Space Antenna

HANDBOOK

 WILEY

Contents

<i>Preface</i>	xvii
<i>Acknowledgments</i>	xix
<i>Acronyms</i>	xxi
<i>Contributors</i>	xxv
1 Antenna Basics	1
<i>Luigi Boccia and Olav Breinbjerg</i>	
1.1 Introduction	1
1.2 Antenna Performance Parameters	2
1.2.1 Reflection Coefficient and Voltage Standing Wave Ratio	2
1.2.2 Antenna Impedance	3
1.2.3 Radiation Pattern and Coverage	4
1.2.4 Polarization	6
1.2.5 Directivity	7
1.2.6 Gain and Realized Gain	8
1.2.7 Equivalent Isotropically Radiated Power	8
1.2.8 Effective Area	9
1.2.9 Phase Center	9
1.2.10 Bandwidth	9
1.2.11 Antenna Noise Temperature	9
1.3 Basic Antenna Elements	10
1.3.1 Wire Antennas	10
1.3.2 Horn Antennas	10
1.3.3 Reflectors	15
1.3.4 Helical Antennas	17
1.3.5 Printed Antennas	19
1.4 Arrays	26
1.4.1 Array Configurations	28
1.5 Basic Effects of Antennas in the Space Environment	30
1.5.1 Multipaction	30
1.5.2 Passive Inter-modulation	31
1.5.3 Outgassing	31
References	32

2	Space Antenna Modeling	36
	<i>Jian Feng Zhang, Xue Wei Ping, Wen Ming Yu, Xiao Yang Zhou, and Tie Jun Cui</i>	
2.1	Introduction	36
2.1.1	Maxwell's Equations	37
2.1.2	CEM	37
2.2	Methods of Antenna Modeling	39
2.2.1	Basic Theory	39
2.2.2	Method of Moments	40
2.2.3	FEM	45
2.2.4	FDTD Method	49
2.3	Fast Algorithms for Large Space Antenna Modeling	54
2.3.1	Introduction	54
2.3.2	MLFMA	54
2.3.3	Hierarchical Basis for the FEM	62
2.4	Case Studies: Effects of the Satellite Body on the Radiation Patterns of Antennas	68
2.5	Summary	73
	Acknowledgments	73
	References	73
3	System Architectures of Satellite Communication, Radar, Navigation and Remote Sensing	76
	<i>Michael A. Thorburn</i>	
3.1	Introduction	76
3.2	Elements of Satellite System Architecture	76
3.3	Satellite Missions	77
3.4	Communications Satellites	77
3.4.1	Fixed Satellite Services	77
3.4.2	Broadcast Satellite Services (Direct Broadcast Services)	78
3.4.3	Digital Audio Radio Services	78
3.4.4	Direct to Home Broadband Services	78
3.4.5	Mobile Communications Services	78
3.5	Radar Satellites	79
3.6	Navigational Satellites	79
3.7	Remote Sensing Satellites	80
3.8	Architecture of Satellite Command and Control	80
3.9	The Communications Payload Transponder	80
3.9.1	Bent-Pipe Transponders	81
3.9.2	Digital Transponders	81
3.9.3	Regenerative Repeater	81
3.10	Satellite Functional Requirements	81
3.10.1	Key Performance Concepts: Coverage, Frequency Allocations	82
3.10.2	Architecture of the Communications Payload	82
3.10.3	Satellite Communications System Performance Requirements	83
3.11	The Satellite Link Equation	83
3.12	The Microwave Transmitter Block	84
3.12.1	Intercept Point	85
3.12.2	Output Backoff	86
3.12.3	The Transmit Antenna and EIRP	87

3.13	Rx Front-End Block	88
3.13.1	Noise Figure and Noise Temperature	88
3.14	Received Power in the Communications System's RF Link	90
3.14.1	The Angular Dependencies of the Uplink and Downlink	91
3.15	Additional Losses in the Satellite and Antenna	91
3.15.1	Additional Losses due to Propagation Effects and the Atmosphere	91
3.15.2	Ionospheric Effects – Scintillation and Polarization Rotation	93
3.16	Thermal Noise and the Antenna Noise Temperature	93
3.16.1	The Interface between the Antenna and the Communications System	93
3.16.2	The Uplink Signal to Noise	94
3.17	The SNR Equation and Minimum Detectable Signal	94
3.18	Power Flux Density, Saturation Flux Density and Dynamic Range	95
3.18.1	Important Relationship between PFD and Gain State of the Satellite Transponder	95
3.19	Full-Duplex Operation and Passive Intermodulation	96
3.20	Gain and Gain Variation	96
3.21	Pointing Error	97
3.22	Remaining Elements of Satellite System Architecture	98
3.23	Orbits and Orbital Considerations	98
3.24	Spacecraft Introduction	100
3.25	Spacecraft Budgets (Mass, Power, Thermal)	101
3.25.1	Satellite Mass	101
3.25.2	Satellite Power	101
3.25.3	Satellite Thermal Dissipation	101
3.26	Orbital Mission Life and Launch Vehicle Considerations	102
3.27	Environment Management (Thermal, Radiation)	102
3.28	Spacecraft Structure (Acoustic/Dynamic)	103
3.29	Satellite Positioning (Station Keeping)	103
3.30	Satellite Positioning (Attitude Control)	104
3.31	Power Subsystem	104
3.32	Tracking, Telemetry, Command and Monitoring	105
	References	105
4	Space Environment and Materials	106
	<i>J. Santiago-Prowald and L. Salghetti Drioli</i>	
4.1	Introduction	106
4.2	The Space Environment of Antennas	106
4.2.1	The Radiation Environment	107
4.2.2	The Plasma Environment	109
4.2.3	The Neutral Environment	110
4.2.4	Space Environment for Typical Spacecraft Orbits	111
4.2.5	Thermal Environment	111
4.2.6	Launch Environment	113
4.3	Selection of Materials in Relation to Their Electromagnetic Properties	117
4.3.1	RF Transparent Materials and Their Use	117
4.3.2	RF Conducting Materials and Their Use	117
4.3.3	Material Selection Golden Rules for PIM Control	118

4.4	Space Materials and Manufacturing Processes	118
4.4.1	Metals and Their Alloys	118
4.4.2	Polymer Matrix Composites	121
4.4.3	Ceramics and Ceramic Matrix Composites	125
4.5	Characterization of Mechanical and Thermal Behaviour	127
4.5.1	Thermal Vacuum Environment and Outgassing Screening	127
4.5.2	Fundamental Characterization Tests of Polymers and Composites	128
4.5.3	Characterization of Mechanical Properties	130
4.5.4	Thermal and Thermoelastic Characterization	131
	Acknowledgements	131
	References	131
5	Mechanical and Thermal Design of Space Antennas	133
	<i>J. Santiago-Prowald and Heiko Ritter</i>	
5.1	Introduction: The Mechanical–Thermal–Electrical Triangle	133
5.1.1	Antenna Product	134
5.1.2	Configuration, Materials and Processes	135
5.1.3	Review of Requirements and Their Verification	136
5.2	Design of Antenna Structures	136
5.2.1	Typical Design Solutions for Reflectors	136
5.2.2	Structural Description of the Sandwich Plate Architecture	143
5.2.3	Thermal Description of the Sandwich Plate Architecture	143
5.2.4	Electrical Description of the Sandwich Plate Architecture in Relation to Thermo-mechanical Design	144
5.3	Structural Modelling and Analysis	144
5.3.1	First-Order Plate Theory	145
5.3.2	Higher Order Plate Theories	148
5.3.3	Classical Laminated Plate Theory	148
5.3.4	Homogeneous Isotropic Plate Versus Symmetric Sandwich Plate	149
5.3.5	Skins Made of Composite Material	150
5.3.6	Honeycomb Core Characteristics	152
5.3.7	Failure Modes of Sandwich Plates	152
5.3.8	Mass Optimization of Sandwich Plate Architecture for Antennas	154
5.3.9	Finite Element Analysis	156
5.3.10	Acoustic Loads on Antennas	159
5.4	Thermal and Thermoelastic Analysis	166
5.4.1	The Thermal Environment of Space Antennas	166
5.4.2	Transverse Thermal Conductance Model of the Sandwich Plate	167
5.4.3	Thermal Balance of the Flat Sandwich Plate	168
5.4.4	Thermal Distortions of a Flat Plate in Space	169
5.4.5	Thermoelastic Stability of an Offset Parabolic Reflector	171
5.4.6	Thermal Analysis Tools	172
5.4.7	Thermal Analysis Cases	173
5.4.8	Thermal Model Uncertainty and Margins	173
5.5	Thermal Control Strategies	173
5.5.1	Requirements and Principal Design Choices	173

5.5.2	Thermal Control Components	174
5.5.3	Thermal Design Examples	176
	Acknowledgements	177

18.1	Overview of Chapter Contents	695
18.2	General Introduction	696
18.3	General Evolution of Space Antenna Needs and Requirements	697
18.4	Develop Large-Aperture Antennas	699
18.4.1	Problem Area and Challenges	699
18.4.2	Present and Expected Future Space Missions	700

18.4.3 Promising Antenna Concepts and Technologies	702
18.5 Increase Telecommunication Satellite Throughput	707
18.5.1 Problem Area and Challenges	707
18.5.2 Present and Expected Future Space Missions	707
18.5.3 Promising Antenna Concepts and Technologies	708
18.6 Enable Sharing the Same Aperture for Multiband and Multipurpose Antennas	709
18.6.1 Problem Area and Challenges	709
18.6.2 Present and Expected Future Space Missions	710
18.6.3 Promising Antenna Concepts and Technologies	710
18.7 Increase the Competitiveness of Well-Established Antenna Products	710
18.7.1 Problem Area and Challenges	710
18.7.2 Present and Expected Future Space Missions	711
18.7.3 Promising Antenna Concepts and Technologies	712
18.8 Enable Single-Beam In-Flight Coverage/Polarization Reconfiguration	713
18.8.1 Problem Area and Challenges	713
18.8.2 Present and Expected Future Space Missions	714
18.8.3 Promising Antenna Concepts and Technologies	714
18.9 Enable Active Antennas at Affordable Cost	715
18.9.1 Problem Area and Challenges	715
18.9.2 Present and Expected Future Space Missions	717
18.9.3 Promising Antenna Concepts and Technologies	718
18.10 Develop Innovative Antennas for Future Earth Observation and Science Instruments	724
18.10.1 Problem Area and Challenges	724
18.10.2 Present and Expected Future Space Missions	725
18.10.3 Promising Antenna Concepts and Technologies	729
18.11 Evolve Towards Mass Production of Satellite and User Terminal Antennas	732
18.11.1 Problem Area and Challenges	732
18.11.2 Present and Expected Future Space Missions	732
18.11.3 Promising Antenna Concepts and Technologies	732
18.12 Technology Push for Enabling New Missions	734
18.12.1 Problem Area and Challenges	734
18.12.2 Promising Antenna Concepts and Technologies	734
18.13 Develop New Approaches for Satellite/Antenna Modelling and Testing	735
18.13.1 Problem Area and Challenges	735
18.13.2 Promising Antenna Concepts and Technologies	736
18.14 Conclusions	737
Acronyms	738
Acknowledgements	740
References	740
