

# MODELING AND SIMULATION OF AEROSPACE VEHICLE DYNAMICS SECOND EDITION

Peter H. Zipfel

AMERICAN INSTITUTE OF  
AERONAUTICS AND ASTRONAUTICS

**AIAA EDUCATION SERIES**

JOSEPH A. SCHETZ  
EDITOR-IN-CHIEF

# Table of Contents

<b>Preface to the Second Edition</b> .....	xiii
<b>Preface to the First Edition</b> .....	xv
<b>Nomenclature</b> .....	xix
<b>List of Acronyms</b> .....	xxi
<b>Chapter 1. Overview</b> .....	<b>1</b>
1.1 Virtual Engineering .....	2
1.2 Modeling of Flight Dynamics .....	4
1.3 Simulation of Aerospace Vehicles .....	9
References .....	13
 <b>Part 1 Modeling of Flight Dynamics</b>  	
<b>Chapter 2. Mathematical Concepts in Modeling</b> .....	<b>17</b>
2.1 Classical Mechanics' .....	17
2.2 Tensor Elements .....	23
2.3 Modeling of Geometry .....	39
2.4 Summary .....	49
References .....	49
Problems .....	50
<b>Chapter 3. Frames and Coordinate Systems</b> .....	<b>55</b>
3.1 Frames .....	55
3.2 Coordinate Systems .....	61
References .....	83
Problems .....	83
<b>Chapter 4. Kinematics of Translation and Rotation</b> .....	<b>87</b>
4.1 Rotation Tensor .....	87
4.2 Kinematics of Changing Times .....	103
4.3 Attitude Determination .....	117
References .....	129
Problems .....	129
<b>Chapter 5. Translational Dynamics</b> .....	<b>139</b>
5.1 Linear Momentum .....	139
5.2 Newtonian Dynamics .....	142
5.3 Transformations .....	150

5.4	Simulation Implementation . . . . .	154
	References . . . . .	161
	Problems . . . . .	161
<b>Chapter 6.</b>	<b>Attitude Dynamics . . . . .</b>	<b>165</b>
6.1	Inertia Tensor . . . . .	166
6.2	Angular Momentum . . . . .	173
6.3	Euler's Law . . . . .	181
6.4	Gyroynamics . . . . .	197
6.5	Summary . . . . .	207
	References . . . . .	208
	Problems . . . . .	208
<b>Chapter 7.</b>	<b>Perturbation Equations . . . . .</b>	<b>217</b>
7.1	Perturbation Techniques . . . . .	217
7.2	Linear and Angular Momentum Equations . . . . .	220
7.3	Aerodynamic Forces and Moments . . . . .	226
7.4	Perturbation Equations of Steady Flight . . . . .	235
7.5	Perturbation Equations of Unsteady Flight . . . . .	241
	References . . . . .	254
	Problems . . . . .	255
<b>Part 2 Simulation of Aerospace Vehicles</b>		
<b>Chapter 8.</b>	<b>Three-Degrees-of-Freedom Simulation . . . . .</b>	<b>259</b>
8.1	Equations of Motion . . . . .	260
8.2	Subsystem Models . . . . .	265
8.3	Simulations . . . . .	276
	References . . . . .	286
	Problems . . . . .	286
<b>Chapter 9.</b>	<b>Five-Degrees-of-Freedom Simulation . . . . .</b>	<b>289</b>
9.1	Pseudo-Five-DoF Equations of Motion . . . . .	290
9.2	Subsystem Models . . . . .	300
9.3	Simulations . . . . .	341
	References . . . . .	362
	Problems . . . . .	363
<b>Chapter 10.</b>	<b>Six-Degrees-of-Freedom Simulation . . . . .</b>	<b>367</b>
10.1	Six-DoF Equations of Motion . . . . .	368
10.2	Subsystem Models . . . . .	400
10.3	Monte Carlo Analysis . . . . .	457
10.4	Simulations . . . . .	474
	References . . . . .	480
	Problems . . . . .	481
<b>Chapter 11.</b>	<b>Real-Time Applications . . . . .</b>	<b>487</b>
11.1	Flight Simulator . . . . .	487
11.2	Hardware-in-the-Loop Facility . . . . .	504

11.3 Wargaming .....	506
References .....	511
<b>Appendix A. Matrices .....</b>	<b>513</b>
A.1 Matrix Definitions .....	513
A.2 Matrix Operations .....	514
A.3 Matrix Eigenvalues .....	515
Problems .....	516
<b>Appendix B. CADAC Primer .....</b>	<b>517</b>
<b>Appendix C. Aerospace Simulations in C++ .....</b>	<b>535</b>
C.1 Introduction .....	535
C.2 C++ Architecture and Three-DoF Cruise Missile Simulation .....	535
C.3 High Fidelity Missile and Aircraft Simulations .....	536
C.4 Advanced Components of Ascent Vehicles .....	539
References .....	541
<b>Appendix D. Foundation of Tensor Flight Dynamics .....</b>	<b>543</b>
D.1 Introduction .....	543
D.2 Derivation of the Rotational Time Derivative .....	544
D.3 Tensor Property of the Rotational Time Derivative .....	547
D.4 Euler Transformation .....	553
D.5 Conclusions .....	556
References .....	556
<b>Index .....</b>	<b>557</b>
<b>Supporting Materials .....</b>	<b>569</b>
