	305
