

Computational Methods for Electromagnetic and Optical Systems

SECOND EDITION

John M. Jarem
Partha P. Banerjee

CRC Press
Taylor & Francis Group

Contents

| | |
|---|------|
| Preface..... | xiii |
| Authors..... | xv |
| Chapter 1 Mathematical Preliminaries | 1 |
| 1.1 Introduction | 1 |
| 1.2 Fourier Series and Its Properties | 1 |
| 1.3 Fourier Transform..... | 3 |
| 1.4 Hankel Transform..... | 4 |
| 1.5 Discrete Fourier Transform | 4 |
| 1.6 Review of Eigenanalysis..... | 5 |
| Problems..... | 10 |
| References | 10 |
| Chapter 2 Scalar EM Beam Propagation in Inhomogeneous Media | 11 |
| 2.1 Introduction | 11 |
| 2.2 Transfer Function for Propagation..... | 11 |
| 2.3 Split-Step Beam Propagation Method | 12 |
| 2.4 Beam Propagation in Linear Media | 14 |
| 2.4.1 Linear Free-Space Beam Propagation | 14 |
| 2.4.2 Propagation of Gaussian Beam through Graded Index Medium..... | 16 |
| 2.5 Beam Propagation through Diffraction Gratings: Acoustooptic Diffraction..... | 18 |
| 2.6 Beam Propagation in Kerr-Type Nonlinear Media | 19 |
| 2.6.1 Nonlinear Schrodinger Equation..... | 19 |
| 2.6.2 Simulation of Self-Focusing Using Adaptive Fourier and Fourier–Hankel Transform Methods..... | 22 |
| 2.7 Beam Propagation and Coupling in Photorefractive Media..... | 28 |
| 2.7.1 Basic Photorefractive Physics..... | 28 |
| 2.7.2 Induced Transmission Gratings..... | 29 |
| 2.7.3 Induced Reflection Gratings and Bidirectional Beam Propagation Method | 35 |
| 2.8 z-Scan Method..... | 39 |
| 2.8.1 Model for Beam Propagation through PR Lithium Niobate | 41 |
| 2.8.2 z-Scan: Analytical Results, Simulations, and Sample Experiments ... | 43 |
| Problems..... | 46 |
| References | 47 |
| Chapter 3 EM Wave Propagation in Linear Media..... | 51 |
| 3.1 Introduction | 51 |
| 3.2 Maxwell’s Equations..... | 51 |
| 3.3 Constitutive Relations: Frequency Dependence and Chirality..... | 53 |
| 3.3.1 Constitutive Relations and Frequency Dependence | 53 |
| 3.3.2 Constitutive Relations for Chiral Media | 55 |

| | | |
|------------------|---|------------|
| 3.4 | Plane Wave Propagation through Linear Homogeneous Isotropic Media | 56 |
| 3.4.1 | Dispersive Media | 57 |
| 3.4.2 | Chiral Media | 61 |
| 3.5 | Power Flow, Stored Energy, Energy Velocity, Group Velocity, and Phase Velocity | 62 |
| 3.6 | Metamaterials and Negative Index Media | 65 |
| 3.6.1 | Beam Propagation in NIMs | 68 |
| 3.7 | Propagation through Photonic Band Gap Structures: The Transfer Matrix Method | 71 |
| 3.7.1 | Periodic PIM–NIM Structures | 75 |
| 3.7.2 | EM Propagation in Complex Structures | 75 |
| | Problems | 78 |
| | References | 80 |
| Chapter 4 | Spectral State Variable Formulation for Planar Systems | 83 |
| 4.1 | Introduction | 83 |
| 4.2 | State Variable Analysis of an Isotropic Layer | 86 |
| 4.2.1 | Introduction | 86 |
| 4.2.2 | Analysis | 87 |
| 4.2.3 | Complex Poynting Theorem | 90 |
| 4.2.4 | State Variable Analysis of an Isotropic Layer in Free Space | 93 |
| 4.2.5 | State Variable Analysis of a Radar Absorbing Layer | 98 |
| 4.2.6 | State Variable Analysis of a Source in Isotropic Layered Media | 100 |
| 4.3 | State Variable Analysis of an Anisotropic Layer | 104 |
| 4.3.1 | Introduction | 104 |
| 4.3.2 | Basic Equations | 104 |
| 4.3.3 | Numerical Results | 108 |
| 4.4 | One-Dimensional k -Space State Variable Solution | 112 |
| 4.4.1 | Introduction | 112 |
| 4.4.2 | k -Space Formulation | 112 |
| 4.4.3 | Ground Plane Slot Waveguide System | 113 |
| 4.4.4 | Ground Plane Slot Waveguide System, Numerical Results | 120 |
| | Problems | 122 |
| | References | 126 |
| Chapter 5 | Planar Diffraction Gratings | 129 |
| 5.1 | Introduction | 129 |
| 5.2 | H-Mode Planar Diffraction Grating Analysis | 132 |
| 5.2.1 | Full-Field Formulation | 133 |
| 5.2.2 | Differential Equation Method | 139 |
| 5.2.3 | Numerical Results | 145 |
| 5.2.4 | Diffraction Grating Mirror | 150 |
| 5.3 | Application of RCWA and the Complex Poynting Theorem to E-Mode Planar Diffraction Grating Analysis | 153 |
| 5.3.1 | E-Mode RCWA Formulation | 155 |
| 5.3.2 | Complex Poynting Theorem | 158 |
| 5.3.2.1 | Sample Calculation of P_{WE}^u | 159 |

| | | | |
|------------------|---------|---|-----|
| | 5.3.2.2 | Other Poynting Theorem Integrals | 160 |
| | 5.3.2.3 | Simplification of Results and Normalization..... | 160 |
| | 5.3.3 | Numerical Results | 165 |
| 5.4 | | Multilayer Analysis of E-Mode Diffraction Gratings | 172 |
| | 5.4.1 | E-Mode Formulation | 173 |
| | 5.4.2 | Numerical Results | 178 |
| 5.5 | | Crossed Diffraction Grating..... | 180 |
| | 5.5.1 | Crossed Diffraction Grating Formulation | 180 |
| | 5.5.2 | Numerical Results | 194 |
| | | Problems..... | 202 |
| | | References | 205 |
| Chapter 6 | | Application of RCWA to Analysis of Induced Photorefractive Gratings..... | 209 |
| 6.1 | | Introduction to Photorefractive Materials | 209 |
| 6.2 | | Dynamic Nonlinear Model for Diffusion-Controlled PR Materials..... | 211 |
| 6.3 | | Approximate Analysis | 212 |
| | 6.3.1 | Numerical Algorithm | 215 |
| | 6.3.2 | TE Numerical Simulation Results..... | 215 |
| | 6.3.3 | TM Numerical Simulation Results..... | 224 |
| | 6.3.4 | Discussion of Results from Approximate Analysis..... | 226 |
| 6.4 | | Exact Analysis | 227 |
| | 6.4.1 | Finite Difference Kukhtarev Analysis | 229 |
| | 6.4.2 | TM Numerical Simulation Results..... | 231 |
| 6.5 | | Reflection Gratings | 240 |
| | 6.5.1 | RCWA Optical Field Analysis | 240 |
| | 6.5.2 | Material Analysis | 241 |
| | 6.5.3 | Numerical Results | 244 |
| 6.6 | | Conclusion | 246 |
| | | Problems..... | 248 |
| | | References | 249 |
| Chapter 7 | | Rigorous Coupled Wave Analysis of Inhomogeneous Cylindrical and Spherical Systems..... | 253 |
| 7.1 | | Introduction | 253 |
| 7.2 | | Rigorous Coupled Wave Analysis Circular Cylindrical Systems | 254 |
| 7.3 | | Rigorous Coupled Wave Analysis Mathematical Formulation | 255 |
| | 7.3.1 | Introduction | 255 |
| | 7.3.2 | Basic Equations | 256 |
| | 7.3.3 | Numerical Results | 261 |
| 7.4 | | Anisotropic Cylindrical Scattering | 264 |
| | 7.4.1 | Introduction | 264 |
| | 7.4.2 | State Variable Analysis | 265 |
| | 7.4.3 | Numerical Results | 269 |
| 7.5 | | Spherical Inhomogeneous Analysis | 275 |
| | 7.5.1 | Introduction | 275 |
| | 7.5.2 | Rigorous Coupled Wave Theory Formulation | 275 |
| | 7.5.3 | Numerical Results | 283 |
| | | Problems..... | 289 |
| | | References | 291 |

| | | |
|------------------|---|-----|
| Chapter 8 | Rigorous Coupled Wave Analysis of Inhomogeneous Bipolar Cylindrical Systems | 293 |
| 8.1 | Introduction | 293 |
| 8.2 | RCWA Bipolar Coordinate Formulation | 296 |
| 8.2.1 | Bipolar and Eccentric Circular Cylindrical, Scattering Region Coordinate Description | 296 |
| 8.2.2 | Bipolar RCWA State Variable Formulation | 297 |
| 8.2.3 | Second-Order Differential Matrix Formulation | 298 |
| 8.2.4 | Thin-Layer, Bipolar Coordinate Eigenfunction Solution | 299 |
| 8.3 | Bessel Function Solutions in Homogeneous Regions of Scattering System | 301 |
| 8.4 | Thin-Layer SV Solution in the Inhomogeneous Region of the Scattering System | 301 |
| 8.5 | Matching of EM Boundary Conditions at Interior–Exterior Interfaces of the Scattering System | 302 |
| 8.5.1 | Bipolar and Circular Cylindrical Coordinate Relations | 302 |
| 8.5.2 | Details of Region 2 (Inhomogeneous Region)–Region 3 (Homogeneous Interior Region) EM Boundary Value Matching | 303 |
| 8.5.3 | Region 0 (Homogeneous Exterior Region)–Region 2 (Inhomogeneous Region) EM Boundary Value Matching | 306 |
| 8.5.4 | Details of Layer-to-Layer EM Boundary Value Matching in the Inhomogeneous Region | 306 |
| 8.5.5 | Inhomogeneous Region Ladder-Matrix | 308 |
| 8.6 | Region 1–Region 3 Bessel–Fourier Coefficient Transfer Matrix | 309 |
| 8.7 | Overall System Matrix | 312 |
| 8.8 | Alternate Forms of the Bessel–Fourier Coefficient Transfer Matrix | 313 |
| 8.9 | Bistatic Scattering Width | 314 |
| 8.10 | Validation of Numerical Results | 315 |
| 8.11 | Numerical Results—Examples of Scattering from Homogeneous and Inhomogeneous Material Objects | 315 |
| 8.12 | Error and Convergence Analysis | 321 |
| 8.13 | Summary, Conclusions, and Future Work | 327 |
| | Problems | 328 |
| | Appendix 8.A | 333 |
| | Appendix 8.B | 336 |
| | References | 338 |
| Chapter 9 | Bipolar Coordinate RCWA Computational Examples and Case Studies | 341 |
| 9.1 | Introduction | 341 |
| 9.2 | Case Study I: Fourier Series Expansion, Eigenvalue and Eigenfunction Analysis, and Transfer Matrix Analysis | 343 |
| 9.3 | Case Study II: Comparison of KPE BA, BC Validation Methods, and SV Methods for Relatively Small Diameter Scattering Objects | 353 |
| 9.4 | Case Study III: Comparison of BA, BC, and SV Methods for Gradually Stepped-Up, Index Profile Scattering Objects | 356 |
| 9.5 | Case Study IV: Comparison of BA, BC, and SV Methods for Mismatched, Index Profile, Scattering Objects | 368 |
| 9.6 | Case Study V: Comparison of BA, BC, and SV Methods for Gradually Stepped-Up, Index Scattering Objects with High Index Core | 377 |

| | | |
|------|--|-----|
| 9.7 | Case Study VI: Calculation and Convergence Analysis of EM Fields of an Inhomogeneous Region Material Object Using the SV Method, $\Delta\epsilon = 1$, $\alpha = 5.5$, $\Lambda = 0$, Example | 384 |
| 9.8 | Case Study VII: Calculation and Convergence Analysis of EM Fields of an Inhomogeneous Region Material Object Using the SV Method, $\Delta\epsilon = 0.4$, $\alpha = 5.5$, $\Lambda = 0$, Example..... | 388 |
| 9.9 | Case Study VIII: Comparison of Homogeneous and Inhomogeneous Region Bistatic Line Widths..... | 393 |
| 9.10 | Case Study IX: Conservation of Power Analysis | 396 |
| | Appendix 9.A: Interpolation Equations..... | 405 |
| | References | 407 |
| | Index | 409 |
