Preface *XVII*

A Note to the Reader *XIX*

Introduction 7

- 1 Introduction 7
- 2 Immune Responses 1
- 3 Infection and Immunity 1
 - 3.1 Life in a Micro-Organism-Rich World 1
 - 3.2 Infectious Disease 2
- 4 Immunopathology and Immunotherapy 2
 - 4.1 Immune-Mediated Disease 2
 - 4.2 The Challenge of Transplants, the Problem of Cancer 2
 - 4.3 Immunological Interventions in Disease 3
 - 4.4 Using Immunological Tools for Diagnosis 3
- 5 Exploring Immunology 3

1 The Immune System 5

- 1.1 Introduction 5
- 1.2 Host Defence Against Infection 5
 - 1.2.1 Infectious Agents 6
 - 1.2.2 Host Defence 6
 - 1.2.3 Immune Recognition 6
 - 1.2.3.1 Recognition in Innate Immunity: Pattern Recognition Receptors 7
 - 1.2.3.2 Recognition in Adaptive Immunity: Antigen Receptors 8
 - 1.2.3.3 Types of Recognition in Innate and Adaptive Immunity 8
 - 1.2.4 Stages of Immunity 8
- 1.3 Anatomical Basis of Immunity 9
 - 1.3.1 Peripheral Tissues 10
 - 1.3.2 Lymphoid Tissues 11
 - 1.3.3 Inflammatory Sites 11
- 1.4 Cellular Basis of Immunity 12
 - 1.4.1 Origin of Immune Cells 12
 - 1.4.1.1 Haematopoiesis 12
 - 1.4.1.2 Lymphopoiesis 12
 - 1.4.1.3 Cell-Mediated Immunity 13
 - 1.4.1.4 Introduction to Cells of the Immune System 13
 - 1.4.1.5 Cells of Innate Immunity 13

1.4.1.6	Cells of Adaptive Immunity	14
1.4.1.7	Cells that Directly Link Innate and Adaptive Immune Responses	14
1.4.2	Phagocytes	14
1.4.2.1	Macrophages	15
1.4.2.2	Neutrophils	16
1.4.3	Mast Cells, Eosinophils and Basophils	17
1.4.3.1	Mast Cells	17
1.4.3.2	Eosinophils	17
1.4.3.3	Basophils	18
1.4.4	Natural Killer Cells	18
1.4.5	Lymphocytes	19
1.4.5.1	CD4 Helper and Regulatory T Cells	19
1.4.5.2	CD8 T cells	21
1.4.5.3	B Lymphocytes	21
1.4.5.4	Memory Lymphocytes	21
1.4.6	Dendritic Cells (DCs)	22
1.4.7	Coordination of Immune Responses	23
1.5	Molecular Basis of Immunity	24
1.5.1	Cell-Associated and Soluble Molecules of Immunity	24
1.5.2	Adhesion Molecules	24
1.5.2.1	Selectins	25
1.5.2.2	Chemokines and Chemokine Receptors	25
1.5.2.3	Integrins	26
1.5.3	PRRs and Antigen Receptors	26
1.5.3.1	Pattern Recognition Receptors (PRRs)	27
1.5.3.2	B Cell Receptors (BCRs)	27
1.5.3.3	T Cell Receptors (TCRs)	29
1.5.3.4	Major Histocompatibility Complex (MHC) Molecules	31
1.5.4	Cytokines and Cytokine Receptors	33
1.5.4.1	Cytokines in Innate Immunity	34
1.5.4.2	Cytokines in Adaptive Immunity	34
1.5.4.3	Chemokines and Chemokine Receptors	35
1.5.5	Effector Molecules of Immunity	35
1.5.5.1	Shared Functions of Complement and Antibodies	35
1.5.5.2	Complement and Complement Receptors	35
1.5.5.3	Antibodies and Fc Receptors	35
1.5.6	Cell Signalling Components	36
1.6	Immune Responses and Disease	37
1.6.1	The Adaptive Immune System Needs to be Educated	37
1.6.1.1	The Problem of Self-Non-Self Discrimination	37
1.6.1.2	Immunological Tolerance	37
1.6.2	Immune Responses Against Infection Can Cause Damage	39
1.6.2.1	Immunity is Generally Beneficial	39
1.6.2.2	Normal Immunity Can Cause Problems	39
1.6.3	Defects in Immunity Can Cause Serious Infections	40
1.6.3.1	Primary Immunodeficiency Diseases	41
1.6.3.2	Secondary (Acquired) Immunodeficiency Diseases	41
1.6.4	Immune Responses Can Sometimes be Made Against the Wrong Antigens	41
1.6.4.1	Autoimmune Diseases	41
1.6.4.2	Immune-Related Sensitivities (Hypersensitivity Diseases)	42
1.6.5	Transplantation Reactions	43

1.6.5.1	Acute Rejection	43
1.6.5.2	Other Types of Rejection	43
1.6.5.3	Graft Versus Host Disease	43
1.6.6	Tumours Can Evade the Immune System	44
1.6.7	Immune-Based Therapies	44
1.6.7.1	Vaccines	44
1.6.7.2	Monoclonal and Therapeutic Antibodies	45
2	Infection and Immunity	49
2.1	Introduction	49
2.2	Pathogens and Infectious Disease	49
2.2.1	What is a Pathogen?	49
2.2.2	What Types of Pathogen Can Cause Disease?	50
2.2.2.1	Viruses	50
2.2.2.2	Bacteria	52
2.2.2.3	Fungi	53
2.2.2.4	Parasites	53
2.2.3	Infection and Disease	54
2.2.4	Immunodeficiency Diseases	55
2.2.5	Exploring Immunity to Infection	56
2.3	Host Defence Against Infection	57
2.3.1	Mechanisms of Innate Immunity	58
2.3.1.1	Phagocytes and Phagocytosis	58
2.3.1.2	Opsonization, Complement and Natural Antibodies	60
2.3.1.3	Neutrophils, Extracellular Bacteria and Fungi	61
2.3.1.4	Macrophages, Intracellular Bacteria and Viruses	62
2.3.1.5	Natural Killer (NK) Cells and Viruses	62
2.3.1.6	Mast Cells and Basophils, Extracellular Bacteria and Parasites	63
2.3.1.7	Eosinophils, Parasites and Tissue Repair	64
2.3.2	Mechanisms of Adaptive Immunity	65
2.3.2.1	CD4 T Cells	65
2.3.2.2	CD8 T Cells	68
2.3.2.3	Antibodies	69
2.4	Infection and Immunity in Action	69
2.4.1	How Do Pathogens Cause Disease?	69
2.4.1.1	Mechanisms of Pathogenicity	70
2.4.1.2	How Do We Know a Particular Pathogen Causes a Particular Disease?	70
2.4.2	Pathogenesis of Bacterial Infections	72
2.4.2.1	Bacteria that Secrete Toxins	72
2.4.2.2	Bacteria that Cause Acute Inflammation	75
2.4.2.3	Bacteria that Cause Chronic Inflammation	76
2.4.2.4	Bacteria that Cause Intestinal Inflammation	79
2.4.2.5	Bacteria that Cause Septic Shock	80
2.4.2.6	Bacteria that May Cause Malignant Tumours	80
2.4.3	Pathogenesis of Viral Infections	81
2.4.3.1	Viruses that Cause Direct Cell Death	81
2.4.3.2	Viruses that Cause Acute Inflammation	84
2.4.3.3	Viruses that Cause Chronic Inflammation	86
2.4.3.4	Viruses that Cause Tumours	88
2.4.3.5	Viruses that Cause Immunosuppression	90
2.4.4	Pathogenesis of Yeast and Fungal Infections	92
2.4.5	Pathogenesis of Parasitic Infections	92
2.5	Immunity and Vaccines	94
2.5.1	Passive Forms of Immunity	95

2.5.2	Active Forms of Immunity	95
2.5.2.1	What Makes a Good Vaccine?	95
2.5.2.2	How Best to Vaccinate?	95
2.5.2.3	Future Prospects	96
3	Functional Anatomy of the Immune System	99
3.1	Introduction	99
3.2	Natural Barriers	99
3.2.1	Skin	100
3.2.2	Mucosal Surfaces	100
3.2.2.1	Respiratory Tract	101
3.2.2.2	Gastro-Intestinal Tract	101
3.2.2.3	Urogenital Tract	101
3.2.2.4	Commensal Flora	102
3.3	Functional Anatomy of Innate Immunity	103
3.3.1	Features of Inflammation	103
3.3.2	Initiation of Local Inflammation	104
3.3.2.1	Responses to Trauma	104
3.3.2.2	Responses to Infection	104
3.3.3	Local Inflammatory Responses	105
3.3.3.1	Recruitment of Soluble Effector Molecules	106
3.3.3.2	Recruitment of Cellular Effectors	106
3.3.4	Effects of Inflammatory Mediators on Distant Tissues: The Acute-Phase Response and Systemic Inflammatory Responses	107
3.3.5	Initiation of Adaptive Immunity	109
3.3.6	Regulation of Inflammation, Healing and Repair	109
3.3.6.1	Regulation of Inflammation	109
3.3.6.2	Healing and Repair in Acute Inflammation	109
3.3.6.3	Repair in Chronic Inflammation	110
3.4	Functional Anatomy of Adaptive Immunity	111
3.4.1	Why Do We Need Secondary Lymphoid Tissues?	111
3.4.2	Structure and Function of Secondary Lymphoid Organs	113
3.4.2.1	Lymph Node Structure and Function in the Steady State	114
3.4.2.2	Lymphocyte Recirculation	116
3.4.2.3	T Cell Responses in Lymph Nodes	116
3.4.2.4	Fates of Activated T Cells	119
3.4.2.5	B Cell Responses in Lymph Nodes	121
3.4.2.6	Development of Memory Responses	124
3.4.2.7	Peyer's Patches	124
3.4.2.8	Spleen Structure and Function	125
3.5	Development of Blood Cells and Organs of Immunity	126
3.5.1	Primary Lymphoid Tissues and Haematopoiesis	126
3.5.1.1	Haematopoietic and Primary Lymphoid Organs	126
3.5.1.2	Stem Cells and Haematopoiesis	127
3.5.1.3	Thymus	128
3.5.2	Development of Secondary Lymphoid Organs	129
3.5.3	Tertiary Lymphoid Organs	130
3.6	Stem Cell and Gene Therapy	130
4	Innate Immunity	133
4.1	Introduction	133
4.2	Induction of Innate Immunity	133
4.2.1	The Concepts: Pattern Recognition and Danger	133
4.2.2	Pattern Recognition Receptors (PRRs)	134
4.2.2.1	Cell-Associated PRRs that Promote Uptake	134

4.2.2.2	Cell-Associated PRRs that Signal to the Nucleus	136
4.2.2.3	Structure and Function of TLRs	137
4.2.2.4	Inflammasomes and Autoinflammatory Diseases	141
4.2.2.5	Cellular Distribution of PRRs	142
4.2.3	Cytokines in Innate Immunity	143
4.2.3.1	Interferons (IFNs) and Anti-Viral Resistance	143
4.2.3.2	Pro-Inflammatory Cytokines	144
4.2.3.3	Anti-Inflammatory Cytokines	145
4.3	Tissue-Resident Cells of Innate Immunity	145
4.3.1	Epithelial Cells	145
4.3.2	Mast Cells	147
4.3.3	Macrophages	149
4.3.3.1	Resident Macrophages	149
4.3.3.2	Phagocytosis	149
4.3.3.3	Phagocytic Receptors on Macrophages	149
4.3.4	Endothelial Cells and Inflammation	150
4.3.4.1	Leukocyte Transendothelial Migration See Figure 4.18	151
4.3.4.2	Regulation of Leukocyte Recruitment by Endothelial Cells	152
4.4	Recruited Effectors of Innate Immunity	153
4.4.1	Recruited Molecules	153
4.4.2	Complement System	154
4.4.2.1	Complement Activation and Functions	155
4.4.2.2	Regulation of Complement Activation	157
4.4.2.3	Complement Deficiencies	157
4.4.2.4	Subversion of Complement Activation by Pathogens	157
4.4.3	Neutrophils	157
4.4.3.1	Bacterial Killing by Neutrophils	159
4.4.3.2	Neutrophil Defects	161
4.4.4	Recruited Macrophages and Inflammatory Homeostasis	162
4.4.5	Natural Killer (NK) Cells	163
4.4.5.1	NK Cell Subsets	163
4.4.5.2	NK Cell Activating and Inhibitory Receptors	166
4.4.6	Systemic Effects of Innate Immune Activation	166
4.4.7	Innate immunity and the Induction of Adaptive Responses	168
4.5	Haematopoiesis and Myeloid Cells	169
4.5.1	Regulation of Haematopoiesis	170
4.5.2	Stem Cells and Cytokines	170
4.5.3	Cytokines and Leukocytes	170
4.6	Vaccines and Adjuvants	171
4.6.1	Current Adjuvants	171
4.6.2	New Adjuvants	173
5	T Cell-Mediated Immunity	175
5.1	Introduction	175
5.1.1	T Cell Populations	175
5.1.2	How Do Conventional T Cells Recognize Antigens?	175
5.1.3	Subpopulations of Conventional T Cells	176
5.1.4	Effector Functions of T Cell Populations	178
5.1.5	T Cell-Mediated Immunity Against Infection	178
5.2	Major Histocompatibility Complex (MHC) and Antigen Presentation	179
5.2.1	Classical MHC Molecules	179

5.2.1.1	How Do Peptides Bind to Classical MHC Molecules?	180
5.2.1.2	Cellular Distribution of Classical MHC Molecules	182
5.2.2	Non-Classical MHC Molecules	182
5.2.3	The Cellular Basis of Antigen Processing and Presentation	182
5.2.4	Antigen Processing and MHC Class I Presentation	182
5.2.4.1	The Proteasome	183
5.2.4.2	The TAP Transporter	184
5.2.4.3	The Peptide-Loading Complex and Peptide Editing	184
5.2.5	Antigen Processing and MHC Class II Presentation	185
5.2.5.1	Endosomal Degradation of Foreign Antigens	185
5.2.5.2	Peptide Loading in the MHC Class II Pathway	186
5.2.6	Cross-Presentation	187
5.2.7	Subversion of Antigen Processing by Pathogens	188
5.2.8	Presentation of Lipid Antigens by CD1 Molecules	188
5.2.8.1	CD1 molecules	189
5.2.8.2	Invariant NKT (iNKT) Cells	189
5.3	T Lymphocyte Activation	191
5.3.1	Anatomical Basis of T Cell Responses	191
5.3.2	Molecular Requirements for T Cell Activation	191
5.3.3	Molecular Anatomy of T Cell Activation	192
5.3.3.1	Role of the TCR and Other Molecules in T Cell Activation	193
5.3.3.2	Intracellular Signalling in T Cell Activation	194
5.3.3.3	Defects, Evasion and Manipulation of T Cell Signalling	195
5.4	Effector and Memory Functions of T Cells in Infection	196
5.4.1	DCs and T Cell Activation and Polarization	196
5.4.1.1	Classical DCs	196
5.4.1.2	Langerhans Cells	197
5.4.1.3	Monocyte-Derived DCs	197
5.4.1.4	Plasmacytoid DCs	198
5.4.2	Effector Functions of CD4 T Cells	198
5.4.2.1	CD4 T Cells in the Steady State	198
5.4.2.2	CD4 T Cells in the Non-Steady State	198
5.4.2.3	T _h 0 Cells	198
5.4.2.4	T _h 1 and T _h 2 cells	199
5.4.2.5	T _h 17 cells	201
5.4.3	Effector Functions of CD8 T Cells	202
5.4.3.1	Activation of CD8 T Cells	202
5.4.3.2	CD8 T Cell Cytotoxicity	203
5.4.3.3	Cytokine Secretion by CD8 T Cells	205
5.4.4	T Cell Memory	205
5.4.5	Gamma-delta ($\gamma\delta$) T cells	208
5.5	T Cell Development and Selection	209
5.5.1	Generation of Diversity of Alpha-beta ($\alpha\beta$) TCRs	209
5.5.1.1	TCR Generation	209
5.5.1.2	Generation of the $\alpha\beta$ TCR	210
5.5.1.3	Mechanisms of Somatic Gene Rearrangement and Further Generation of Diversity of TCRs	210
5.5.2	Positive Selection and MHC Restriction of $\alpha\beta$ T Cells	210
5.5.3	Negative Selection and Central Tolerance	211
5.5.4	Generation of $\gamma\delta$ TCRs	212
5.5.5	Peripheral Tolerance	213

5.5.5.1	Regulatory T Cells	213
5.5.5.2	DCs and Peripheral Self-Tolerance	214
5.5.5.3	Oral and Nasal Tolerance	214
5.5.5.4	Secondary Lymphoid Tissues and AIRE	215
5.6	Adoptive Cell Therapy	215
5.6.1	T Cell Vaccines	215
5.6.2	Immunotherapy	215
5.6.2.1	Therapy of Infections and Immunopathological Diseases	216
6	Antibody-Mediated Immunity	217
6.1	Introduction	217
6.1.1	B Cell Populations	217
6.1.2	How Do Antibodies Recognize Antigens?	218
6.2	Antibody Structure and Function	218
6.2.1	Immunoglobulins and Antibodies	218
6.2.2	Antibody Structures	218
6.2.3	Generation of Antibody Diversity	220
6.2.3.1	Rearrangement of Immunoglobulin Genes	DNA 220
6.2.3.2	Allelic and Isotype Exclusion	224
6.2.4	Antibody Classes (Isotypes) and Their Properties	224
6.2.4.1	IgM	224
6.2.4.2	IgD	226
6.2.4.3	IgG	227
6.2.4.4	IgA	227
6.2.4.5	IgE	229
6.2.5	Monoclonal Antibodies	229
6.2.6	Antibody Functions in Defence Against Infection	231
6.2.6.1	Neutralization	231
6.2.6.2	Pathogen Opsonization	232
6.2.6.3	Induction of Acute Inflammation	232
6.2.6.4	Antibody-Dependent Cellular Cytotoxicity (ADCC)	234
6.2.6.5	Modulation of Adaptive Immunity	235
6.3	B Cell Responses	236
6.3.1	Anatomical Basis of B Cell Responses	237
6.3.1.1	Functional Anatomy of TI-2 Antibody Responses	237
6.3.1.2	Functional Anatomy of TD Antibody Responses	237
6.3.2	T-Independent (TI) Antibody Responses	239
6.3.2.1	B Cell Activation	241
6.3.2.2	BCR Signalling	241
6.3.2.3	Positive and Negative Regulation of B Cell Activation	242
6.3.3	T-Dependent (TD) Antibody Responses	243
6.3.3.1	Primary and Secondary Antibody Responses	243
6.3.3.2	Molecular Events in TD Responses	243
6.3.3.3	B Cell Activation	243
6.3.3.4	Cytokine Synthesis and TLR Expression by B Cells	244
6.3.3.5	Differentiation of Activated B Cells	245
6.3.3.6	Isotype Switching	245
6.3.3.7	Regulation of immune Responses by Fc Receptors	248
6.3.3.8	Affinity Maturation	248

6.4	B Cell Memory, Antibodies and Long-Term Resistance to Re-Infection	250
6.4.1	Memory B Cells	250
6.4.2	Long-Lived Plasma Cells	252
6.4.3	Subclinical Infections	252
6.5	B Cell Differentiation and Selection	252
6.5.1	Development of B Cell Populations	252
6.5.2	Differentiation of B-2 Cells	252
6.5.3	B Cell Tolerance	253
6.6	Therapeutic Antibodies	254
6.6.1	Antibodies for Immunotherapy	254
6.6.2	Antibody Engineering	254
7	Immunity, Disease and Therapy	259
7.1	Introduction	259
7.1.1	Immunity, Disease and Therapy	259
7.1.1.1	Immunity and Disease: Immunopathology	259
7.1.1.2	Disease and Therapy: Immunotherapy	261
7.2	What are the Mechanisms of Tissue Damage Caused by the Immune System?	262
7.2.1	Initiation and Effector Phases of Disease	262
7.2.2	Classification of Immunopathological Mechanisms	263
7.2.3	Diseases Caused by IgE Antibodies (Type I: Allergic Hypersensitivity)	263
7.2.4	Diseases Caused by Antibody-Dependent Modulation of Function (Type II: Cytotoxic Hypersensitivity)	265
7.2.5	Diseases Mediated by Immune Complexes (Type III Hypersensitivity)	266
7.2.5.1	Diseases Caused by Blood-Borne Immune Complexes	266
7.2.5.2	Disease Caused by Local Deposition of Immune Complexes	267
7.2.6	Diseases Caused by Cell-Mediated Immune Responses (Type IV: Delayed-Type Hypersensitivity (DTH))	267
7.3	Why Do We Make Harmful Immune Responses to Harmless Antigens?	268
7.3.1	Antigen Recognition by Lymphocytes in Normal and Pathogenic States	270
7.3.1.1	Generation of the Antigenic Repertoire of Lymphocytes	270
7.3.1.2	Promiscuity of Antigen Recognition by Lymphocytes	271
7.3.2	Lymphocyte Activation in Immunological Diseases	272
7.3.2.1	Signals for Lymphocyte Activation	272
7.3.2.2	Lymphocyte Activation in Disease	272
7.3.2.3	Polarization of CD4 T Cells in Immunopathology	276
7.3.3	Genetic Basis of Immunopathology	276
7.3.3.1	Concordance in Twin Studies	277
7.3.3.2	Which Genes Confer Susceptibility or Resistance to Immunopathology?	277
7.3.3.3	Animal Studies and Genetic Susceptibility	278
7.3.3.4	The Increasing Incidence of Immunological Diseases	278
7.4	Immunopathology and Therapy in Action	278
7.4.1	Allergic Diseases (Type I Hypersensitivity Reactions)	279

7.4.1.1	Anaphylaxis	279
7.4.1.2	Asthma	280
7.4.2	Diseases Caused by the Actions of Antibodies on Cells (Type II Hypersensitivity Reactions)	283
7.4.2.1	Molecular Mimicry	283
7.4.2.2	Anti-Receptor Antibodies	285
7.4.2.3	Drug Sensitivities	285
7.4.2.4	Blood Group Antibodies and Disease	286
7.4.2.5	Haemolytic Disease of the New-Born	286
7.4.2.6	Treatment of Type II Sensitivities	287
7.4.3	Diseases Caused by Immune Complexes (Type III Hypersensitivity Reactions)	288
7.4.3.1	Diseases Caused by Systemic Immune Complexes	289
7.4.3.2	Diseases Caused by Local Deposition of Immune Complexes. See Case Study 7.6.	289
7.4.3.3	Pathogenesis of Occupational Hypersensitivities	289
7.4.3.4	Treatment of Immune Complex-Related Diseases	290
7.4.4	Cell-Mediated (Type IV) Hypersensitivity Reactions	291
7.4.4.1	Type I Insulin-Dependent Diabetes	292
7.4.4.2	Multiple Sclerosis	294
7.4.4.3	Inflammatory Bowel Disease	296
7.4.4.4	Rheumatoid Arthritis	297
7.4.5	Conclusions	298
7.5	Transplantation Immunology	300
7.5.1	Immune Responses to Transplants	300
7.5.1.1	The Language of Transplantation	300
7.5.1.2	Major Histocompatibility Antigens	300
7.5.1.3	Minor Histocompatibility Antigens	300
7.5.2	Transplant Rejection	300
7.5.2.1	Hyperacute Rejection	301
7.5.2.2	Acute Allograft Rejection	302
7.5.2.3	Chronic Rejection	305
7.5.3	Bone Marrow and Stem Cell Transplantation	306
7.5.3.1	Graft-Versus-Host Disease (GVHD)	306
7.5.3.2	Graft Versus Leukaemia Effect	306
7.5.4	The Foetus as an Allograft	306
7.6	Tumour Immunity	306
7.6.1	Tumour Antigenicity	307
7.6.2	Tumour Immunosurveillance	308
7.6.3	Tumour Immunity and Darwin	308
7.6.4	Evasion of the Immune Response by Tumours	309
7.6.5	Immunotherapy for Cancer	309
7.7	Conclusions	310
