Preface.....	xi
Authors	xiii

1. Electric and Magnetic Fields: Basic Concepts.....	1
1.1 Introduction.....	1
1.2 Electric Field Concepts.....	1
1.3 Magnetic Field Concepts.....	5
1.4 Sources of Electric Fields (Maxwell's Equations)	8
1.5 Sources of Magnetic Fields (Maxwell's Equations)	12
1.6 Electric and Magnetic Field Interactions with Materials	14
1.7 Other Electromagnetic Field Definitions.....	17
1.8 Waveforms Used in Electromagnetics	17
1.9 Sinusoidal EM Functions	19
1.10 Root Mean Square or Effective Values.....	21
1.11 Wave Properties in Lossless Materials.....	22
1.12 Boundary Conditions for Lossless Materials.....	25
1.13 Complex Numbers in Electromagnetics (the Phasor Transform)	28
1.14 Wave Properties in Lossy Materials.....	30
1.15 Boundary Conditions for Lossy Materials	34
1.16 Energy Absorption.....	35
1.17 Electromagnetic Behavior as a Function of Size and Wavelength.....	36
1.18 Electromagnetic Dosimetry.....	40
2. EM Behavior When the Wavelength Is Large Compared to the Object Size	45
2.1 Introduction	45
2.2 Low-Frequency Approximations.....	46
2.3 Fields Induced in Objects by Incident E Fields in Free Space.....	47
2.4 E Field Patterns for Electrode Configurations	52
2.4.1 Capacitor-Plate Electrodes.....	52
2.4.2 Displacement Current	55
2.4.3 <i>In Vitro</i> Electrode Configurations.....	57
2.5 Electrodes for Reception and Stimulation in the Body	61
2.5.1 Electrodes for Reception	64
2.5.1.1 Electrophysiological Assessment.....	64
2.5.1.2 Intracellular Recording: Receiving Signals from Brain and Nerves	65
2.5.1.3 Impedance Imaging	65
2.5.1.4 Impedance Monitoring for Lung Water Content and Percent Body Fat	66
2.5.2 Electrodes for Stimulation	68
2.5.2.1 Cardiac Pacemakers and Defibrillators.....	68
2.5.2.2 Pulsed Electromagnetic Fields	69
2.5.2.3 Direct Nerve Stimulation	70
2.5.2.4 Ablation	70

2.6	Fields Induced in Objects by Incident B Fields in Free Space.....	71
2.7	E Field Patterns for <i>In Vitro</i> Applied B Fields	75
2.8	Measurement of Low-Frequency Electric and Magnetic Fields.....	83
2.9	Summary	90
3.	EM Behavior When the Wavelength Is About the Same Size as the Object	95
3.1	Introduction	95
3.2	Waves in Lossless Media.....	96
3.2.1	Spherical Waves	96
3.2.2	Planewaves.....	99
3.3	Wave Reflection and Refraction	101
3.3.1	Planewave Reflection at Metallic Interfaces.....	101
3.3.2	Planewave Reflection and Refraction at Dielectric Interfaces	109
3.4	Waves in Lossy Media.....	116
3.4.1	Waves in Metals	116
3.4.2	Waves in Lossy Dielectrics	117
3.4.3	Energy Absorption in Lossy Media	117
3.5	Transmission Lines and Waveguides.....	120
3.5.1	TEM Systems	120
3.5.2	TEM Systems for Exposing Biological Samples	125
3.5.3	Waveguides.....	128
3.5.3.1	TE and TM Mode Patterns in Rectangular Waveguides	128
3.5.3.2	Mode Excitation and Cutoff Frequencies.....	131
3.5.3.3	Waveguide Systems for Exposing Biological Samples.....	134
3.6	Resonant Systems.....	135
3.7	Antennas	138
3.8	Diffraction	150
3.8.1	Diffraction from Apertures.....	150
3.8.2	Diffraction from Periodic Structures	152
3.9	Measurement of Mid-Frequency Electric and Magnetic Fields	154
3.10	Summary	160
4.	EM Behavior When the Wavelength Is Much Smaller Than the Object	161
4.1	Introduction	161
4.2	Ray Propagation Effects	163
4.2.1	Refraction at Dielectric Interfaces.....	163
4.2.2	Optical Polarization and Reflection from Dielectric Interfaces	165
4.2.3	Ray Tracing with Mirrors and Lenses	168
4.2.4	Imaging with Lenses.....	170
4.2.5	Graded-Index Lenses.....	173
4.3	Total Internal Reflection and Fiber Optic Waveguides	173
4.3.1	Multimode Optical Fibers.....	175
4.3.2	Single-Mode Optical Fibers.....	176
4.4	Propagation of Laser Beams.....	177
4.4.1	Linewidths of Laser Beams	177
4.4.2	The Gaussian Spherical Profile	178
4.4.3	Propagation Characteristics of a Gaussian Beam.....	179
4.4.4	Focusing a Gaussian Beam with a Lens	181
4.4.5	Applying the Gaussian Beam Equations.....	182

4.5	Scattering from Particles.....	183
4.5.1	Rayleigh Scattering.....	184
4.5.2	Mie Scattering.....	185
4.6	Photon Interactions with Tissues.....	187
4.6.1	Light Scattering in Tissues and Photon Migration	188
4.6.2	Tissue Absorption and Spectroscopy	189
4.7	X-Rays	191
4.8	Measurement of High-Frequency Electric and Magnetic Fields (Light).....	191
4.9	Summary	193
5.	Bioelectromagnetic Dosimetry	195
5.1	Introduction	195
5.2	Polarization	197
5.3	Electrical Properties of the Human Body.....	200
5.4	Human Models.....	200
5.5	Energy Absorption (SAR)	202
5.5.1	SARs at Low Frequencies.....	203
5.5.2	SAR as a Function of Frequency	204
5.5.3	Effects of Polarization on SAR	205
5.5.4	Effects of Object Size on SAR.....	207
5.6	Extrapolating from Experimental Animal Results to Those Expected in Humans	208
5.7	Numerical Methods for Bioelectromagnetic Stimulation	210
5.7.1	The Finite-Difference Time-Domain (FDTD) Method	211
5.7.1.1	Computation of Fields in a Human under a 60-Hz Power Line.....	213
5.7.1.2	Computation of SAR from Cellular Telephones	213
5.7.2	The Impedance Method.....	215
5.7.2.1	Calculation of the E Fields Induced Near Implants During MRI.....	216
5.7.2.2	Modeling an Implant in the Human Body	217
5.7.2.3	Results of the Numerical Calculations.....	218
5.8	Electromagnetic Regulations	222
5.8.1	Allowable Frequencies	222
5.8.2	Limits on Absorbed Power.....	222
5.8.3	Localized Exposure Limits.....	224
5.8.4	Induced Current and Shock Guidelines	224
5.8.5	Power-Line and Static Field Limits	225
5.9	Conclusion and Summary	226
	References	227
6.	Electromagnetics in Medicine: Today and Tomorrow	229
6.1	Introduction	229
6.2	Fundamental Potential and Challenges.....	229
6.3	Hyperthermia for Cancer Therapy.....	232
6.3.1	Types of Hyperthermia Applicators	233
6.3.1.1	Capacitive Applicators.....	234
6.3.1.2	Inductive Applicators	235

6.3.1.3	Radiative Applicators	237
6.3.1.4	Invasive Applicators.....	240
6.3.2	Engineering Problems Remaining in Hyperthermia	241
6.4	Magnetic Effects.....	242
6.4.1	Magnetic Resonance Imaging (MRI)	242
6.4.2	Nuclear Magnetic Resonance (NMR) Spectroscopy.....	245
6.5	Proposed Bioelectromagnetic Effects.....	246
6.5.1	Soliton Mechanisms	247
6.5.2	Spatial/Temporal Cellular Integration	247
6.5.3	Stochastic Resonance.....	247
6.5.4	Temperature-Mediated Alteration of Membrane Ionic Transport	247
6.5.5	Plasmon Resonance Mechanisms.....	247
6.5.6	Radon Decay Product Attractors.....	247
6.5.7	Rectification by Cellular Membranes.....	248
6.5.8	Ion Resonance.....	248
6.5.9	Ca ⁺⁺ Oscillations.....	248
6.5.10	Magnetite Interactions	248
6.6	Emerging Bioelectromagnetic Applications	248
6.6.1	Low-Frequency Applications	249
6.6.2	Medium-Frequency Applications.....	249
6.6.3	High-Frequency Applications.....	250
6.7	Conclusion.....	251
Appendix A: Electrical Properties of the Human Body.....		253
Appendix B: Definition of Variables		257
Appendix C: Decibels		263
Index		265
