

Preface	xv
Contributors	xix
1. Introduction	1
<i>Franklin (Feng) Tao, Yuan Zhu, and Steven L. Bernasek</i>	
1.1 Motivation for a Book on Functionalization of Semiconductor Surfaces	1
1.2 Surface Science as the Foundation of the Functionalization of Semiconductor Surfaces	2
1.2.1 Brief Description of the Development of Surface Science	2
1.2.2 Importance of Surface Science	3
1.2.3 Chemistry at the Interface of Two Phases	4
1.2.4 Surface Science at the Nanoscale	5
1.2.5 Surface Chemistry in the Functionalization of Semiconductor Surfaces	7
1.3 Organization of this Book	7
References	9
2. Surface Analytical Techniques	11
<i>Ying Wei Cai and Steven L. Bernasek</i>	
2.1 Introduction	11
2.2 Surface Structure	12
2.2.1 Low-Energy Electron Diffraction	13
2.2.2 Ion Scattering Methods	14
2.2.3 Scanning Tunneling Microscopy and Atomic Force Microscopy	15
2.3 Surface Composition, Electronic Structure, and Vibrational Properties	16
2.3.1 Auger Electron Spectroscopy	16
2.3.2 Photoelectron Spectroscopy	17
2.3.3 Inverse Photoemission Spectroscopy	18
2.3.4 Vibrational Spectroscopy	18

2.3.4.1	Infrared Spectroscopy	19
2.3.4.2	High-Resolution Electron Energy Loss Spectroscopy	19
2.3.5	Synchrotron-Based Methods	20
2.3.5.1	Near-Edge X-Ray Absorption Fine Structure Spectroscopy	20
2.3.5.2	Energy Scanned PES	21
2.3.5.3	Glancing Incidence X-Ray Diffraction	21
2.4	Kinetic and Energetic Probes	21
2.4.1	Thermal Programmed Desorption	22
2.4.2	Molecular Beam Sources	22
2.5	Conclusions	23
	References	23
3.	Structures of Semiconductor Surfaces and Origins of Surface Reactivity with Organic Molecules	27
	<i>Yongquan Qu and Keli Han</i>	
3.1	Introduction	27
3.2	Geometry, Electronic Structure, and Reactivity of Clean Semiconductor Surfaces	28
3.2.1	Si(100)-(2×1), Ge(100)-(2×1), and Diamond(100)-(2×1) Surfaces	29
3.2.2	Si(111)-(7×7) Surface	33
3.3	Geometry and Electronic Structure of H-Terminated Semiconductor Surfaces	34
3.3.1	Preparation and Structure of H-Terminated Semiconductor Surfaces Under UHV	34
3.3.2	Preparation and Structure of H-Terminated Semiconductor Surfaces in Solution	35
3.3.3	Preparation and Structure of H-Terminated Semiconductor Surfaces Through Hydrogen Plasma Treatment	36
3.3.4	Reactivity of H-Terminated Semiconductor Surface Prepared Under UHV	36
3.3.5	Preparation and Structure of Partially H-Terminated Semiconductor Surfaces	36
3.3.6	Reactivity of Partially H-Terminated Semiconductor Surfaces Under Vacuum	38
3.4	Geometry and Electronic Structure of Halogen-Terminated Semiconductor Surfaces	39
3.4.1	Preparation of Halogen-Terminated Semiconductor Surfaces Under UHV	40

3.4.2 Preparation of Halogen-Terminated Semiconductor Surfaces from H-Terminated Semiconductor Surfaces	41
3.5 Reactivity of Hydrogen- or Halogen-Terminated Semiconductor Surfaces in Solution	41
3.5.1 Reactivity of Si and Ge Surfaces in Solution	41
3.5.2 Reactivity of Diamond Surfaces in Solution	43
3.6 Summary	45
Acknowledgments	46
References	46
4. Pericyclic Reactions of Organic Molecules at Semiconductor Surfaces	51
<i>Keith T. Wong and Stacey F. Bent</i>	
4.1 Introduction	51
4.2 [2+2] Cycloaddition of Alkenes and Alkynes	53
4.2.1 Ethylene	53
4.2.2 Acetylene	57
4.2.3 <i>Cis</i> - and <i>Trans</i> -2-Butene	58
4.2.4 Cyclopentene	59
4.2.5 [2+2]-Like Cycloaddition on Si(111)-(7×7)	61
4.3 [4+2] Cycloaddition of Dienes	62
4.3.1 1,3-Butadiene and 2,3-Dimethyl-1,3-Butadiene	63
4.3.2 1,3-Cyclohexadiene	66
4.3.3 Cyclopentadiene	67
4.3.4 [4+2]-Like Cycloaddition on Si(111)-(7×7)	69
4.4 Cycloaddition of Unsaturated Organic Molecules Containing One or More Heteroatom	71
4.4.1 C=O-Containing Molecules	71
4.4.2 Nitriles	78
4.4.3 Isocyanates and Isothiocyanates	80
4.5 Summary	81
Acknowledgment	83
References	83
5. Chemical Binding of Five-Membered and Six-Membered Aromatic Molecules	89
<i>Franklin (Feng) Tao and Steven L. Bernasek</i>	
5.1 Introduction	89
5.2 Five-Membered Aromatic Molecules Containing One Heteroatom	89

5.2.1	Thiophene, Furan, and Pyrrole on Si(111)-(7×7)	90
5.2.2	Thiophene, Furan, and Pyrrole on Si(100) and Ge(100)	92
5.3	Five-Membered Aromatic Molecules Containing Two Different Heteroatoms	95
5.4	Benzene	98
5.4.1	Different Binding Configurations on (100) Face of Silicon and Germanium	98
5.4.2	Di-Sigma Binding on Si(111)-(7×7)	99
5.5	Six-Membered Heteroatom Aromatic Molecules	100
5.6	Six-Membered Aromatic Molecules Containing Two Heteroatoms	101
5.7	Electronic and Structural Factors of the Semiconductor Surfaces for the Selection of Reaction Channels of Five-Membered and Six-Membered Aromatic Rings	102
	References	103
6.	Influence of Functional Groups in Substituted Aromatic Molecules on the Selection of Reaction Channel in Semiconductor Surface Functionalization	105
	<i>Andrew V. Teplyakov</i>	
6.1	Introduction	105
6.1.1	Scope of this Chapter	105
6.1.2	Structure of Most Common Elemental Semiconductor Surfaces: Comparison of Silicon with Germanium and Carbon	107
6.1.3	Brief Overview of the Types of Chemical Reactions Relevant for Aromatic Surface Modification of Clean Semiconductor Surfaces	111
6.2	Multifunctional Aromatic Reactions on Clean Silicon Surfaces	113
6.2.1	Homoaromatic Compounds Without Additional Functional Groups	113
6.2.2	Functionalized Aromatics	116
6.2.2.1	Dissociative Addition	116
6.2.2.2	Cycloaddition	120
6.2.3	Heteroaromatics: Aromaticity as a Driving Force in Surface Processes	130
6.2.4	Chemistry of Aromatic Compounds on Partially Hydrogen-Covered Silicon Surfaces	137
6.2.5	Delivery of Aromatic Groups onto a Fully Hydrogen Covered Silicon Surface	147
6.2.5.1	Hydrosilylation	147
6.2.5.2	Cyclocondensation	148

6.2.6 Delivery of Aromatic Compounds onto Protected Silicon Substrates	150
6.3 Summary	151
Acknowledgments	152
References	152
7. Covalent Binding of Polycyclic Aromatic Hydrocarbon Systems	163
<i>Kian Soon Yong and Guo-Qin Xu</i>	
7.1 Introduction	163
7.2 PAHs on Si(100)-(2×1)	165
7.2.1 Naphthalene and Anthracene on Si(100)-(2×1)	165
7.2.2 Tetracene on Si(100)-(2×1)	167
7.2.3 Pentacene on Si(100)-(2×1)	169
7.2.4 Perylene on Si(100)-(2×1)	172
7.2.5 Coronene on Si(100)-(2×1)	173
7.2.6 Dibenzo[<i>a,j</i>]coronene on Si(100)-(2×1)	174
7.2.7 Acenaphthylene on Si(100)-(2×1)	175
7.3 PAHs on Si(111)-(7×7)	176
7.3.1 Naphthalene on Si(111)-(7×7)	176
7.3.2 Tetracene on Si(111)-(7×7)	179
7.3.3 Pentacene on Si(111)-(7×7)	184
7.4 Summary	189
References	190
8. Dative Bonding of Organic Molecules	193
<i>Young Hwan Min, Hangil Lee, Do Hwan Kim, and Sehun Kim</i>	
8.1 Introduction	193
8.1.1 What is Dative Bonding?	193
8.1.2 Periodic Trends in Dative Bond Strength	194
8.1.3 Examples of Dative Bonding: Ammonia and Phosphine on Si(100) and Ge(100)	197
8.2 Dative Bonding of Lewis Bases (Nucleophilic)	198
8.2.1 Aliphatic Amines	198
8.2.1.1 Primary, Secondary, and Tertiary Amines on Si(100) and Ge(100)	198
8.2.1.2 Cyclic Aliphatic Amines on Si(100) and Ge(100)	202
8.2.1.3 Ethylenediamine on Ge(100)	204
8.2.2 Aromatic Amines	206
8.2.2.1 Aniline on Si(100) and Ge(100)	207

8.2.2.2	Five-Membered Heteroaromatic Amines: Pyrrole on Si(100) and Ge(100)	209
8.2.2.3	Six-Membered Heteroaromatic Amines	211
8.2.3	O-Containing Molecules	218
8.2.3.1	Alcohols on Si(100) and Ge(100)	218
8.2.3.2	Ketones on Si(100) and Ge(100)	219
8.2.3.3	Carboxyl Acids on Si(100) and Ge(100)	220
8.2.4	S-Containing Molecules	223
8.2.4.1	Thiophene on Si(100) and Ge(100)	223
8.3	Dative Bonding of Lewis Acids (Electrophilic)	225
8.4	Summary	226
	References	229
9.	Ab Initio Molecular Dynamics Studies of Conjugated Dienes on Semiconductor Surfaces	233
	<i>Mark E. Tuckerman and Yanli Zhang</i>	
9.1	Introduction	233
9.2	Computational Methods	234
9.2.1	Density Functional Theory	235
9.2.2	Ab Initio Molecular Dynamics	237
9.2.3	Plane Wave Bases and Surface Boundary Conditions	239
9.2.4	Electron Localization Methods	244
9.3	Reactions on the Si(100)-(2 × 1) Surface	247
9.3.1	Attachment of 1,3-Butadiene to the Si(100)-(2 × 1) Surface	249
9.3.2	Attachment of 1,3-Cyclohexadiene to the Si(100)-(2 × 1) Surface	257
9.4	Reactions on the SiC(100)-(3 × 2) Surface	263
9.5	Reactions on the SiC(100)-(2 × 2) Surface	266
9.6	Calculation of STM Images: Failure of Perturbative Techniques	270
	References	273
10.	Formation of Organic Nanostructures on Semiconductor Surfaces	277
	<i>Md. Zakir Hossain and Maki Kawai</i>	
10.1	Introduction	277
10.2	Experimental	278
10.3	Results and Discussion	279
10.3.1	Individual 1D Nanostructures on Si(100)-H: STM Study	279
10.3.1.1	Styrene and Its Derivatives on Si(100)-(2 × 1)-H	279

10.3.1.2	Long-Chain Alkenes on Si(100)-(2×1)-H	284
10.3.1.3	Cross-Row Nanostructure	285
10.3.1.4	Aldehyde and Ketone: Acetophenone – A Unique Example	287
10.3.2	Interconnected Junctions of 1D Nanostructures	292
10.3.2.1	Perpendicular Junction	292
10.3.2.2	One-Dimensional Heterojunction	295
10.3.3	UPS of 1D Nanostructures on the Surface	296
10.4	Conclusions	298
	Acknowledgment	299
	References	299
11.	Formation of Organic Monolayers Through Wet Chemistry	301
	<i>Damien Aureau and Yves J. Chabal</i>	
11.1	Introduction, Motivation, and Scope of Chapter	301
11.1.1	Background	301
11.1.2	Formation of H-Terminated Silicon Surfaces	303
11.1.3	Stability of H-Terminated Silicon Surfaces	304
11.1.4	Approach	305
11.1.5	Outline	305
11.2	Techniques Characterizing Wet Chemically Functionalized Surfaces	307
11.2.1	X-Ray Photoelectron Spectroscopy	307
11.2.2	Infrared Absorption Spectroscopy	308
11.2.3	Secondary Ion Mass Spectrometry	310
11.2.4	Surface-Enhanced Raman Spectroscopy	311
11.2.5	Spectroscopic Ellipsometry	311
11.2.6	X-Ray Reflectivity	312
11.2.7	Contact Angle, Wettability	312
11.2.8	Photoluminescence	312
11.2.9	Electrical Measurements	313
11.2.10	Imaging Techniques	313
11.2.11	Electron and Atom Diffraction Methods	313
11.3	Hydrosilylation of H-Terminated Surfaces	314
11.3.1	Catalyst-Aided Reactions	315
11.3.2	Photochemically Induced Reactions	318
11.3.3	Thermally Activated Reactions	320
11.4	Electrochemistry of H-Terminated Surfaces	322
11.4.1	Cathodic Grafting	322
11.4.2	Anodic Grafting	323
11.5	Use of Halogen-Terminated Surfaces	324
11.6	Alcohol Reaction with H-Terminated Si Surfaces	327

11.7 Outlook	331
Acknowledgments	331
References	332
12. Chemical Stability of Organic Monolayers Formed in Solution	339
<i>Leslie E. O'Leary, Erik Johansson, and Nathan S. Lewis</i>	
12.1 Reactivity of H-Terminated Silicon Surfaces	339
12.1.1 Background	339
12.1.1.1 Synthesis of H-Terminated Si Surfaces	339
12.1.2 Reactivity of H-Si	342
12.1.2.1 Aqueous Acidic Media	342
12.1.2.2 Aqueous Basic Media	343
12.1.2.3 Oxygen-Containing Environments	344
12.1.2.4 Alcohols	344
12.1.2.5 Metals	345
12.2 Reactivity of Halogen-Terminated Silicon Surfaces	347
12.2.1 Background	347
12.2.1.1 Synthesis of Cl-Terminated Surfaces	348
12.2.1.2 Synthesis of Br-Terminated Surfaces	350
12.2.1.3 Synthesis of I-Terminated Surfaces	350
12.2.2 Reactivity of Halogenated Silicon Surfaces	351
12.2.2.1 Halogen Etching	351
12.2.2.2 Aqueous Media	352
12.2.2.3 Oxygen-Containing Environments	353
12.2.2.4 Alcohols	355
12.2.2.5 Other Solvents	356
12.2.2.6 Metals	359
12.3 Carbon-Terminated Silicon Surfaces	360
12.3.1 Introduction	360
12.3.2 Structural and Electronic Characterization of Carbon-Terminated Silicon	361
12.3.2.1 Structural Characterization of CH ₃ -Si(111)	362
12.3.2.2 Structural Characterization of Other Si-C Functionalized Surfaces	362
12.3.2.3 Electronic Characterization of Alkylated Silicon	364
12.3.3 Reactivity of C-Terminated Silicon Surfaces	366
12.3.3.1 Thermal Stability of Alkylated Silicon	367
12.3.3.2 Stability in Aqueous Conditions	367
12.3.3.3 Stability of Si-C Terminated Surfaces in Air	371
12.3.3.4 Stability of Si-C Terminated Surfaces in Alcohols	372
12.3.3.5 Stability in Other Common Solvents	372
12.3.3.6 Silicon-Organic Monolayer-Metal Systems	374

12.4 Applications and Strategies for Functionalized Silicon Surfaces	376
12.4.1 Tethered Redox Centers	378
12.4.2 Conductive Polymer Coatings	379
12.4.3 Metal Films	382
12.4.3.1 Stability Enhancement	382
12.4.3.2 Deposition on Organic Monolayers	382
12.4.4 Semiconducting and Nonmetallic Coatings	389
12.4.4.1 Stability Enhancement	389
12.4.4.2 Deposition on Si by ALD	389
12.5 Conclusions	391
References	392
13. Immobilization of Biomolecules at Semiconductor Interfaces	401
<i>Robert J. Hamers</i>	
13.1 Introduction	401
13.2 Molecular and Biomolecular Interfaces to Semiconductors	402
13.2.1 Functionalization Strategies	402
13.2.2 Silane Derivatives	403
13.2.3 Phosphonic Acids	406
13.2.4 Alkene Grafting	406
13.3 DNA-Modified Semiconductor Surfaces	407
13.3.1 DNA-Modified Silicon	407
13.3.2 DNA-Modified Diamond	411
13.3.3 DNA on Metal Oxides	412
13.4 Proteins at Surfaces	415
13.4.1 Protein-Resistant Surfaces	415
13.4.2 Protein-Selective Surfaces	417
13.5 Covalent Biomolecular Interfaces for Direct Electrical Biosensing	418
13.5.1 Detection Methods on Planar Surfaces	418
13.5.2 Sensitivity Considerations	420
13.6 Nanowire Sensors	422
13.7 Summary	422
Acknowledgments	423
