Foreword by Magnus George Craford	ix
Foreword by C. P. Wong	xi
Foreword by B. J. Lee	xiii
Preface	xv
Acknowledgments	xix
About the Authors	xxi
1 Introduction	1
1.1 Historical Evolution of Lighting Technology	1
1.2 Development of LEDs	2
1.3 Basic Physics of LEDs	6
1.3.1 Materials	6
1.3.2 Electrical and Optical Properties	10
1.3.3 Mechanical and Thermal Properties	18
1.4 Industrial Chain of LED	19
1.4.1 LED Upstream Industry	21
1.4.2 LED Midstream Industry	22
1.4.3 LED Downstream Industry	22
1.5 Summary	28
References	29
2 Fundamentals and Development Trends of High Power LED Packaging	33
2.1 Brief Introduction to Electronic Packaging	33
2.1.1 About Electronic Packaging and Its Evolution	33
2.1.2 Wafer Level Packaging, More than Moore, and SiP	36
2.2 LED Chips	37
2.2.1 Current Spreading Efficiency	37
2.2.2 Internal Quantum Efficiency	41
2.2.3 High Light Extraction Efficiency	43
2.3 Types and Functions of LED Packaging	48
2.3.1 Low Power LED Packaging	49
2.3.2 High Power LED Packaging	50

2.4	Key Factors and System Design of High Power LED Packaging	51
2.5	Development Trends and Roadmap	57
2.5.1	Technology Needs	57
2.5.2	Packaging Types	59
2.6	Summary	62
	References	62
3	Optical Design of High Power LED Packaging Module	67
3.1	Properties of LED Light	67
3.1.1	Light Frequency and Wavelength	67
3.1.2	Spectral Distribution	69
3.1.3	Flux of Light	69
3.1.4	Lumen Efficiency	71
3.1.5	Luminous Intensity, Illuminance and Luminance	71
3.1.6	Color Temperature, Correlated Color Temperature and Color Rendering Index	76
3.1.7	White Light LED	80
3.2	Key Components and Packaging Processes for Optical Design	83
3.2.1	Chip Types and Bonding Process	83
3.2.2	Phosphor Materials and Phosphor Coating Processes	85
3.2.3	Lens and Molding Process	90
3.3	Light Extraction	93
3.4	Optical Modeling and Simulation	98
3.4.1	Chip Modeling	98
3.4.2	Phosphor Modeling	102
3.5	Phosphor for White LED Packaging	108
3.5.1	Phosphor Location for White LED Packaging	108
3.5.2	Phosphor Thickness and Concentration for White LED Packaging	118
3.5.3	Phosphor for Spatial Color Distribution	123
3.6	Collaborative Design	129
3.6.1	Co-design of Surface Micro-Structures of LED Chips and Packages	129
3.6.2	Application Specific LED Packages	134
3.7	Summary	144
	References	144
4	Thermal Management of High Power LED Packaging Module	149
4.1	Basic Concepts of Heat Transfer	149
4.1.1	Conduction Heat Transfer	150
4.1.2	Convection Heat Transfer	150
4.1.3	Thermal Radiation	151
4.1.4	Thermal Resistance	153
4.2	Thermal Resistance Analysis of Typical LED Packaging	154
4.3	Various LED Packages for Decreasing Thermal Resistance	156
4.3.1	Development of LED Packaging	156

4.3.2	Thermal Resistance Decrease for LED Packaging	158
4.3.3	SiP/COB LED Chip Packaging Process	162
4.4	Summary	164
	References	164
5	Reliability Engineering of High Power LED Packaging	167
5.1	Concept of Design for Reliability (DfR) and Reliability Engineering	167
5.1.1	Fundamentals of Reliability	168
5.1.2	Life Distribution	169
5.1.3	Accelerated Models	172
5.1.4	Applied Mechanics	175
5.2	High Power LED Packaging Reliability Test	179
5.2.1	Traditional Testing Standards, Methods, and Evaluation	179
5.2.2	Methods for Failure Mechanism Analysis	182
5.2.3	Failure Mechanisms Analysis	184
5.3	Rapid Reliability Evaluation	187
5.3.1	Material Property Database	190
5.3.2	Numerical Modeling and Simulation	194
5.4	Summary	211
	References	211
6	Design of LED Packaging Applications	215
6.1	Optical Design	215
6.1.1	Introduction of Light Control	215
6.1.2	Reflectors	220
6.1.3	Lenses	232
6.1.4	Diffuser	272
6.1.5	Color Design and Control in LED Applications	277
6.2	Thermal Management	287
6.2.1	Analysis of System Thermal Resistance	287
6.2.2	Types of Heat Dissipation to Environment	293
6.2.3	Design and Optimization of Fin Heat Sink	298
6.2.4	Design Examples of Thermal Management of Typical LED Lighting Systems	303
6.3	Drive Circuit and Intelligent Control Design	311
6.3.1	Typical LED Wireless Intelligent Control System	311
6.3.2	Working Principles of Wireless Intelligent Control System	312
6.4	Summary	313
	References	313
7	LED Measurement and Standards	317
7.1	Review of Measurement for LED Light Source	317
7.2	Luminous Flux and Radiant Flux	318
7.3	Measurement for Luminous Intensity	319
7.4	LED Chromaticity Coordinates	320

7.5	Dominant Wavelength Determination Algorithm	321
7.5.1	Curve Fitting Method	321
7.6	LED Color Purity	322
7.7	Color Temperature and Correlated Color Temperature of Light Source	323
7.8	Automatic Sorting for LEDs	324
7.9	Measurement for LED Road Lights	325
7.9.1	Electrical Characteristics	325
7.9.2	Color Characteristics	326
7.9.3	Light Distribution Characteristics	326
7.9.4	Dynamic Characteristics	326
7.9.5	Test of Reliability	329
7.10	Summary	329
	References	329
 Appendix: Measurement Method for Integral LED Road Lights		
Approved by China Solid State Lighting Alliance		331
 Index		 349
