PREFACE		xvii
CHAPTER 1	Groundwater: The Big Picture	1
1.1	Introduction	1
1.2	Global Water Reservoirs and Fluxes	4
1.3	Terminology for Subsurface Waters	7
1.4	Fluxes Affecting Groundwater	8
1.4.1	Infiltration and Recharge	9
1.4.2	Evapotranspiration	10
1.4.3	Groundwater Discharge to Surface Water Bodies	12
1.4.4	Pumping	13
1.5	Hydrologic Balance	13
1.6	Water and Groundwater Use	16
1.7	What Groundwater Scientists Do	18
1.8	Problems	19
CHAPTER 2	Physical Properties	23
2.1	Introduction	23
2.2	Properties of Water	23
2.2.1	Density and Compressibility	24
2.2.2	Viscosity	26
2.2.3	Surface Tension and Capillarity	27
2.3	Properties of Air	28
2.4	Properties of Porous Media	29
2.4.1	Porosity	29
2.4.2	Grain Size	32
2.4.3	Volumetric Water Content and Bulk Density	33
2.5	Energy and Hydraulic Head	35
2.5.1	Hydrostatics	38

2.6	Measuring Hydraulic Head with Wells and Piezometers	39
2.7	Problems	42
CHAPTER 3	Principles of Flow	47
3.1	Introduction	47
3.2	Darcy's Law and Hydraulic Conductivity	48
3.2.1	Specific Discharge and Average Linear Velocity	51
3.2.2	Darcy's Law in Three Dimensions	52
3.3	Intrinsic Permeability and Conductivity of Other Fluids	55
3.4	Limits on the Application of Darcy's Law	56
3.4.1	The Continuum Assumption	56
3.4.2	Laminar and Turbulent Flow	58
3.5	Heterogeneity and Anisotropy of Hydraulic Conductivity	59
3.6	Estimating Average Hydraulic Conductivities	63
3.7	Transmissivity	67
3.8	Measuring Hydraulic Conductivity	68
3.8.1	Correlations of Grain Size to Hydraulic Conductivity	68
3.8.2	Laboratory Hydraulic Conductivity Tests	70
3.8.3	Slug Tests and Pumping Tests	73
3.8.4	Tracer Tests	73
3.8.5	Modeling Natural Systems	75
3.9	Flow in Fractured Rock	75
3.10	Unsaturated Flow	77
3.10.1	Water Content and Pressure	77
3.10.2	Measuring Pressures below Atmospheric	81
3.10.3	Water Content, Hydraulic Conductivity, and Darcy's Law	82
3.11	Flow of Groundwater with Variable Density	83
3.11.1	Fresh-Salt Water Interfaces in Coastal Aquifers	85
3.12	Problems	90
CHAPTER 4	Field Exploration and Wells	97
4.1	Introduction	97
4.2	Exploring the Subsurface	97
4.2.1	Excavation	98
4.2.2	Direct-Push Probes	98
4.2.3	Jetted Wells	101

4.2.4	Drilling	101
4.2.5	Resistivity, Electromagnetic, and Radar Surveys	105
4.2.6	Seismic Refraction Surveys	108
4.2.7	Borehole Logging	109
4.3	Wells	112
4.3.1	Well Construction	112
4.3.2	Horizontal Collector Wells	116
4.3.3	Development, Screens, and Filter Packs	116
4.3.4	Packers and Liners	119
4.4	Problems	121
CHAPTER 5	Hydrology and Geology	123
5.1	General Patterns of Groundwater Flow	124
5.1.1	Aquifers and Confining Layers	124
5.1.2	Recharge and Discharge	125
5.1.3	Water Table and Potentiometric Surface Maps	128
5.1.4	Crustal-Scale Pore Fluid Flow	130
5.2	Surface Water Hydrology and Groundwater/Surface Water Interaction	132
5.2.1	Measuring and Estimating Stream Discharge	132
5.2.2	Stream Hydrographs, Baseflow, and Quickflow	138
5.2.3	Discharges between Groundwater and Surface Water	141
5.2.4	Stream Flooding	144
5.2.5	Spatial and Temporal Variations in Recharge	148
5.2.6	Estimating Recharge Rates	150
5.3	Groundwater in Unconsolidated Deposits	154
5.3.1	The High Plains Aquifer	158
5.3.2	New Jersey Coastal Plain	163
5.3.3	Western Cape Cod Glacial Deposits	165
5.4	Groundwater in Sedimentary Rocks	168
5.4.1	The Dakota Sandstone Aquifer	172
5.4.2	Karst at Mammoth Cave, Kentucky	174
5.5	Groundwater in Igneous and Metamorphic Rocks	176
5.5.1	Columbia Plateau Basalts, Northwest U.S.	178
5.6	Frozen Ground and Permafrost	181
5.7	Problems	184

CHAPTER 6	Deformation, Storage, and General Flow Equations	187
6.1	Introduction	187
6.2	Effective Stress	188
6.3	Atmospheric Pressure Fluctuations	190
6.4	Excavation Instability and Liquefaction	193
6.5	Slope Instability	195
6.5.1	Vaiont Reservoir Slide	197
6.6	Earthquakes and Groundwater Pressures	198
6.7	Matrix Compression	201
6.7.1	Subsidence in the San Joaquin Valley	206
6.7.2	Consolidation: Time-Dependent Compression	210
6.7.3	Pore Water Pressures in Sedimentary Basins	214
6.8	Changes in Subsurface Water Storage	217
6.8.1	Elastic Storage	218
6.8.2	Water Table Storage	220
6.8.3	Storage in Aquifers with Fresh–Salt Interfaces	224
6.9	General Flow Equations	225
6.9.1	Three-Dimensional Saturated Flow	225
6.9.2	Two-Dimensional Saturated Flow in Aquifers	229
6.9.3	Three-Dimensional Unsaturated Flow	234
6.10	Overview of Mathematical Modeling	234
6.11	Problems	237
CHAPTER 7	Modeling Steady Flow with Basic Methods	243
7.1	Introduction	243
7.2	Aquifers with Uniform Transmissivity	244
7.2.1	Solution for Uniform Flow	244
7.2.2	Solution for Radial Flow to a Well	246
7.2.3	Solution for Uniform Recharge/Leakage	250
7.2.4	Estimating the Recharge/Transmissivity Ratio	253
7.2.5	Superposition	256
7.2.6	Capture Zone of a Well in Uniform Flow	257
7.2.7	Wells near Straight Constant Head Boundaries	262
7.2.8	Wells near Straight Impermeable Boundaries	266

7.2.9	Wells near Circular Constant Head Boundaries	270
7.2.10	Analyzing the Long-Term Drawdown of Wells	273
7.3	Vertical Plane Flow	275
7.4	Flow Net Graphical Solutions	278
7.4.1	Boundary Conditions	279
7.4.2	Discharges	280
7.4.3	How to Draw Flow Nets	282
7.4.4	Anisotropic Systems	283
7.4.5	Deciding Whether to Use a One-, Two-, or Three-Dimensional Model	287
7.5	Unconfined Aquifers with a Horizontal Base	289
7.5.1	Solutions for Uniform Flow, Radial Flow, and Uniform Recharge	289
7.5.2	Superposition and Imaging	293
7.6	Problems	296

CHAPTER 8	Modeling Transient Well Hydraulics and Mounding	305
8.1	Introduction	305
8.2	Slug Tests	306
8.2.1	Cooper et al. Method for Wells Screened below the Water Table	308
8.2.2	Dagan Method for Wells Screened across the Water Table	312
8.2.3	Other Methods and Less Common Circumstances	315
8.2.4	Issues and Guidelines for Slug Tests	316
8.3	Transient Response of Aquifers to Pumping	318
8.3.1	The Theis Nonleaky Aquifer Solution	318
8.3.2	The Hantush–Jacob Solution for a Leaky Aquifer with No Aquitard Storage	324
8.3.3	The Hantush Solution for a Leaky Aquifer with Aquitard Storage	326
8.3.4	The Neuman Solution for an Unconfined Aquifer	328
8.4	Pumping Test Analysis	330
8.4.1	Log–Log Curve Matching	331
8.4.2	Semilog Drawdown vs. Time	337
8.4.3	Pseudo-Steady Drawdown vs. Distance	339

Contents

8.4.4	Constant-Drawdown Variable Discharge Test	340
8.5	Additional Considerations for Pumping Tests	341
8.5.1	Superposition in Space—Multiple Wells and Aquifer Boundaries	342
8.5.2	Superposition in Time—Variable Pumping Rates at a Well	344
8.5.3	Partial Penetration and Hydraulics near the Pumping Well	347
8.6	Transient Mounding under a Rectangular Recharge Area	349
8.7	Problems	352
CHAPTER 9	Computer-Assisted Flow Modeling	359
9.1	Introduction	359
9.2	Finite Difference Method	360
9.2.1	Finite Difference Equations	362
9.2.2	Boundary Conditions	369
9.2.3	Example Model	371
9.3	Finite Element Method	374
9.3.1	Finite Element Equations	379
9.3.2	Boundary Conditions	383
9.4	Analytic Element Method	384
9.4.1	Equations for Two-Dimensional Aquifer Flow	385
9.4.2	Common Elements	392
9.4.3	Example Model	398
9.5	Strengths and Limitations of These Methods	400
9.6	Modeling Process	403
9.6.1	Conceptual Models, Parameters, and Complexity	404
9.6.2	Model Calibration and Parameter Estimation	407
9.6.3	Model Results, Predictions, and Uncertainty	410
9.7	Problems	413
CHAPTER 10	Groundwater Chemistry	421
10.1	Introduction	421
10.2	Molecular Properties of Water	423
10.3	Solute Concentration Units	425
10.4	Natural Solutes	427

10.4.1	Inorganic Solutes	427
10.4.2	Electroneutrality	431
10.4.3	Presenting Inorganic Data Graphically	431
10.4.4	Organic Solutes	434
10.5	Chemical Reactions	436
10.5.1	Equilibrium	436
10.5.2	Activity and Effective Concentration	439
10.5.3	Reaction Rates and Deviation from Equilibrium	441
10.6	Mineral Dissolution and Precipitation	445
10.7	Gas–Water Partitioning	447
10.8	Aqueous-Phase Reactions	450
10.8.1	pH, Acids, and Bases	450
10.8.2	Carbonate Reactions and Alkalinity	452
10.8.3	Metal Complexes	456
10.8.4	Oxidation and Reduction	458
10.8.5	Biogeochemical Redox Reactions	463
10.9	Sorption	465
10.9.1	Surface Complexation of Ions	466
10.9.2	Nonpolar Organic Compounds	471
10.10	Isotopes	476
10.10.1	Stable Isotopes and Water Origins	476
10.10.2	Radioisotopes and Age Dating	478
10.10.3	Groundwater Records of Paleoclimate	484
10.11	Examples of Natural Groundwater Chemistry Processes	485
10.11.1	Floridan Aquifer: Regional Scale	485
10.11.2	Floridan Aquifer: Local Scale	488
10.11.3	Milk River Aquifer	490
10.12	Problems	494
CHAPTER 11	Groundwater Contamination	499
11.1	Introduction	499
11.2	Contamination Sources	500
11.2.1	Leaking Storage Tanks	501
11.2.2	Septic Systems	501
11.2.3	Landfills	503
11.2.4	Others	504
11.3	Organic Contaminants	505
11.3.1	Overview of Migration Patterns	506

Contents

11.3.2	Structure and Occurrence of Common Contaminants	508
11.3.3	Properties of Common Contaminants	512
11.4	Nonaqueous-Phase Liquids	516
11.4.1	Saturation, and Wetting and Nonwetting Fluids	518
11.4.2	Interfacial Tension and Capillary Pressure	519
11.4.3	Capillary Pressure vs. Saturation and Residual Saturation	523
11.4.4	Relative Permeability and Flow of Multiple Phases	526
11.5	Solute Transport Processes	527
11.5.1	Advection and Mechanical Dispersion	527
11.5.2	Molecular Diffusion	529
11.5.3	Sorption	533
11.5.4	Colloid Transport	535
11.6	Case Studies of Solute Transport	537
11.6.1	CFB Borden, Ontario, Tracer Test	537
11.6.2	North Carolina Gasoline and Diesel Spill	542
11.7	Modeling Solute Transport	545
11.7.1	Modeling Dispersion and Diffusion	547
11.7.2	General Equations for Nonreactive Solutes	551
11.7.3	General Equations for Reactive Solutes	553
11.7.4	Boundary Conditions	555
11.7.5	One-Dimensional Solution for a Step Inlet Source	556
11.7.6	Solution for a Pulse Point Source	559
11.7.7	Other More Complex Solutions	560
11.8	Investigating Contamination	561
11.8.1	Sampling Groundwater	561
11.8.2	Sampling Pore Gases	564
11.8.3	Electromagnetic Surveys	565
11.8.4	Investigating NAPLs	566
11.9	Remediating Contamination	567
11.9.1	Source Removal or Isolation	568
11.9.2	NAPL Recovery	570
11.9.3	Hydraulic Control of Solute Plumes	571
11.9.4	Soil Vapor Extraction	573
11.9.5	Bioremediation	577
11.9.6	Engineered In Situ Reaction Zones	579
11.10	Problems	581

CHAPTER 12	Subsurface Heat Flow and Geothermal Energy . . .	587
12.1	Introduction	587
12.2	Energy and Heat Flow Processes	588
12.2.1	Conduction	591
12.2.2	Advection	592
12.2.3	General Equations of Energy and Heat Flow	593
12.2.4	Modeling Heat Flow	594
12.2.5	Analytic Model of Steady One-Dimensional Heat Flow	595
12.2.6	Analytic Model of Transient Cyclic One-Dimensional Heat Flow	598
12.3	Crustal Temperatures and Heat Flow	600
12.4	Shallow Temperatures	602
12.4.1	Climate Change Impacts	602
12.4.2	Recharge and Discharge Impacts	604
12.5	Hydrothermal Systems and Geysers	607
12.6	Geothermal Energy	612
12.6.1	Geothermal Electric Power	612
12.6.2	Underground Thermal Energy Storage and Heat Pumps	614
12.7	Problems	617
	Appendix A: Units and Conversions	621
A.1	Length [L]	621
A.2	Area [L^2]	621
A.3	Volume [L^3]	621
A.4	Time [T]	621
A.5	Mass [M] and Weight [ML/T^2] at Earth's Surface	622
A.6	Force [ML/T^2]	622
A.7	Pressure or Stress [M/LT^2]	622
A.8	Energy [ML^2/T^2]	622
A.9	Power [ML^2/T^3]	622
A.10	Angle	622
A.11	Temperature	623
A.12	Velocity and Hydraulic Conductivity [L/T]	623
A.13	Transmissivity [L^2/T]	623
A.14	Discharge (Flow Rate) [L^3/T]	623
A.15	Unit Prefixes	623
A.16	Performing Unit Conversions	624

Contents

Appendix B: Mathematics Primer	625
B.1 Algebra and Geometry	625
B.2 Functions of One Variable	626
B.3 Formulas for Common Derivatives	626
B.4 Functions of Two or More Variables	627
Appendix C: Book Website	629
Answers to Selected Problems	631
References	641
Index	665
