List of Figures	xvii
List of Tables	xxix
About the Author	xxxix
Preface	xxxiii
Chapter 1 Introduction to the Geometrical Theory of Diffraction	1
1.1. General Overview and Basic Concepts	1
1.2. The Fermat Principle	3
1.2.1. Conditions for a Path to Be a Ray	4
1.2.2. Application of Conditions (1.5) and (1.6) to Specific Problems	6
1.2.2.1. Segments in a Fluid with Constant Sound Velocity	6
1.2.2.2. Reflection from a Smooth Surface	7
1.2.2.3. Transmission through a Smooth Interface between Two Different Homogeneous Fluids	8
1.2.2.4. Excitation of Elastic Waves at a Smooth Interface between a Homogeneous Fluid and an Isotropic Homogeneous Elastic Body	9
1.2.2.5. Diffraction by an Edge in a Homogeneous Fluid	11
1.2.2.6. Surface Rays	12

## CONTENTS

1.3.	Extension of Fermat's Principle to Surface Waves	12
1.3.1.	Planar Interface	13
1.3.2.	Curved Interface	20
1.4.	Fundamentals of Asymptotic Expansions	22
1.4.1.	Asymptotic Sequence	23
1.4.2.	Compatible Asymptotic Sequence	25
1.4.3.	Properties of an Asymptotic Expansion	27
1.5.	Asymptotic Solution of the Wave Equation in a Source-Free, Unbounded Medium	28
1.5.1.	Derivation of the Asymptotic Expansion of the Solution	28
1.5.2.	Resolution of the Eikonal Equation	33
1.5.3.	Properties of the Characteristic Curves	34
1.5.4.	Resolution of the Transport Equation	35
1.6.	Acoustic Field Reflected by a Smooth, Rigid, Soft, or Impedance Surface	40
1.7.	Reflected and Transmitted Waves at a Smooth Interface between a Fluid and an Elastic Medium	45
1.8.	Acoustic Field Diffracted by the Edge of an Impenetrable Wedge	53
1.9.	Acoustic Field in the Shadow Zone of a Smooth Convex Object	63
	References	70
Chapter 2	Canonical Problems and Nonuniform Asymptotic Theory of Acoustic Wave Diffraction	71
2.1.	Introduction	71
2.2.	The Wedge	72

2.2.1.	Hard and Soft Straight Wedge at Normal and Oblique Incidence	72
2.2.1.1.	Line Source Excitation	72
2.2.1.2.	Plane Wave Incidence	89
2.2.2.	Impedance Wedge at Normal and Oblique Incidence: Maliuzhinets's Solution	92
2.2.2.1.	Analytical Details for the Justification of the General Form of the Solution	93
2.2.2.2.	Derivation of the Solution	101
2.2.2.3.	Asymptotic Evaluation of the Solution	110
2.2.2.4.	Generalization to Oblique Incidence	122
2.2.3.	Elastic Wedge-Shaped Shell	125
2.2.3.1.	Derivation of the Solution	125
2.2.3.2.	Asymptotic Evaluation of the Solution	132
2.2.3.3.	Generalization of the Elastic Wedge-Shaped Shell Solution to Oblique Incidence	137
2.2.3.4.	Typical Examples	138
2.3.	The Circular Cylinder	140
2.3.1.	Circular Cylinder with Hard, Soft, or Impedance Boundary Conditions	140
2.3.1.1.	General Solution to the Problem	140
2.3.1.2.	Asymptotic Expansion and Physical Interpretation of the Solution	148
2.3.1.3.	Expression of the Diffraction Coefficient	162
2.3.1.4.	Noncircular Convex Cylinder	165
2.3.1.5.	Field at an Observation Point Located on the Surface of a Circular Cylinder	166
2.3.1.6.	Position of the Poles in the Complex $v$ -Plane	169
2.3.1.7.	Oblique Incidence	171
2.3.2.	Three-Dimensional Convex Surface with Hard, Soft, or Impedance Boundary Conditions	176

## CONTENTS

2.3.3.	Hollow Elastic Circular Cylinder	178
2.3.3.1.	General Solution for Normal Incidence	178
2.3.3.2.	Watson Transformation	182
2.3.3.3.	Asymptotic Expansion and Physical Interpretation of the Solution	186
2.3.3.4.	Field Diffracted in the Shadow Region by Creeping Waves	192
2.3.3.5.	Noncircular Convex Cylindrical Shell	195
2.3.3.6.	Oblique Incidence for Creeping Waves	195
2.3.3.7.	Elastic Surface Waves	197
2.3.3.8.	Oblique Incidence for Elastic Surface Waves	204
2.3.3.9.	Noncircular Cylindrical Shell at Normal and Oblique Incidence	207
2.3.4.	Three-Dimensional Convex Shell	209
2.3.4.1.	General Solution for Creeping Waves	209
2.3.4.2.	General Solution for Elastic Surface Waves	211
2.4.	Concave Surface	211
2.4.1.	Introduction	211
2.4.2.	Solution of the Canonical Problem of a Line Source Parallel to the Generatrix of a Concave Circular Cylinder	212
2.4.2.1.	Derivation of the Solution	212
2.4.2.2.	Extraction of the GA Contributions	220
2.4.2.3.	Expression of the Remainder Integral	228
2.4.3.	Extension of the Solution to More Generalized Situations	233
	References	235
Chapter 3	Uniform Asymptotic Theory of Acoustic Wave Diffraction	239
3.1.	Introduction	239
3.2.	The Three-Dimensional Convex Wedge	240

3.2.1.	Uniform Solution for the Acoustic Field Scattered by a Convex Three-Dimensional Hard or Soft Wedge	240
3.2.1.1.	Uniform Asymptotic Solution of a Hard or Soft Wedge with Planar Faces Submitted to a Planar Sound Wave	242
3.2.1.2.	Uniform Asymptotic Solutions for a Soft or Hard Wedge with Curved Faces	267
3.2.2.	Uniform Asymptotic Solutions for the Acoustic Field Scattered by a Convex Impedance Wedge	272
3.2.2.1.	Uniform Asymptotic Solution of an Impedance Wedge with Planar Faces	273
3.2.2.2.	Uniform Asymptotic Solution for a General Three-Dimensional Impedance Wedge	290
3.2.3.	Uniform Asymptotic Solutions for the Acoustic Field Scattered by a Convex Wedge-Shaped Elastic Shell	294
3.2.3.1.	Uniform Asymptotic Solution for a Wedge-Shaped Shell with Planar Faces	295
3.2.3.2.	Uniform Asymptotic Solution for a Three-Dimensional Wedge-Shaped Shell	296
3.3.	The Three-Dimensional Smooth Convex Surface	297
3.3.1.	Uniform Asymptotic Solution through the Shadow Boundary of a Smooth Convex Two-Dimensional Surface	297
3.3.1.1.	Uniform Asymptotic Solution for a Circular Impedance Cylinder	298
3.3.1.2.	Uniform Asymptotic Solution for a Smooth Convex Impedance Cylinder	312
3.3.1.3.	Field in the Boundary Layer of a Smooth Convex Impedance Cylinder	314
3.3.2.	Uniform Asymptotic Solution through the Shadow Boundary of a Smooth Convex Three-Dimensional Surface	315
3.4.	The Three-Dimensional Smooth Convex Shell	319
3.4.1.	Uniform Solution for a Hollow Elastic Cylinder	320

## CONTENTS

3.4.1.1.	Uniform Solution for the GA Field Associated with the Creeping Wave Field	321
3.4.1.2.	Uniform Solution for the Reflected Field Associated with the Elastic Surface Wave Field	324
3.4.1.3.	Oblique Incidence	334
3.4.1.4.	Noncircular Cylindrical Shell	335
3.4.2.	Uniform Solution for a Three-Dimensional Convex Shell	336
3.4.2.1.	Uniform Solution for Creeping Waves	336
3.4.2.2.	Uniform Solution for Elastic Surface Waves	338
3.5.	Numerical Results	339
3.5.1.	Results Concerning the Wedge	339
3.5.2.	Results Concerning the Circular Cylinder	341
	References	345
Chapter 4	Wave Field Near a Caustic	349
4.1.	Introduction	349
4.2.	Techniques for Calculating the Field on a Caustic and in Its Neighborhood	351
4.2.1.	Observation Point Located Close to a Regular Caustic	351
4.2.1.1.	Canonical Problem for a Regular Caustic	354
4.2.1.2.	Uniform Asymptotic Expansion for a Regular Three-Dimensional Caustic	358
4.2.1.3.	Caustic of Rays Reflected by a Smooth Surface	361
4.2.1.4.	Caustic of Rays Diffracted by an Edge	362
4.2.1.5.	Caustic of Rays Diffracted by a Smooth Surface (Creeping Rays)	363
4.2.1.6.	Comments on the Solutions for a Regular Caustic	365
4.2.2.	Observation Point Located Close to a Line Cusp of a Caustic	366
	References	367

Chapter 5	Hybrid Diffraction Coefficients	369
5.1.	Introduction	369
5.2.	Edge-Excited and Edge-Diffracted Creeping Waves	369
5.2.1.	Spectral Representation of the Fock Field on a Smooth Convex Cylindrical Surface	371
5.2.2.	Hybrid Diffraction Coefficients for Creeping Waves on a Curved Wedge	373
5.2.2.1.	Two-Dimensional Wedge	373
5.2.2.2.	Three-Dimensional Wedge	378
5.2.2.3.	Solution Valid at Grazing Incidence and Grazing Observation	382
5.3.	Edge-Excited and Edge-Diffracted Surface Waves	384
5.3.1.	Impedance Wedge	384
5.3.2.	Elastic Wedge-Shaped Shell	388
5.3.3.	Elastic Surface Wave on a Curved Wedge	390
5.4.	Edge-Excited and Edge-Diffracted Whispering Gallery Waves	392
	References	394
Appendix A	A Brief Presentation of the Governing Equations for Wave Processes in Fluids	397
A.1.	Wave Propagation in Ideal Fluids	397
A.2.	Sound Waves	398
A.3.	Boundary Conditions	400
A.3.1.	Absolutely Rigid Boundary	400
A.3.2.	Absolutely Soft Boundary	401
A.3.3.	Interface between Two Fluids at Rest	401

## CONTENTS

A.4.	Harmonic Waves	401
A.5.	Reflection at a Boundary	402
A.5.1.	Absolutely Rigid Boundary	403
A.5.2.	Absolutely Soft Boundary	404
A.5.3.	Impedance Boundary	404
A.6.	Reflection and Refraction at the Interface of Two Homogeneous Fluids	404
	References	406
Appendix B	A Brief Presentation of the Governing Equations of Linearized Elasticity	409
B.1.	Deformation	409
B.2.	Linear Momentum and Stress Tensor	410
B.3.	Hooke's Law	413
B.4.	Waves in an Elastic Medium	414
B.5.	Boundary Conditions at Interfaces	415
B.6.	Elastic Waves in Homogeneous Isotropic Solids	415
B.7.	Harmonic Waves	418
B.8.	Reflection and Refraction at a Plane Interface	419
B.9.	Reflection on an Elastic Plate Separating a Fluid from Vacuum	425
B.9.1.	Application of the Boundary Conditions	426
B.9.2.	Solution of the System of Linear Equations	428
	References	430

Appendix C	Surface Waves	431
C.1.	Introduction	431
C.2.	Rayleigh Waves	432
C.3.	Surface Waves at Fluid–Solid Interfaces	434
C.4.	Leaky Waves	438
	References	443
Appendix D	General Formulas for the Principal Radii of Curvature of the Reflected Wave Front on a Three-Dimensional Surface	445
	References	446
Appendix E	Symmetric Form of the Maliuzhinets Diffraction Coefficient	447
Appendix F	Elements of the Determinant of the Boundary Conditions for a Circular Elastic Shell in a Fluid	453
F.1.	Normal Incidence	453
F.2.	Oblique Incidence	456
Index		459
