

ELSEVIER

NANOMATERIALS FOR MEDICAL APPLICATIONS

ZORAIDA P. AGUILAR

Foreword	xi
Preface	xiii
Acknowledgements	xvii

1. Introduction	1
1.1 Nanotechnology Potential Applications and Market Analysis	1
1.2 NMs for Medical Applications	3
1.3 Historical and Future Perspective	13
1.4 The Future of Nanotechnology	16
2. Types of Nanomaterials and Corresponding Methods of Synthesis	33
2.1 Inorganic NMs	35
2.1.1 QD Core Synthesis Protocol	38
2.1.2 QD Core/Shell Synthesis Protocol	39
2.1.3 Water-Soluble QD Core/Shell Synthesis Protocol	40
2.1.4 Ligand-Exchange Reaction to Make QDs Water Soluble	41
2.1.5 Characterization of QDs	41
2.1.6 UV Absorption and Emission	42
2.1.7 Transmission Electron Microscopy	43
2.1.8 Photostability	44
2.1.9 Atomic Absorption Spectroscopy	44
2.2 Gold and Silver NMs	45
2.2.1 Protocol for Citrate AuNP Synthesis	45
2.2.2 Citrate AuNP Characterization	46
2.2.3 AuNP Characterization with X-Ray Photoelectron Spectroscopy	46
2.2.4 Synthesis of Nanorods and Nanostars	49
2.2.5 Protocol for Synthesis of AgNPs	50
2.2.6 Magnetic Nanoparticles	51
2.3 Organic NMs	55
2.3.1 Liposomes	56
2.3.2 Polymeric NPs	58
2.3.3 Chitosan	60
2.3.4 Micelles	61
2.4 Carbon Nanoplatforms	61
2.4.1 Protocol for the Synthesis of CNTs	62
2.4.2 Fullerenes	63

2.5	Dendrimers	64
2.5.1	Protocol for Synthesis Dendrimers	65
2.6	Characterization of NMs	66
2.6.1	ATR-FTIR Spectroscopy	67
2.6.2	XPS	67
2.6.3	Time-of-Flight SIMS	68
2.6.4	Colorimetric Methods	69
2.6.5	AFM	69
2.6.6	DLS for Zeta Potential	69
2.7	Conclusions	70
3.	Biocompatibility and Functionalization	83
3.1	Introduction	83
3.2	Nanomaterial Conversion into the Water-soluble Form	84
3.2.1	Ligand Exchange	85
3.2.2	Thiols for Ligand Exchange	87
3.2.3	Encapsulation of NMs	89
3.2.4	Polymer Coating	91
3.3	NM Bioconjugation	95
3.3.1	NM Bioconjugation Techniques	96
3.3.2	Covalent Conjugation of Biomolecules to NPs	98
3.3.3	Physical Adsorption	102
3.3.4	Electrostatic Charge-charge Interaction	106
3.4	Applications of Biocompatible NMs	106
3.5	Conclusions	111
4.	Nanobiosensors	127
4.1	Introduction	127
4.2	Nanobiosensors Unique Properties	129
4.3	Immobilization Strategies	131
4.3.1	Direct Adsorption	131
4.3.2	Direct Adsorption Protocol	133
4.4	Covalent Binding	135
4.4.1	Covalent Conjugation Protocols	136
4.5	Self-assembled Monolayers	139
4.5.1	Preparation of SAMs on NMs for Protein Detection	140
4.5.2	Preparation of SAMs on Gold NMs for DNA Detection	141
4.6	Quantification of Biomolecules Loaded on NMs	142
4.6.1	Quantification of Protein Capture Probes on the Surface of NMs	142
4.6.2	Quantification of DNA Capture Probes on the Surface of NMs	145
4.7	Transduction Detection Systems for NP Biosensors	147
4.7.1	Optical Detection Methods	148
4.7.2	Electronic Nanobiosensors	155
4.7.3	Other Techniques	158

4.8 Applications	161
4.8.1 DNA Nanobiosensors	161
4.8.2 Protein Nanobiosensors	163
4.8.3 Whole-Cell Nanobiosensors	164
4.8.4 Procedure for QD-Based Detection of Breast Cancer Cells	165
4.9 An IOMNP-Based ELISA for the Detection of Protein Biomarkers for Cancer	167
4.9.1 A Protocol for IOMNP-Based ELISA Detection of Breast Cancer Protein Biomarkers	167
4.10 Conclusions	169
5. Targeted Drug Delivery	181
5.1 Introduction	181
5.2 Nanomaterials as Vehicles for Drug Delivery	182
5.3 Factors to Consider for NPs That Will Be Used for Drug Delivery	185
5.3.1 Surface Charge	185
5.3.2 Particle Size and Size Distribution	186
5.4 Drug Loading	188
5.4.1 Encapsulation of the Drug	189
5.4.2 Attachment of the Drug on the NM Surface	191
5.5 NM Targeting for Drug Delivery	194
5.5.1 Antibodies	195
5.5.2 Peptides	197
5.5.3 Aptamers	198
5.5.4 Small Molecules	199
5.6 Binding and Uptake	200
5.6.1 Uptake by Phagocytic Cells	201
5.6.2 Uptake by Nonphagocytic Cells	202
5.6.3 Uptake by Drug-Resistant Cancer Cells	202
5.7 Drug Release and Biodegradation	202
5.7.1 Factors Affecting Drug Release	202
5.8 NM Clearance	204
5.9 Various NMs for Drug Delivery	206
5.9.1 Polymers	206
5.9.2 Micelles	211
5.9.3 Hydrogels	211
5.9.4 Magnetic NPs	212
5.9.5 Nanotubes	216
5.9.6 Semiconductor NPs	217
5.9.7 Dendrimers	218
5.10 The Blood Brain Barrier (BBB)	218
5.11 Conclusion	221

6.	Nanomedical Devices	235
6.1	Introduction	235
6.2	Nanorobots	236
6.2.1	Nanosurgery	236
6.2.2	Nanocameras	239
6.2.3	Nanoradiofrequency antennas	240
6.2.4	Applications of Nanorobots	240
6.3	Nanochips and Nanoimplants	241
6.3.1	Nanomaterials for Bones	242
6.3.2	Nanomaterials for Cartilage Applications	253
6.3.3	Nanomaterials for Vascular Applications	254
6.3.4	Nanomaterials for Bladder Implants	255
6.3.5	Nanomaterials for Neural Applications	256
6.4	Prosthesis	257
6.5	Tissue Engineering	259
6.5.1	Current Polymer Matrices for Bionanocomposites	262
6.5.2	Examples of Bionanocomposites	263
6.6	Cell Repair	267
6.6.1	Nanomachines for Delivery in Cells	268
6.6.2	Nerve Cell Repair	269
6.6.3	Stem Cells	271
6.7	Conclusion	273
7.	Nanopharmacology	293
7.1	Introduction	293
7.2	Current Issues and Status of Nanopharmacology	294
7.3	NMs for Gene Delivery	297
7.3.1	Gene Delivery with Inorganic NMs	298
7.3.2	Gene Delivery with Biodegradable Polymers	300
7.3.3	Electrostatic Loading of DNA in NMs	302
7.4	Nanoimmunotherapy	304
7.4.1	Protocol for the Preparation of Chitosan IFN- γ pDNA NPs and Green Fluorescent Protein Test of Expression	307
7.4.2	The Use of Ceramic Core NPs as Delivery Systems for Immunotherapy	308
7.4.3	NMs for Tumor Immunotherapy	314
7.4.4	Release of Anti-CD40 and CpG from Liposomes In vitro	317
7.4.5	NMs for Vaccine Delivery	319
7.5	NMs for Thermal Ablation	321
7.5.1	Thermal Ablation Using MNPs	323
7.5.2	Thermal Ablation and NMs Combination Therapeutics	324

7.6	NMs as Contrast Agents	326
7.6.1	NMs Contrast Agents in Clinical Use	327
7.6.2	NMs as Imaging Contrast Agents in Preclinical Development	330
7.7	Magnetic IO NP-mediated Circulating Tumor Cell Isolation	334
7.7.1	IO–Ab Separation of Cancer Cells in Spiked Fresh Human Whole Blood	336
7.8	Design Trends for Individualized Medicine	340
7.9	Conclusions	342
8.	Nanotoxicology and Remediation	361
8.1	Introduction	361
8.2	NMs Exhibiting Toxicity	363
8.2.1	Carbon Nanotubes and Fullerenes	364
8.2.2	Toxicity Evaluation of QDs	367
8.2.3	Gold NMs Toxicity	374
8.2.4	IOMNP Toxicity	375
8.2.5	Silver NPs Toxicity	381
8.3	Handling, Storage, and Disposal of NMs	384
8.3.1	Handling	384
8.3.2	Storage	384
8.3.3	Disposal	384
8.4	Remediation in Case of NMs Spills	385
8.4.1	Spills of NMs in solution	386
8.4.2	Spills of NMs in Powder Form	386
8.5	Nanotoxicity Regulations	387
8.6	The NMs Intellectual Property Perspective	392
8.7	Conclusion	394
9.	Conclusions	409
9.1	Introduction	409
9.2	Market Potential	410
9.3	Synthesis of Various NMs	411
9.4	NMs Surface Modification and Functionalization	412
9.5	Nanobiosensors	413
9.6	NMs for Drug Delivery	416
9.7	Nanomedical Devices	418
9.8	Nanopharmacology	420
9.9	Nanotoxicology	423
9.10	Government Nanotoxicity Regulations	425
9.11	Patent Landscape	427
