Preface	vi
To the Student and Safety Guidelines	viii
Laboratory Rules and Safety Procedures	ix

EXPERIMENTS

1. Laboratory Techniques	1
2. Measurements	11
3. Preparation and Properties of Oxygen	23
4. Preparation and Properties of Hydrogen	33
5. Calorimetry and Specific Heat	43
6. Freezing Points—Graphing of Data	51
7. Water in Hydrates	61
8. Water, Solutions, and pH	67
9. Properties of Solutions	83
10. Composition of Potassium Chlorate	93
11. Double Displacement Reactions	99
12. Single Displacement Reactions	105
13. Ionization-Electrolytes and pH	109
14. Identification of Selected Anions	123
15. Quantitative Preparation of Potassium Chloride	131
16. Electromagnetic Energy and Spectroscopy	137
17. Lewis Structures and Molecular Models	147
18. Boyle's Law	159
19. Charles' Law	169
20. Liquids: Vapor Pressure and Boiling Points	179
21. Molar Volume of a Gas	187
22. Neutralization—Titration I	193
23. Neutralization—Titration II	201
24. Chemical Equilibrium-Reversible Reactions	209
25. Heat of Reaction	217
26. Distillation of Volatile Liquids	225
27. Boiling Points and Melting Points	235
28. Hydrocarbons	241
29. Alcohols, Esters, Aldehydes, and Ketones	251

30. Esterification—Distillation: Synthesis of n-Butyl Acetate	259
31. Synthesis of Aspirin	269
32. Amines and Amides	275
33. Polymers—Macromolecules	285
34. Carbohydrates	293
35. Glucose Concentration in Sheep Blood	305
36. Amino Acids and Proteins	311
37. Paper Chromatography	321
38. Ion-Exchange Chromatography of Amino Acids	329
39. Identification of an Unknown Amino Acid by Titration	337
40. Enzymatic Catalysis-Catalase	349
41. Lipids	355
42. Cholesterol Levels in Sheep Blood	365

STUDY AIDS

1. Significant Figures	373
2. Formulas and Chemical Equations	375
3. Preparing and Reading A Graph	379
4. Using a Scientific Calculator	391
5. Dimensional Analysis and Stoichiometry	397
6. Organic Chemistry—An Introduction	403

EXERCISES

1. Significant Figures and Exponential Notation	407
2. Measurements	409
3. Names and Formulas I	411
4. Names and Formulas II	413
5. Names and Formulas III	415
6. Equation Writing and Balancing I	417
7. Equation Writing and Balancing II	419
8. Equation Writing and Balancing III	421
9. Graphical Representation of Data	423
10. Moles	425
11. Stoichiometry I	427
12. Gas Laws	429
13. Solution Concentrations	431

14. Stoichiometry II.	433
15. Chemical Equilibrium.	435
16. Oxidation-Reduction Equations I.	437
17. Oxidation-Reduction Equations II.	439
18. Hydrocarbons.	441
19. Alcohols, Esters, Aldehydes, and Ketones	443
20. Functional Groups	445
21. Synthetic Polymers	447
22. Carbohydrates	449
23. Amino Acids and Polypeptides	451
24. Lipids	453
25. Molecular Models and Isomerism	455
26. Stereoisomerism—Optical Isomers	459

APPENDICES

1. Suggested List of Equipment	465
2. List of Reagents Required and Preparation of Solutions	467
3. Special Equipment or Preparations Needed	474
4. Units of Measurements.	480
5. Solubility Table	481
6. Vapor Pressure of Water	482
7. Boiling Points of Liquids	482
8. Waste Disposal Requirements for Each Experiment	483
Periodic Table of Elements	486
Atomic Masses of the Elements	487
Names, Formulas, and Charges of Common Ions	488
