

Table of Contents

<i>Preface</i>	xv
1 Introduction to Pharmaceutical Analysis	1
1.1 Applications and Definitions	1
1.2 The Life of Medicines	4
1.3 The Quality of Medical Products	8
1.4 Summary	11
2 International Pharmacopoeias, Regulations and Guidelines	13
2.1 Overview of Legislation	13
2.2 Legislation and Regulations for Industrial Production	14
2.3 Life Time of Drugs and Drug Substances	17
2.4 Pharmacopoeias	18
2.5 International Harmonization	19
2.5.1 <i>International Conference on Harmonization</i>	20
2.5.2 <i>Pharmacopoeial Discussion Group</i>	20
2.6 Legislation and Regulations for Pharmacy Production	20
2.7 Summary	21
3 Fundamental Chemical Properties, Buffers and pH	23
3.1 pH and pK _a	23
3.2 Partition	25
3.3 Stereochemistry	28
3.4 Stability Testing	29
3.5 Summary	30
4 Fundamentals of Pharmaceutical Analysis	33
4.1 What is a Pharmaceutical (Chemical) Analysis?	33
4.2 How to Specify Quantities and Concentrations?	35
4.3 Basic Laboratory Equipment	37
4.3.1 <i>The Analytical Balance</i>	37
4.3.2 <i>Pipettes</i>	41
4.3.3 <i>Volumetric Flasks</i>	44
4.3.4 <i>Burettes</i>	47

4.4	How to Make Solutions and Dilutions	47
4.5	Calibration of Analytical Methods	49
4.6	Errors, Accuracy, and Precision	50
4.6.1	<i>Systematic and Random Errors</i>	50
4.6.2	<i>Accuracy and Precision</i>	51
4.7	Statistics	52
4.7.1	<i>Mean Value and Standard Deviation</i>	52
4.7.2	<i>Confidence Intervals</i>	54
4.7.3	<i>Comparison of Means with a t-Test</i>	55
4.7.4	<i>Q-Test to Reject Outliers</i>	56
4.7.5	<i>Linear Regression with the Method of Least Squares</i>	57
4.7.6	<i>How to Present an Analytical Result</i>	58
4.8	Some Words and Concepts	62
4.8.1	<i>Analysis and Determination</i>	62
4.8.2	<i>Sample Replicates and Measuring Replicates</i>	62
4.8.3	<i>Interference</i>	62
4.8.4	<i>Blind Samples</i>	62
5	Titrimetric Methods	65
5.1	Introduction	65
5.2	Acid–Base Titrations	72
5.3	Acid–Base Titrations in Non-Aqueous Media	75
5.4	Redox Titrations	78
5.5	Other Principles of Titration	81
5.6	Summary	82
6	Introduction to Spectroscopic Methods	83
6.1	Electromagnetic Radiation	83
6.2	Molecules and Electromagnetic Radiation	85
6.3	Atoms and Electromagnetic Radiation	86
6.4	Summary	88
7	UV Spectrophotometry	89
7.1	Principle of Quantitative Determination	89
7.2	Principle of Identification	94
7.3	Which Substances Have Strong UV Absorbance?	95
7.4	Instrumentation	95
7.5	Practical Work and Method Development	99
7.6	Areas of Usage and Performance	101
7.7	System Testing	101
7.8	Summary	102
8	IR Spectrophotometry	103
8.1	IR Spectrophotometry	103
8.2	Instrumentation	106
8.3	Scope	109

8.4 Instrument Calibration	109
8.5 NIR Spectrophotometry	110
8.6 Applications	112
8.7 Summary	114
9 Atomic Spectrometry	115
9.1 Atomic Absorption Spectrometry	115
9.2 Instrumentation	118
9.3 Applications and Performance	121
9.4 Practical Work and Method Development	122
9.5 Atomic Emission Spectrometry	123
9.6 Instrumentation	124
9.7 Summary	124
10 Chromatography	127
10.1 General Principles	127
10.2 Retention	131
10.3 Column Efficiency	133
10.4 Selectivity	135
10.5 Peak Symmetry	136
10.6 Resolution	138
10.7 Chromatographic Techniques	140
10.8 Summary	140
11 Chromatographic Separation Principles	141
11.1 General Introduction	141
11.2 Normal Phase Chromatography	142
11.2.1 Silica	142
11.2.2 Interactions	143
11.2.3 Order of Elution	144
11.2.4 Other Stationary Phases	145
11.2.5 Mobile Phases	146
11.2.6 Summary of Normal Phase Chromatography	147
11.3 Reversed Phase Chromatography	148
11.3.1 Stationary Phases	148
11.3.2 Retention Mechanisms	150
11.3.3 Mobile Phases	152
11.3.4 Ion-Pair Chromatography	155
11.3.5 Summary of Reversed Phase Chromatography	155
11.4 Hydrophilic Interaction Chromatography	156
11.5 Chiral Separations	156
11.6 Size Exclusion Chromatography	158
11.6.1 Principle	158
11.6.2 Summary of SEC	160
11.7 Ion Exchange Chromatography	160

12 Thin-Layer Chromatography	163
12.1 Introduction	163
12.2 Apparatus	164
12.3 TLC Plates	166
12.4 Stationary Phases	166
12.5 Mobile Phases	167
12.6 Chromatographic Development	168
12.7 Detection	169
12.8 Applications of TLC	169
12.9 Quantitative Analysis and Instrumentation	170
12.10 Summary	171
13 High Performance Liquid Chromatography	173
13.1 Introduction	173
13.2 The Chromatographic Separation Process	175
13.3 The Column	177
13.4 Pumps	180
13.5 Detectors	182
13.5.1 UV detector	182
13.5.2 Fluorescence Detector	184
13.5.3 Electrochemical Detector	186
13.5.4 Refractive Index, Evaporative Light Scattering and Corona Discharge Detectors	186
13.5.5 Combination of Detectors	187
13.6 Injectors	187
13.7 Mobile Phases	188
13.8 Solvents for Sample Preparation	189
13.9 Reporting the Results	189
13.10 Summary	190
14 Gas Chromatography	191
14.1 Introduction	191
14.2 Apparatus	192
14.3 Temperature	193
14.4 Carrier Gas	195
14.5 Stationary Phases	196
14.6 Selectivity in GC	197
14.7 Columns	198
14.7.1 Capillary Columns	198
14.7.2 Packed Columns	199
14.8 Injection Systems	200
14.8.1 Injection Systems for Capillary Columns	200
14.8.2 Injection Systems for Packed Columns	202
14.9 Detectors	203
14.9.1 Flame Ionization Detector	203
14.9.2 Nitrogen-Phosphorus Detector	203

14.9.3	<i>Thermal Conductivity Detector</i>	204
14.9.4	<i>Electron Capture Detector</i>	204
14.9.5	<i>Mass Spectrometry Detector</i>	206
14.10	Derivatization	206
14.10.1	<i>Silylation</i>	206
14.10.2	<i>Alkylation</i>	207
14.10.3	<i>Acylation</i>	207
14.11	The Uses of GC	208
14.12	More Advanced GC techniques	209
14.13	Summary	209
15	Capillary Electrophoresis	211
15.1	Principle and Theory	211
15.2	Electroosmotic Flow	213
15.3	Instrumentation	214
15.4	The Capillary	217
15.5	Sample Introduction	218
15.6	Capillary Zone Electrophoresis; an Example	221
15.7	Micellar Electrokinetic Chromatography	222
15.8	Chiral Separations	224
15.9	Coated Capillaries	225
15.10	Non-Aqueous CE	229
15.11	Summary	229
16	Mass Spectrometry	231
16.1	Introduction	231
16.2	Basic Theory	233
16.3	Electron Ionization	236
16.4	Identification using Electron Ionization Spectra	237
16.5	Characterization of Totally Unknowns using Electron Ionization Spectra	239
16.6	Chemical Ionization	244
16.7	Electrospray Ionization	246
16.8	Atmospheric Pressure Chemical Ionization	247
16.9	High-Resolution Mass Spectrometry	248
16.10	Instrumentation	250
16.11	Chromatography Coupled with Mass Spectrometry	253
16.12	Quantitative GC-MS and LC-MS	256
16.13	Areas of Usage and Performance	257
16.14	Matrix-Assisted Laser Desorption/Ionization Mass Spectrometry	257
16.15	Inductively Coupled Plasma Mass Spectrometry	258
16.16	Summary	259
17	Miscellaneous Chemical Techniques	261
17.1	Potentiometric Determination of Ions using Ion-Selective Electrodes	261
17.2	Paper Chromatography	263

17.3	Supercritical Fluid Chromatography	264
17.4	Gel Electrophoresis	265
17.5	Iso-Electric Focusing	267
17.6	Nuclear Magnetic Resonance Spectrometry	268
17.7	Raman Spectrometry	270
18	Sample Preparation	273
18.1	Why is Sample Preparation Required?	273
18.2	Main Strategies	274
18.3	Recovery and Enrichment	276
18.4	Protein Precipitation	278
18.5	Liquid–Liquid Extraction	279
	18.5.1 <i>Fundamentals</i>	279
	18.5.2 <i>A Closer Look at the Theory</i>	279
	18.5.3 <i>Extraction Solvents</i>	282
	18.5.4 <i>Calculation of Recovery</i>	283
	18.5.5 <i>Multiple Extractions</i>	285
	18.5.6 <i>LLE with Back-Extraction</i>	286
18.6	Solid–Liquid Extraction	287
18.7	Solid Phase Extraction	287
	18.7.1 <i>Fundamentals</i>	287
	18.7.2 <i>The SPE Column</i>	288
	18.7.3 <i>Conditioning</i>	289
	18.7.4 <i>Equipment</i>	290
	18.7.5 <i>Reversed-Phase SPE</i>	290
	18.7.6 <i>Secondary Interactions</i>	292
	18.7.7 <i>Ion Exchange SPE</i>	293
	18.7.8 <i>Mixed-Mode SPE</i>	295
	18.7.9 <i>Normal-Phase SPE</i>	297
18.8	Summary	298
19	Analytical Chemical Characteristics of Selected Drug Substances	299
19.1	Amitriptyline and Mianserin	299
19.2	Morphine and Codeine	301
19.3	Ibuprofen and Naproxen	302
19.4	Furosemide	304
19.5	Paracetamol (Acetaminophen)	306
19.6	Neutral Drugs	307
20	Quantification and Quality of Analytical Data	309
20.1	Peak Height and Peak Area	309
20.2	Calibration Methods	310
	20.2.1 <i>External Standard Method</i>	310
	20.2.2 <i>Internal Standard Method</i>	313
	20.2.3 <i>Standard Addition</i>	314
	20.2.4 <i>Normalization</i>	314

20.3	Validation	314
	20.3.1 Analytical Procedure	317
	20.3.2 Accuracy	317
	20.3.3 Precision	318
	20.3.4 Specificity	320
	20.3.5 Detection Limit	320
	20.3.6 Quantification Limit	321
	20.3.7 Linearity and Range	321
	20.3.8 Robustness	323
	20.3.9 Test Methods in the European Pharmacopeia	325
20.4	System Suitability	325
	20.4.1 Adjustment of Chromatographic Conditions	326
21	Chemical Analysis of Drug Substances	327
21.1	What is a Pharmaceutical Raw Material, how is it Produced and why must it be Controlled?	327
21.2	The Pharmacopoeias – the Basis for Control of Pharmaceutical Raw Materials	330
21.3	Which Contaminants are Found in Raw Materials, What are the Requirements in a Maximum Content and Why?	337
	21.3.1 Well Defined Chemical Compounds	339
	21.3.2 Mixtures of Organic Compounds	343
21.4	How to Check the Identity of Pharmaceutical Raw Materials	344
	21.4.1 Overview of the Identification Procedures	344
	21.4.2 Techniques used for the Identification of Well Defined Chemical Compounds	344
	21.4.2.1 Infrared Absorption Spectrophotometry	344
	21.4.2.2 Ultraviolet and Visible Absorption Spectrophotometry	347
	21.4.2.3 Thin-Layer Chromatography	351
	21.4.2.4 Melting Point	352
	21.4.2.5 Polarimetry	353
	21.4.2.6 High Performance Liquid Chromatography	356
	21.4.2.7 Chloride and Sulfate Identification	359
21.5	How to Test for Impurities in Pharmaceutical Raw Materials	359
	21.5.1 Main Purity Tests for Well Defined Chemical Compounds	359
	21.5.1.1 Appearance of Solution	361
	21.5.1.2 Absorbance	364
	21.5.1.3 Acidity/Alkalinity	365
	21.5.1.4 Optical Rotation	365
	21.5.1.5 Related Substances	366
	21.5.1.6 Solvent Residues	372
	21.5.1.7 Foreign Anions	372
	21.5.1.8 Cationic Impurities	376
	21.5.1.9 Loss on Drying	378
	21.5.1.10 Determination of Water	379

21.5.2	<i>Purity Tests for Raw Materials of the Type of Mixtures of Organic Compounds</i>	382
21.5.2.1	Oxidizing Substances	383
21.5.2.2	Acid Value	383
21.5.2.3	Hydroxyl Value	384
21.5.2.4	Iodine Value	384
21.5.2.5	Peroxide Value	385
21.5.2.6	Saponification Value	385
21.5.2.7	Unsaponifiable Matter	386
21.5.2.8	Other Tests	386
21.5.3	<i>Identification of the Raw Materials of the Type of Mixtures of Organic Compounds</i>	388
21.6	How to Determine the Purity of Pharmaceutical Raw Materials	389
21.6.1	<i>Acid–Base Titration in Aqueous Environment</i>	389
21.6.2	<i>Acid–Base Titration in a Non-Aqueous Environment</i>	393
21.6.3	<i>Redox Titrations</i>	396
21.6.4	<i>High Performance Liquid Chromatography</i>	396
21.6.5	<i>UV spectrophotometry</i>	401
21.7	How to Control Compounds for Which no Pharmacopoeia Monograph Exists	402
21.8	How are Ph.Eur. and USP Updated?	402
22	Chemical Analysis of Final Pharmaceutical Products	405
22.1	Quality Control of Final Pharmaceutical Products	405
22.2	Monographs and Chemical Testing	406
22.3	Identification of the Active Pharmaceutical Ingredient	412
22.4	Assay of the Active Pharmaceutical Ingredient	427
22.5	Chemical Tests for Final Pharmaceutical Products	446
22.5.1	<i>Test for Related Substances</i>	446
22.5.2	<i>Uniformity of Content</i>	449
22.5.3	<i>Dissolution</i>	451
23	Analysis of Drugs in Biological Fluids	453
23.1	Introduction	453
23.1.1	<i>Drug Development</i>	453
23.1.2	<i>Therapeutic Drug Monitoring</i>	455
23.1.3	<i>Forensic and Toxicological Analysis</i>	456
23.1.4	<i>Doping Control Analysis</i>	457
23.2	The Biological Matrix	458
23.3	Bioanalytical Methods	460
23.3.1	<i>Sampling</i>	460
23.3.2	<i>Sample Preparation</i>	461
23.3.3	<i>Protein Precipitation</i>	462
23.3.4	<i>Liquid–Liquid Extraction</i>	463
23.3.5	<i>Solid-Phase Extraction</i>	463
23.3.6	<i>Separation</i>	464

23.3.7	<i>Detection</i>	464
23.3.8	<i>Calibration and Quantification</i>	465
23.4	Examples	466
23.4.1	<i>Sample Preparation</i>	466
23.4.1.1	Sample Preparation Procedure by LLE	466
23.4.1.2	Comments to the Procedure	466
23.4.1.3	Sample Preparation Procedure by LLE and Back Extraction	467
23.4.1.4	Comments to the Procedure	467
23.4.1.5	Sample Preparation Procedure by SPE	467
23.4.1.6	Comments to the Procedure	468
23.4.1.7	Sample Preparation Procedure by Protein Precipitation	468
23.4.1.8	Comments to the Procedure	468
23.4.2	<i>Quantitative Determination</i>	468
23.4.2.1	Quantitative Determination of Amitriptyline in Serum by LC-MS	468
23.4.2.2	Comments to the Procedure	469
23.4.2.3	Determination of Valproic Acid in Serum by GC-MS	471
23.4.2.4	Comments to the Procedure	471
23.4.3	<i>Identification</i>	472
23.4.3.1	Sample Preparation Procedure for Unknown Screening by Mixed Mode Cation Exchange	472
23.4.3.2	Comments to the Procedure	472
23.4.3.3	GC-MS Procedure for Unknown Screening	473
23.4.3.4	Comments to the Procedure	473
23.4.3.5	LC-MS-MS Procedure for Unknown Screening	475
23.4.3.6	Comments to the Procedure	475
	Index	477
