

Chan I. Chung

Extrusion of Polymers

Theory and Practice

2nd Edition

HANSER

Contents

1	Introduction	1
1.1	Polymer Processing	1
1.2	Polymer Extrusion	2
1.3	Types of Extruders	4
1.3.1	Single-Screw Extruders	4
1.3.2	Twin-Screw Extruders	7
2	Physical Description of Single-Screw Extrusion	11
2.1	Overall Functions of a Single-Screw Extruder	11
2.2	Feeding Function	17
2.3	Solid Conveying Function	19
2.3.1	Initial Forwarding and Compaction of Pellets	19
2.3.2	Solid Bed Conveying	21
2.4	Melting Function	23
2.4.1	Dissipative Melting	24
2.4.2	Conduction Melting	26
2.5	Metering Function	27
2.6	Melt Quality and Melt Stability	29
2.6.1	Definition of Melt Quality and Melt Stability	29
2.6.2	Melt Pressure	31
2.6.3	Melt Temperature	32
2.6.4	Mixing	34
2.6.5	Effective Residence Time and Residence Time Distribution ..	36
2.7	Thermodynamic Analysis of Polymer Extrusion	37
2.8	Cooling	42
2.8.1	Barrel Cooling	42
2.8.2	Screw Cooling	42
2.9	Motor Power-Drive Torque Relationship, Screw Torque Strength, and Types of Motors	43
2.9.1	Motor Power-Drive Torque Relationship	43
2.9.2	Screw Torque Strength	44
2.9.3	Types of Motors	45
2.10	Wear	46
2.11	Extruder Size and Instrumentation	47
2.11.1	Extruder Size	47
2.11.2	Instrumentation	48

2.12	Rubbing Mechanisms of Solid Polymer on Metal Surface	49
2.13	Relationships Between Screw Channel Geometries	51
2.14	Variables Controlling Polymer Extrusion	52
3	Fundamentals of Polymers	55
3.1	Introduction to Polymers	55
3.1.1	Polymer Molecules	55
3.1.2	Polymerization Reaction and Common Polymers	57
3.1.3	Classification of Polymers	60
3.2	Average Molecular Weights and Molecular Weight Distribution ...	63
3.2.1	Average Molecular Weights	63
3.2.2	Molecular Weight Distribution	65
3.2.3	Measurements of Average Molecular Weights	67
3.3	Molecular Structure and Morphology of Polymer Solid	78
3.3.1	Molecular Structure	78
3.3.2	Morphology of Polymer Solid	81
3.3.3	Glass Transition and Melting	92
3.3.4	Phase Separation in Blends, Block Copolymers, and Graft Copolymers	93
3.4	Effects of Processing Variables on Morphology	94
3.4.1	Stress and Strain	94
3.4.2	Temperature	95
3.4.3	Pressure	102
3.4.4	Annealing	103
3.5	Melt Rheology	104
3.5.1	Types of Fluids	104
3.5.2	Rheological Properties of Polymer Melts	110
3.5.3	Measurement of Melt Rheological Properties	126
3.5.4	Melt Flow Index	140
3.5.5	Extensional Flow and Tensile Viscosity	144
3.5.6	Flow Instability	146
3.5.7	Flow Through Simple Dies	152
3.5.8	Elastic Memory Effect on Extrudate Shape	160
3.5.9	Effects of Molecular Parameters on Melt Rheological and Physical Properties	161
3.5.10	Relationships between Melt Rheological Properties and Processability in Extrusion	166
3.6	Other Polymer Properties and Feed Characteristics Relevant to Extrusion	167
3.6.1	Thermodynamic Properties: Specific Heat, Enthalpy, and Heat of Fusion	167

3.6.2	Flow Temperature and Mechanical Melting	169
3.6.3	Thermo/mechanical Stability	170
3.6.4	External Friction and Internal Friction	171
3.6.5	Bulk Density and Compressibility of Feed	174
3.6.6	Melt Density	175
4	Theories of Single-Screw Extrusion	183
4.1	Three Basic Functions of a Single-Screw Extruder	183
4.2	Solid Conveying Models	184
4.2.1	Frictional Force and Viscous Shear Force	184
4.2.2	Output Rate in Terms of the Solid Conveying Angle	187
4.2.3	Analysis of the Solid Conveying Angle	192
4.2.4	Solid Conveying Model Based on Viscosity	196
4.2.5	Solid Conveying Model Based on Friction	210
4.2.6	Elastic Solid Bed	218
4.3	Melting Models	219
4.3.1	Dissipative Melting Models	219
4.3.2	Conduction Melting Model	275
4.4	Metering Models	281
4.4.1	Isothermal Newtonian Fluid Model	284
4.4.2	Isothermal Power-Law Fluid Model	295
4.5	Effects of Flight Clearance	302
4.5.1	Solid Conveying Models	303
4.5.2	Melting Models	303
4.5.3	Metering Models	304
4.6	Comprehensive Extrusion Model	305
4.6.1	Computer Simulation	305
4.6.2	Output Rate	306
4.6.3	Motor Power	306
5	Screw Design, High Performance Screws, and Scale-Up	313
5.1	Screw Design	313
5.1.1	General Screw Design Guidelines	313
5.1.2	Scientific Screw Design Method	315
5.2	High Performance Screws	326
5.2.1	Flow Restriction/Mixing Type	329
5.2.2	Barrier-to-Melt Type	329
5.2.3	Barrier Between Solid Bed and Melt Pool Type	330
5.2.4	Solid/Melt Mixing Type	332
5.3	Motor Power as a Function of Screw Speed and Size	334
5.4	Melt Temperature as a Function of Screw Speed and Size	338

5.5	Scale-Up Methods	344
5.5.1	Common Scale-Up Method	344
5.5.2	Balanced Scale-Up Method Based on Melting Capacity	348
5.5.3	Scale-Up Method for Heat or Shear Sensitive Polymers	354
6	Gear Pump, Static Mixer, and Dynamic Mixer	357
6.1	Gear Pump	357
6.2	Static Mixer	359
6.3	Dynamic Mixer	360
7	Die Designs	365
7.1	Introduction	365
7.2	An Analytical Model for Coat-Hanger Dies	366
7.2.1	Die Pressure	370
7.2.2	Manifold Inlet Size	371
7.2.3	Manifold Profile	373
7.3	Film and Sheet Dies	375
7.3.1	Introduction	375
7.3.2	Die Types	375
7.3.3	Die Body Materials	377
7.3.4	Manifold Designs	377
7.3.5	Deckling Systems	378
7.3.6	Temperature Control	380
7.3.7	Adjustment Systems	380
7.3.8	Die Operating Information	384
7.3.9	Safety	385
7.4	Coextrusion Dies for Multilayer Flat Films and Sheets	386
7.4.1	Overview	386
7.4.2	Introduction	387
7.4.3	Overview of General Coextrusion Equipment	389
7.4.4	Feedblock Designs	394
7.4.5	Coextrusion Systems for Flat Films and Sheets	397
7.4.6	Layer Instabilities or Melt Disturbances	398
7.4.7	Summary	401
8	Viscoelastic Effects in Melt Flow	403
8.1	Introduction	403
8.2	Coextrusion	403
8.3	Viscous Flow Effects	405

8.4	Elastically Driven Flows	408
8.4.1	Background and Theory	408
8.4.2	Numerical Simulations	409
8.4.3	Experimental Procedures	412
8.4.4	Comparison of Experimental and Numerical Results	413
8.5	Viscoelastic Flows	422
9	Special Single-Screw Extruder with Channels on the Barrel	427
9.1	Introduction	427
9.2	HELIBAR [®] or Extruder with Channeled Barrel	428
9.3	Performance of an Extruder with Channeled Barrel	430
10	Physical Description of Twin-Screw Extruders	439
10.1	Introduction	439
10.2	Intermeshing Co-Rotating Twin-Screw Extruder	442
10.2.1	Conveying Elements	444
10.2.2	Kneading Blocks	445
10.2.3	Mixing Blocks	447
10.2.4	Sealing Blocks	448
10.3	Intermeshing Counter-Rotating Twin-Screw Extruder	448
10.4	Non-Intermeshing Counter-Rotating Twin-Screw Extruder	450
Appendix A Color Figures		453
Appendix B Universal Constants, Unit Conversion Factors, and Prefixes		463
Nomenclature		465
Author Index		475
Subject Index		479
