

CONTENTS

Preface	V	4.3 More on the Cross Product	207
Chapter 1 Systems of Linear Equations	1	4.4 Linear Operations on $\mathbb{R}^3$	213
1.1 Solutions and Elementary Operations.....	1	4.5 An Application to Computer Graphics.....	219
1.2 Gaussian Elimination	9	Supplementary Exercises for Chapter 4	222
1.3 Homogeneous Equations	18	Chapter 5 The Vector Space $\mathbb{R}^n$	223
1.4 An Application to Network Flow.....	24	5.1 Subspaces and Spanning.....	223
1.5 An Application to Electrical Networks.....	26	5.2 Independence and Dimension.....	229
1.6 An Application to Chemical Reactions.....	28	5.3 Orthogonality	239
Supplementary Exercises for Chapter 1	29	5.4 Rank of a Matrix.....	246
Chapter 2 Matrix Algebra	31	5.5 Similarity and Diagonalization.....	254
2.1 Matrix Addition, Scalar Multiplication, and Transposition	31	5.6 Best Approximation and Least Squares	265
2.2 Equations, Matrices, and Transformations.....	41	5.7 An Application to Correlation and Variance ..	275
2.3 Matrix Multiplication	55	Supplementary Exercises for Chapter 5	280
2.4 Matrix Inverses	67	Chapter 6 Vector Spaces.....	281
2.5 Elementary Matrices	82	6.1 Examples and Basic Properties	281
2.6 Matrix Transformations.....	89	6.2 Subspaces and Spanning Sets	289
2.7 LU-Factorization.....	100	6.3 Linear Independence and Dimension.....	295
2.8 An Application to Input-Output Economic Models	109	6.4 Finite Dimensional Spaces	303
2.9 An Application to Markov Chains	114	6.5 An Application to Polynomials	311
Supplementary Exercises for Chapter 2	122	6.6 An Application to Differential Equations.....	315
Chapter 3 Determinants and Diagonalization.....	124	Supplementary Exercises for Chapter 6	320
3.1 The Cofactor Expansion	124	Chapter 7 Linear Transformations.....	321
3.2 Determinants and Matrix Inverses.....	135	7.1 Examples and Elementary Properties.....	321
3.3 Diagonalization and Eigenvalues	147	7.2 Kernel and Image of a Linear Transformation.....	328
3.4 An Application to Linear Recurrences	165	7.3 Isomorphisms and Composition	336
3.5 An Application to Systems of Differential Equations	170	7.4 A Theorem about Differential Equations	344
3.6 Proof of the Cofactor Expansion Theorem ...	176	7.5 More on Linear Recurrences	348
Supplementary Exercises for Chapter 3	180	Chapter 8 Orthogonality	356
Chapter 4 Vector Geometry	181	8.1 Orthogonal Complements and Projections....	356
4.1 Vectors and Lines	181	8.2 Orthogonal Diagonalization	363
4.2 Projections and Planes.....	195	8.3 Positive Definite Matrices.....	372
		8.4 QR-Factorization.....	376
		8.5 Computing Eigenvalues	380
		8.6 Complex Matrices.....	384

Contents

8.7	Finite Fields and Linear Codes.....	394
8.8	An Application to Quadratic Forms	407
8.9	An Application to Constrained Optimization.....	417
8.10	An Application to Statistical Principal Component Analysis	420

Chapter 9 Change of Basis422

9.1	The Matrix of a Linear Transformation.....	422
9.2	Operators and Similarity	430
9.3	Invariant Subspaces and Direct Sums.....	439

Chapter 10 Inner Product Spaces452

10.1	Inner Products and Norms	452
10.2	Orthogonal Sets of Vectors	460
10.3	Orthogonal Diagonalization	469
10.4	Isometries.....	476
10.5	An Application to Fourier Approximation ..	487

Chapter 11 Canonical Forms492

11.1	Block Triangular Form.....	493
11.2	The Jordan Canonical Form.....	499

Appendix A Complex Numbers505

Appendix B Proofs518

Appendix C Mathematical Induction523

Appendix D Polynomials.....528
