	29.2	Design of foundations	887
		Fixed and pinned column bases	891

30.1 Introduction 30.2 Types of steel piles 30.3 Geotechnical uncertainty 30.4 Choosing a steel basement 30.5 Detailed basement design: Introduction 30.6 Detailed basement design: Selection of soil parameters 30.7 Detailed basement design: Geotechnical analysis 30.8 Detailed basement design: Structural design 30.9 Other design details 30.10 Constructing a steel basement: Pile installation techniques 30.11 Specification and site control 30.12 Movement and monitoring References to Chapter 30 Further reading for Chapter 30 CONSTRUCTION 31 Design for movement in structures 31.1 Introduction 31.2 Effects of temperature variation 31.3 Spacing of expansion joints 31.4 Design for movement in typical single-storey industrial steel buildings 31.5 Design for movement in typical multi-storey buildings 31.6 Treatment of movement joints 31.7 Use of special bearings References to Chapter 31 32 Tolerances 32.1 Introduction 32.2 Standards 32.3 Implications of tolerances 32.4 Fabrication tolerances 32.5 Erection tolerances 32.6 Fabrication 33.1 Introduction 33.2 Economy of fabrication		29.5	Pinned column bases – axially loaded I-section columns Design of fixed column bases Holding-down systems References to Chapter 29 Further reading for Chapter 29 Worked example	891 902 906 908 909 910
31. Design for movement in structures 31.1 Introduction 31.2 Effects of temperature variation 31.3 Spacing of expansion joints 31.4 Design for movement in typical single-storey industrial steel buildings 31.5 Design for movement in typical multi-storey buildings 31.6 Treatment of movement joints 31.7 Use of special bearings References to Chapter 31 32 Tolerances 32.1 Introduction 32.2 Standards 32.3 Implications of tolerances 32.4 Fabrication tolerances 32.5 Erection tolerances References to Chapter 32 Further reading for Chapter 32 33 Fabrication 33.1 Introduction	30	30.1 30.2 30.3 30.4 30.5 30.6 30.7 30.8 30.9 30.10 30.11	Introduction Types of steel piles Geotechnical uncertainty Choosing a steel basement Detailed basement design: Introduction Detailed basement designs: Selection of soil parameters Detailed basement design: Geotechnical analysis Detailed basement design: Structural design Other design details Constructing a steel basement: Pile installation techniques Specification and site control Movement and monitoring References to Chapter 30	916 916 916 920 923 929 934 937 943 949 950 953 955 956
31.1 Introduction 31.2 Effects of temperature variation 31.3 Spacing of expansion joints 31.4 Design for movement in typical single-storey industrial steel buildings 31.5 Design for movement in typical multi-storey buildings 31.6 Treatment of movement joints 31.7 Use of special bearings References to Chapter 31 32 Tolerances 32.1 Introduction 32.2 Standards 32.3 Implications of tolerances 32.4 Fabrication tolerances 32.5 Erection tolerances References to Chapter 32 Further reading for Chapter 32 33 Fabrication 33.1 Introduction	СО	NSTR	UCTION	
32.1 Introduction 32.2 Standards 32.3 Implications of tolerances 32.4 Fabrication tolerances 32.5 Erection tolerances References to Chapter 32 Further reading for Chapter 32 33 Fabrication 33.1 Introduction	31	31.1 31.2 31.3 31.4 31.5 31.6	Introduction Effects of temperature variation Spacing of expansion joints Design for movement in typical single-storey industrial steel buildings Design for movement in typical multi-storey buildings Treatment of movement joints Use of special bearings	959 959 961 962 964 965 967 969
32.2 Standards 32.3 Implications of tolerances 32.4 Fabrication tolerances 32.5 Erection tolerances References to Chapter 32 Further reading for Chapter 32 33 Fabrication 33.1 Introduction	32			970
33.1 Introduction		32.2 32.3 32.4	Standards Implications of tolerances Fabrication tolerances Erection tolerances References to Chapter 32	970 972 974 976 982 1000
	33	33.1	Introduction	1002 1002 1002

	33.4 33.5 33.6 33.7	Welding Bolting Cutting Handling and routeing of steel Quality management References to Chapter 33 Further reading for Chapter 33	1009 1009 1012 1016 1020 1023 1023
34	Erecti		1024
		Introduction	1024 1025
		Method statements, regulations and documentation	1023
		Planning	1020
		Site practices	1029
		Site fabrication and modifications	1033
		Steel decking and shear connectors Cranes and craneage	1037
		Safety	1048
		Accidents	1055
	34.7	References to Chapter 34	1056
		Further reading for Chapter 34	1056
35	Fire p	rotection and fire engineering	1057
		Introduction	1057
		Building regulations	1057
		Fire engineering design codes	1058
		Structural performance in fire	1062
		Fire protection materials	1072
		Advanced fire engineering	1073
	35.7	Selection of an appropriate approach to fire protection and fire	1078
		engineering for specific buildings	1078
		References to Chapter 35	1078
		Worked example	
36		sion and corrosion prevention	1088
		Introduction	1088 1089
		General corrosion	1090
	36.3	Other forms of corrosion	1090
	36.4 36.5	Corrosion rates Effect of the environment	1091
	36.6	Design and corrosion	1092
	36.7	Surface preparation	1093
	36.8	Metallic coatings	1095
	36.9	Paint coatings	1097
		Application of paints	1101
		Weather-resistant steels	1102
		The protective treatment specification	1104
		Relevant standards	1107

Appendix	1110
Steel technology	
Elastic properties	1111
European standards for structural steels	1112
Design theory	
Bending moment, shear and deflection	1115
Second moments of area	1143
Geometrical properties of plane sections	1151
Plastic moduli	1154
Formulae for rigid frames	1157
Design of elements and connections	
Explanatory notes on section dimensions and properties	1175
Tables of dimensions and gross section properties	1193
Bolt and Weld Data for S275	1259
Bolt and Weld Data for S355	1274
Eurocodes	
Extracts from Concise Eurocodes	1289
Floors	
Floor plates	1309
Construction	
Fire resistance	1312
Section factors for fire design	1332
Corrosion resistance	1337
Standards	
British and European Standards for steelwork	1340
Index	1351
