Preface

xiii

CHAPTER 1

Introduction	1
1.1 Operating Bands	2
1.1.1 E-UTRA Absolute Radio Frequency Channel Number (EARFCN)	4
1.2 Network Architecture	5
1.2.1 Evolved UMTS Terrestrial Radio Access Network (E-UTRAN)	6
1.2.2 Evolved Packet Core (EPC)	8
1.2.3 Tracking Area and MME Pool Area	10
1.3 Protocol Stack	11
1.3.1 Control Plane	11
1.3.2 User Plane	13
1.4 Heterogeneous Network	13
1.4.1 Home eNodeB	15
1.4.2 Relay	17
1.5 UE Positioning	18
1.5.1 Network Architecture	18
1.5.2 Positioning Techniques	19
1.6 Basic Definitions	21
1.6.1 Radio Signal Measurement	21
1.6.2 Identities in Network	21
1.6.3 Identities on UE Side	22

CHAPTER 2

Information Bearer	27
2.1 Channels and Signals	27
2.1.1 Logical Channels	27
2.1.2 Transport Channels	28
2.1.3 Physical Channels	28
2.1.4 Physical Signals	29
2.2 Radio Bearer	29
2.2.1 Signaling Radio Bearer (SRB)	29

2.2.2	Data Radio Bearer (DRB)	31
2.3	Mapping Among Channels and Bearers	32
2.4	EPS Bearer	34
2.4.1	Service Data Flow (SDF) and Traffic Flow Template (TFT)	35
2.4.2	QoS Profile	36
2.4.2.1	Allocation and Retention Priority (ARP)	36
2.5	Piggybacking of Control Messages	39
2.5.1	Piggybacking of NAS Messages	39
2.5.2	Piggybacking of RRC Messages	40
2.6	NAS Layer States	41
2.6.1	EPS Mobility Management (EMM) States	41
2.6.2	EPS Session Management (ESM) States	42

CHAPTER 3

	Physical Layer Properties	43
3.1	OFDMA for Downlink	43
3.1.1	Implications of OFDMA	44
3.1.2	Transmission and Reception	46
3.2	Downlink Time-Frequency Resource Grid	48
3.2.1	Radio Frame Structure	48
3.2.2	Resource Block (RB)	51
3.3	Downlink Physical Layer Process	53
3.4	SC-FDMA for Uplink	54
3.4.1	SC-FDMA Transmission	55
3.4.2	SC-FDMA Reception	56
3.5	Uplink Transmission Features	57

CHAPTER 4

	System Information	59
4.1	Mapping Among Layers	59
4.2	Required System Information	60
4.3	MIB Message	61
4.4	SIB Type 1 Message	61
4.5	SI Messages	62
4.5.1	Scheduling	62
4.5.2	Modification	63

CHAPTER 5

	Physical Channels and Signals	67
5.1	Downlink Physical Channels and Signals	67
5.1.1	Physical Broadcast Channel (PBCH)	68
5.1.2	Physical Control Format Indicator Channel (PCFICH)	68
5.1.3	Physical Downlink Control Channel (PDCCH)	69
5.1.4	Physical Hybrid ARQ Indicator Channel (PHICH)	77
5.1.5	Reference Signals	80

5.2	Uplink Physical Channels and Signals	87
5.2.1	Uplink Reference Signals	87
5.2.2	Physical Uplink Control Channel (PUCCH)	91
5.2.3	Physical Random Access Channel (PRACH)	94

CHAPTER 6

	Medium Access Control	101
6.1	MAC Layer Functions	101
6.2	MAC Protocol Data Unit (PDU)	102
6.2.1	Basic MAC PDU Format	102
6.2.2	Special Format for MAC PDU	111

CHAPTER 7

	Radio Link Control (RLC)	117
7.1	Transparent Mode (TM)	117
7.1.1	TM Functions	118
7.1.2	TM PDU Format	119
7.2	Unacknowledged Mode (UM)	119
7.2.1	UM Functions	119
7.2.2	UM PDU Format	122
7.3	Acknowledged Mode (AM)	125
7.3.1	AM Functions	125
7.3.2	AM PDU Format	130

CHAPTER 8

	Packet Data Convergence Protocol (PDCP)	137
8.1	PDCP Layer Functions	137
8.1.1	Processing the Data Packet	137
8.1.2	Security Function	138
8.1.3	Header Compression	139
8.1.4	Discard of Data Packets	143
8.1.5	Proper Delivery of Packets After Handover and Temporary Radio Link Failure	144
8.2	PDCP Protocol Data Unit (PDU)	145
8.2.1	PDCP Data PDU	145
8.2.2	PDCP Control PDU	146

CHAPTER 9

	Powering Up UE	149
9.1	Cell Selection	149
9.1.1	Initial Cell Selection	149
9.1.2	Stored Information Cell Selection	153
9.2	Network Services	153

CHAPTER 10

Synchronization	155
10.1 Downlink Synchronization	155
10.1.1 Scheduling PSS and SSS	155
10.1.2 Physical Cell Identifier (PCI)	156
10.1.3 PSS Sequence	156
10.1.4 SSS Sequence	157
10.2 Uplink Synchronization	158
10.2.1 Establishment of Timing Alignment	159
10.2.2 Maintenance of Timing Alignment	161

CHAPTER 11

Random Access	163
11.1 Configuration of Random Access	163
11.2 Contention-Based Random Access	164
11.2.1 Transmission of the Random Access Preamble	165
11.2.2 Random Access Response (RAR)	167
11.2.3 Message 3	168
11.2.4 Contention Resolution	169
11.3 Noncontention-Based Random Access	171
11.3.1 Assignment of the Random Access Preamble	172
11.3.2 Transmission of the Random Access Preamble	173
11.3.3 RAR	173

CHAPTER 12

NAS and AS Layer Security	175
12.1 EPS Security Context	176
12.2 EPS Authentication and Key Agreement (EPS AKA)	176
12.3 Security in the NAS Layer	178
12.4 Security in the AS Layer	179
12.4.1 Security Activation	179
12.4.2 COUNT	180
12.4.3 Ciphering	181
12.4.4 Integrity Protection	181

CHAPTER 13

Paging	183
13.1 Mapping Among Layers	184
13.2 Indication of Paging Messages	184
13.3 Default Paging Cycle	185
13.3.1 Allocation of the Paging Frame	186
13.3.1 Allocation of the Paging Occasion	186
13.4 Paging Message	186

CHAPTER 14

NAS Signaling Connection	189
14.1 RRC Connection	189
14.1.1 RRC Connection Establishment	190
14.1.2 RRC Connection Release	193
14.1.3 Radio Link Failure (RLF)	193
14.1.4 RRC Connection Reestablishment	195
14.1.5 RRC Connection Reconfiguration	198
14.2 MME Selection	198
14.3 S1-MME Connection	199
14.3.1 S1 Setup	199
14.3.2 UE-Associated Logical S1-Connection Setup	200
14.4 NAS Signaling Connection Release	201

CHAPTER 15

Attach and Detach	205
15.1 Initial Attach Procedure	205
15.1.1 NAS Signaling Connection Establishment and Attach Request	206
15.1.2 User Identification	211
15.1.3 Authentication and NAS Security Activation	211
15.1.4 ME Identity Check	212
15.1.5 Old EPS Bearer Context Delete	212
15.1.6 Location Update	212
15.1.7 PDN Connection Establishment	213
15.2 Independent GUTI Reallocation	223
15.3 Detach Procedure	224
15.3.1 UE-Initiated Detach Procedure	225
15.3.2 MME Initiated Detach Procedure	227

CHAPTER 16

Discontinuous Reception	231
16.1 DRX in the RRC_IDLE State	231
16.2 DRX in the RRC_CONNECTED State	231
16.2.1 Configuration of the DRX Cycle	232
16.2.2 Continuous Reception and Resumption of DRX	233
16.2.3 HARQ During DRX	233
16.2.4 Active Time	234

CHAPTER 17

Uplink Power Control	235
17.1 Uplink Power Control Considerations	235
17.2 Power Control on the PUSCH	237
17.2.1 Semistatically Configurable Terms	238
17.2.2 Dynamically Configurable Terms	239

17.3	Power Control on PUCCH	244
17.3.1	Semistatically Configurable Terms	244
17.3.2	Dynamically Configurable Terms	245

CHAPTER 18

	Multiple Antenna Techniques in the Downlink	249
18.1	Transmit Diversity: Transmission Mode 2	252
18.2	Spatial Multiplexing	255
18.2.1	Single-User MIMO (SU-MIMO)	256
18.2.2	Multiple Users MIMO (MU-MIMO): Transmission Mode 5	262
18.3	Beamforming: Transmission Mode 6 and 7	262
18.3.1	Transmission Mode 7	263
18.3.2	Transmission Mode 6	264

CHAPTER 19

	Scheduling and Allocation of Resources	265
19.1	Scheduling Decision	265
19.1.1	Information for the Scheduling Decision	266
19.1.2	Considerations in Scheduling Decision	266
19.2	Resource Allocation Procedure	271
19.2.1	Downlink Allocation	272
19.2.2	Uplink Allocation	275
19.3	Apportionment of Resources Among Logical Channels	279

CHAPTER 20

	Basic Activities During Data Transfer	283
20.1	Feedback from the UE	284
20.1.1	Aperiodic CQI/PMI/RI Reporting	286
20.1.2	Periodic CQI/PMI/RI Reporting	286
20.2	Link Adaptation	289
20.3	Hybrid Automatic Repeat Request (HARQ)	292
20.3.1	HARQ Process	292
20.3.2	Interrelationship Between HARQ and ARQ	296
20.3.3	HARQ Information on the PDCCH	297
20.3.4	Types of HARQ Retransmissions	297
20.3.5	HARQ for the Downlink Transmission	298
20.3.6	HARQ for the Uplink Transmission	299

CHAPTER 21

	Data Transfer Session Setup	301
21.1	Service Request Procedure	302
21.1.1	UE-Triggered Service Request	302
21.1.2	Network-Triggered Service Request	305
21.2	Dedicated EPS Bearer Setup	306

21.2.1	Network-Initiated Dedicated EPS Bearer Setup	306
21.2.2	UE-Requested Dedicated EPS Bearer Setup	309
21.3	Voice Services	310
21.3.1	Voice Service Solutions	310
21.3.2	CSFB Procedure	312
21.4	Short Message Service (SMS)	318
21.4.1	SMS Solutions	318
21.4.2	SMS over the SGs Procedure	318

CHAPTER 22

	Tracking Area Update	323
22.1	NAS Signaling Connection Establishment and TAU Request	326
22.2	UE Context Update	327
22.3	Bearer Update	328
22.4	Updating HSS	329
22.5	Tracking Area Update Accept	330
22.6	S1 Release	331

CHAPTER 23

	Change of Cell	333
23.1	Neighbor Cells	333
23.2	Cell Reselection	334
23.2.1	Measurement of Neighbor Cells	336
23.2.2	Cell Reselection Criteria	339
23.3	HANDOVER	343
23.3.1	Types of Handover	344
23.3.2	Measurement and Reporting	346
23.3.3	Intra-E-UTRAN Handover Procedure	362
23.3.4	Inter-RAT Handover Procedure	369

CHAPTER 24

	Multimedia Broadcast Multicast Service	381
24.1	Multicell Transmission	381
24.2	Network Architecture	382
24.3	Mapping Among Layers	384
24.4	SIB Type 13	385
24.5	MCCH	386
24.5.1	Scheduling	386
24.5.2	MCS Configuration	387
24.5.3	Modification	387
24.6	MBMS Service and MBMS Session	389
24.6.1	Session Start	390
24.6.2	Session Stop	391
24.7	PMCH	391

CHAPTER 25

Coordination Among Cells	395
25.1 Intercell Interference Coordination (ICIC)	395
25.1.1 Exchange of Information to Support ICIC	396
25.1.2 Fractional Frequency Reuse (FFR)	397
25.2 Load Balancing Among Cells	399
25.3 Load Balancing and Rebalancing Among MMEs	401
25.4 Self-Optimizing Networks (SON)	402
25.4.1 Self-Configuration (SC)	402
25.4.2 Self-Optimization (SO)	403

CHAPTER 26

Public Warning System	405
26.1 Earthquake and Tsunami Warning System (ETWS)	405
26.2 Commercial Mobile Alert Service (CMAS)	406
26.3 PWS Notification	406
26.4 SIB Content for PWS	407

Appendix A: Major Information Elements (IEs) on RRC Messages	409
A.1 IEs on SIB Type 2	409
A.2 IEs on RadioResourceConfigDedicated IE	409
A.3 IEs Used During Handover	409

Acronyms	413
Bibliography	419
About the Author	423
Index	425
