AN A K PETERS BOOK

Contents

Preface	xiii
I Introduction	1
1 Overview	3
1.1 Organization of the Book	4
1.2 Computer Graphics	5
1.3 Vision Science	7
1.4 The Process of Vision	11
1.5 Useful Generalizations about Perception	19
1.6 Issues Specific to Computer Graphics	20
1.7 Suggestions for Further Reading	22
II Building Blocks	25
2 Visual Sensitivity	27
2.1 The Human Eye	28
2.2 Terminology and Units	29
2.3 Acuity	30
2.4 Contrast	34
2.5 Dynamic Range	39
2.6 Issues Specific to Computer Graphics	41
2.7 Suggestions for Further Reading	47

3	2D Image Features	49
3.1	Contour Detection and Appearance	50
3.2	Interpretation of Contours	53
3.3	Spatial Frequency Features	59
3.4	Grouping	62
3.5	Issues Specific to Computer Graphics	66
3.6	Suggestions for Further Reading	69
4	Color	71
4.1	Measuring the Spectral Distribution of Light	72
4.2	The Perception of Color	78
4.3	Issues Specific to Computer Graphics	85
4.4	Suggestions for Further Reading	94
5	2D Motion	95
5.1	Sensing Visual Motion	96
5.2	Image Changes Seen as Motion	97
5.3	Local Ambiguity	104
5.4	Apparent Motion	107
5.5	Eye Movements	111
5.6	Issues Specific to Computer Graphics	112
5.7	Suggestions for Further Reading	115
6	Stereo and Accommodation	117
6.1	The Geometry of Stereo Vision	118
6.2	Depth from Triangulation in the Visual System	120
6.3	Accommodation and Blur	131
6.4	Issues Specific to Computer Graphics	135
6.5	Suggestions for Further Reading	145
III	Surfaces and Movement	147
7	Perspective	149
7.1	The Nature of Perspective	150
7.2	Interposition	156
7.3	The Relationship between Size and Distance	157
7.4	Size and Shape Constancy	161
7.5	The Importance of the Ground Plane	164
7.6	Issues Specific to Computer Graphics	171
7.7	Suggestions for Further Reading	173

Contents

8	Texture	175
8.1	Characterizing Information About a Visual Texture . . .	176
8.2	Classification and Discrimination	178
8.3	Perception of Three-Dimensional Surface Structure from Visual Texture	181
8.4	Issues Specific to Computer Graphics	186
8.5	Suggestions for Further Reading	192
9	Illumination, Shading, and Shadows	193
9.1	Physical Properties of Illumination and Shading	194
9.2	Shape from Shading	205
9.3	Illumination and the Intrinsic Properties of Surfaces . .	215
9.4	Global Illumination and the Light Field	218
9.5	Experiments on Human Estimation of Illumination . . .	222
9.6	Cast Shadows	226
9.7	Issues Specific to Computer Graphics	231
9.8	Suggestions for Further Reading	231
10	Perception of Material Properties	233
10.1	What Makes Material Perception Difficult?	234
10.2	Estimating Material Properties: Two Approaches	237
10.3	Surface Reflectance and the BRDF	238
10.4	Matte Materials: Albedo and Lightness Constancy . . .	242
10.5	Specular Reflection and Glossiness	248
10.6	Transparency and Translucency	256
10.7	Texture and Surface Relief	264
10.8	3D Shape, Deformations, and the Perception of Material Properties	268
10.9	Issues Specific to Computer Graphics	274
10.10	Suggestions for Further Reading	274
11	Motion of Viewer and Objects	277
11.1	Relative Motion, Optic Flow, and Frames of Reference for Describing Movement	277
11.2	Viewer Motion	279
11.3	Object Motion	291
11.4	Issues Specific to Computer Graphics	299
11.5	Suggestions for Further Reading	300
12	Pictorial Space	303
12.1	Missing and Conflicting Spatial Cues	304
12.2	Incorrect Viewpoint	308
12.3	Is Picture Perception Learned?	319

12.4	Issues Specific to Computer Graphics	320
12.5	Suggestions for Further Reading	323
IV	Perception of Higher-Level Entities	325
13	Spatial Orientation and Spatial Cognition	327
13.1	Divisions and Information for Space Perception	328
13.2	Distance Perception and Ways to Measure It	329
13.3	Dynamic Spatial Orientation	332
13.4	Perceptual Adaptation	334
13.5	Imagery and Spatial Transformations	335
13.6	Spatial Knowledge and Memory	341
13.7	The Process of Wayfinding: A Summary	344
13.8	Individual Differences	345
13.9	Issues Specific to Computer Graphics	347
13.10	Suggestions for Further Reading	352
14	Perception and Action	353
14.1	Ecological Approach to Perception	354
14.2	Separate Systems for Perception and Action	357
14.3	Integrated Perception and Action Systems	359
14.4	Reaching and Grasping	361
14.5	Embodied Perception	363
14.6	Issues Specific to Computer Graphics	365
14.7	Suggestions for Further Reading	367
15	Object and Scene Recognition	369
15.1	The Problem of Object Recognition	369
15.2	Possible Approaches to Object Recognition	374
15.3	Scene Perception and the Role of Context in Object Recognition	386
15.4	Issues Specific to Computer Graphics	389
15.5	Suggestions for Further Reading	391
16	Visual Attention and Search	393
16.1	Bottom-Up and Top-Down Processing	394
16.2	Eye Movements	395
16.3	Selective Attention	399
16.4	Visual Search	405
16.5	Other Failures of Visual Awareness	408
16.6	Issues Specific to Computer Graphics	410
16.7	Suggestions for Further Reading	413

Contents

17 Event Recognition—Inanimate	415
17.1 Types of Events	416
17.2 Perceiving Natural Events	416
17.3 Event Recognition and Segmentation	421
17.4 Event Recognition: Interactions between Vision and Au- diation	424
17.5 Issues Specific to Computer Graphics	427
17.6 Suggestions for Further Reading	430
18 Event Recognition—Biological	431
18.1 Perception of Point-Light Displays	431
18.2 What Makes Biological Events Compelling?	434
18.3 Perception of Faces	439
18.4 Why Are Biological Events Special?	444
18.5 Issues Specific to Computer Graphics	445
18.6 Suggestions for Further Reading	450
References	451
Index	519
