Preface	xi
Preface to First Edition	xiii
1 Introduction	1
1.1 Therapeutic window	1
1.2 Consequences of drug concentration changes	3
1.3 Clearance	5
1.4 Hepatic extraction and intrinsic clearance	7
1.5 First pass and plasma drug levels	9
1.6 Drug and xenobiotic metabolism	11
2 Drug Biotransformational Systems – Origins and Aims	13
2.1 Biotransforming enzymes	13
2.2 Threat of lipophilic hydrocarbons	13
2.3 Cell communication	14
2.4 Potential food toxins	16
2.5 Sites of biotransforming enzymes	18
2.6 Biotransformation and xenobiotic cell entry	18
3 How Oxidative Systems Metabolize Substrates	23
3.1 Introduction	23
3.2 Capture of lipophilic molecules	23
3.3 Cytochrome P450s classification and basic structure	25
3.4 CYPs – main and associated structures	27
3.5 Human CYP families and their regulation	33
3.6 Main human CYP families	35
3.7 Cytochrome P450 catalytic cycle	43
3.8 Flavin monooxygenases (FMOs)	47
3.9 How CYP isoforms operate <i>in vivo</i>	50
3.10 Aromatic ring hydroxylation	53
3.11 Alkyl oxidations	54
3.12 ‘Rearrangement’ reactions	58
3.13 Other oxidation processes	63
3.14 Control of CYP metabolic function	64

CONTENTS

4	Induction of Cytochrome P450 Systems	65
4.1	Introduction	65
4.2	Causes of accelerated clearance	68
4.3	Enzyme induction	69
4.4	Mechanisms of enzyme induction	71
4.5	Induction – general clinical aspects	86
5	Cytochrome P450 Inhibition	93
5.1	Introduction	93
5.2	Inhibition of metabolism – general aspects	95
5.3	Mechanisms of inhibition	96
5.4	Cell transport systems and inhibition	111
5.5	Major clinical consequences of inhibition of drug clearance	114
5.6	Use of inhibitors for positive clinical intervention	119
5.7	Summary	123
6	Conjugation and Transport Processes	125
6.1	Introduction	125
6.2	Glucuronidation	126
6.3	Sulphonation	138
6.4	The GSH system	141
6.5	Glutathione S-transferases	144
6.6	Epoxide hydrolases	149
6.7	Acetylation	151
6.8	Methylation	152
6.9	Esterases/amidases	152
6.10	Amino acid conjugation (glycine or glutamate)	153
6.11	Phase III transport processes	153
6.12	Biotransformation-integration of processes	156
7	Factors Affecting Drug Metabolism	159
7.1	Introduction	159
7.2	Genetic polymorphisms	159
7.3	Effects of age on drug metabolism	192
7.4	Effects of diet on drug metabolism	196
7.5	Gender effects	200
7.6	Smoking	201
7.7	Effects of ethanol on drug metabolism	202
7.8	Artificial livers	210
7.9	Effects of disease on drug metabolism	210
7.10	Summary	212
8	Role of Metabolism in Drug Toxicity	213
8.1	Adverse drug reactions: definitions	213
8.2	Reversible drug adverse effects: Type A	213
8.3	Irreversible drug toxicity: Type B	220
8.4	Type B1 necrotic reactions	224
8.5	Type B2 reactions: immunotoxicity	236
8.6	Type B3 reactions: role of metabolism in cancer	251
8.7	Summary of biotransformational toxicity	266

CONTENTS

Appendix A	Methods in Drug Metabolism	269
A.1	Introduction	269
A.2	Analytical techniques	271
A.3	Human liver microsomes	272
A.4	Human hepatocytes	273
A.5	Human cell lines	275
A.6	Heterologous recombinant systems	276
A.7	Animal model developments in drug metabolism	276
A.8	Toxicological metabolism-based assays	278
A.9	<i>In silico</i> studies	281
A.10	Summary	282
Appendix B	Metabolism of Major Illicit Drugs	285
B.1	Introduction	285
B.2	Opiates	285
B.3	Cocaine	292
B.4	Hallucinogens	294
B.5	Amphetamines	298
B.6	Cannabis	304
B.7	Dissociative anaesthetics	307
Appendix C	Examination Techniques	311
C.1	Introduction	311
C.2	A first-class answer	311
C.3	Preparation	312
C.4	The day of reckoning	314
Appendix D	Summary of Major CYP Isoforms and their Substrates, Inhibitors and Inducers	317
Suggested Further Reading		319
Index		329
