<i>Preface</i>	<i>page xvii</i>
<i>Acknowledgments</i>	<i>xxi</i>
<i>Guide to Instructors and Students</i>	<i>xxiii</i>
1 Introduction and Preliminaries	1
1.1 Applications and History	1
1.1.1 Heat Transfer	3
1.1.2 Applications	4
1.1.3 History, Frontiers, and Integration*	
1.2 Units and Normalization (Scaling)	11
1.2.1 Units	11
1.2.2 Normalization (Scaling)	13
1.3 Thermal Systems	13
1.3.1 Thermodynamic Properties	14
1.3.2 Thermal Nonequilibrium	14
1.3.3 Control Volume and Control Surface	15
1.4 Principal Energy Carriers and Heat Flux Vector	18
1.4.1 Macroscopic Heat Transfer Mechanisms	18
1.4.2 Atomic-Level Heat Carriers (Heat Transfer Physics)	20
1.4.3 Net Heat Transfer Rate $Q _A$	23
1.4.4 Magnitude and Representation of \mathbf{q}	25
1.5 Heat Transfer Materials and Heat Flux Tracking	28
1.5.1 Three Phases of Matter: Intermolecular and Intramolecular Forces*	
1.5.2 Microscale Energies of Matter: Discrete and Continuous Energies*	
1.5.3 Multiphase Heat Transfer Medium: Composites	29
1.5.4 Fluid Motion	29
1.5.5 Intramedium and Intermedium Heat Transfer	32
1.5.6 Heat Flux Vector Tracking in Various Phases	32

* This section is found on the Web at www.cambridge.org/kaviany.

Contents

1.6	Conservation of Energy	34
1.7	Conservation of Mass, Species, and Momentum*	
1.7.1	Conservation of Mass*	
1.7.2	Conservation of Species*	
1.7.3	Conservation of Momentum*	
1.7.4	Other Conserved Quantities*	
1.8	Scope	45
1.9	Summary	46
1.10	References*	
1.11	Problems	48
1.11.1	Heat Flux Vector Tracking	48
1.11.2	Integral-Volume Energy Equation	57
2	Energy Equation	66
2.1	Nonuniform Temperature Distribution: Differential (Infinitesimal)-Volume Energy Equation	68
2.1.1	Physical Interpretation of Divergence of \mathbf{q}	70
2.1.2	Relation between Volumetric Differentiation and Surface Integration	72
2.2	Uniform Temperature in One or More Directions: Energy Equation for Volumes with One or More Finite Lengths	76
2.2.1	Integral-Volume Energy Equation	76
2.2.2	Combined Integral- and Differential-Length Energy Equation	81
2.2.3	Discrete Temperature Nonuniformity: Finite-Small-Volume Energy Equation*	
2.2.4	Summary of Selection of Energy Equation Based on Uniformity or Nonuniformity of Temperature	85
2.3	Thermal Energy Conversion Mechanisms	86
2.3.1	Chemical- or Physical-Bond Energy Conversion	87
2.3.2	Electromagnetic Energy Conversion	96
2.3.3	Mechanical Energy Conversion	111
2.3.4	Summary of Thermal Energy Conversion Mechanisms	119
2.4	Bounding-Surface and Far-Field Thermal Conditions	120
2.4.1	Continuity of Temperature across Bounding Surface*	121
2.4.2	Bounding-Surface Energy Equation	121
2.4.3	Prescribed Bounding-Surface Thermal Conditions*	
2.4.4	Far-Field Thermal Conditions*	
2.5	Heat Transfer Analysis*	
2.5.1	Integration of Differential-Volume Energy Equation*	
2.5.2	Single- and Multidimensional Heat Flow*	
2.5.3	Time Dependence and Steady State*	

* This section is found on the Web at www.cambridge.org/kaviany.

Contents

2.5.4 Thermal Circuit Models*	
2.5.5 Summary of Methodology for Heat Transfer Analysis*	
2.5.6 Solution Format for End-of-Chapter Problems*	
2.6 Summary	123
2.7 References*	
2.8 Problems	124
2.8.1 Finite- and Differential-Length Energy Equation	124
2.8.2 Energy Conversion Mechanisms (to and from Thermal Energy)	133
2.8.3 Bounding-Surface Thermal Conditions	145
2.8.4 General*	
3 Conduction	152
3.1 Microscale Heat Storage and Specific Heat Capacity c_p	154
3.1.1 Gases: Thermal Fluctuation Motion	155
3.1.2 Solids: Lattice Vibration and Phonon	157
3.1.3 Liquids: Solid-Like versus Gas-Like	159
3.1.4 Thermal Materials: From Zero to Infinite Heat Capacity	160
3.2 Microscale Conduction Heat Carriers and Thermal Conductivity k	163
3.2.1 Gases: Thermal Fluctuation Motion and Mean-Free Path λ_f	165
3.2.2 Solids: Electrons and Phonons and Their Mean-Free Paths λ_e and λ_p	169
3.2.3 Liquids	180
3.2.4 Composites: Local Thermal Equilibrium and Effective Conductivity	180
3.2.5 Thermal Materials: From Ideal Insulators to Ideal Conductors	184
3.3 Steady-State Conduction	191
3.3.1 One-Dimensional, Intramedium Conduction: Electrical Circuit Analogy and Thermal Resistance $R_k(^{\circ}\text{C}/\text{W})$	194
3.3.2 One-Dimensional Treatment of Composites	203
3.3.3 Thermal Circuit Analysis	215
3.3.4 Conduction Thermometry*	
3.3.5 Contact Resistance	221
3.3.6 Conduction and Energy Conversion	225
3.3.7 Thermoelectric Coolers	230
3.3.8 Multidimensional Conduction from Buried and Surface Objects*	
3.4 Transient Conduction	240
3.4.1 Heat Conductivity versus Capacity: Thermal Diffusivity α	240

* This section is found on the Web at www.cambridge.org/kaviany.

Contents

3.4.2 Short and Long Elapsed-Time Behavior: Fourier Number Fo	242
3.4.3 Distributed versus Lumped Capacitance: Internal-External Conduction Number N_k	243
3.5 Distributed-Capacitance (Nonuniform Temperature) Transient: $T = T(\mathbf{x}, t)$	243
3.5.1 Derivation of Temperature Distribution for Semi-Infinite Slab: Thermal Effusivity $(\rho c_p k)^{1/2}$	252
3.5.2 Penetration Depth δ_α , Penetration Fourier Number Fo_δ , and Penetration Speed u_δ	258
3.5.3 Time-Dependent Surface Temperature: Semi-Infinite Slab*	
3.5.4 Thermal Diffusivity Meter*	
3.6 Lumped-Capacitance (Uniform Temperature) Transient: Internal-External Conduction Number $N_{k,i} < 0.1$, $T = T(t)$	263
3.6.1 Single Node with Constant, Prescribed Surface Heat Transfer Q_1	266
3.6.2 Single Node with Resistive Surface Heat Transfer $Q_{k,1-2}(t)$	268
3.6.3 Multiple Nodes*	
3.7 Discretization of Medium into Finite-Small Volumes*	
3.7.1 One-Dimensional Transient Conduction*	
3.7.2 Two-Dimensional Transient Conduction*	
3.7.3 Nonuniform Discretization*	
3.8 Conduction and Solid-Liquid Phase Change: Stefan Number Ste_l *	
3.9 Thermal Expansion and Thermal Stress*	
3.10 Summary	273
3.11 References*	
3.12 Problems	275
3.12.1 Microscales of Specific Heat Capacity and Thermal Conductivity	275
3.12.2 Thermal Conduction Resistance and Thermal Circuit Analysis	281
3.12.3 Conduction Contact Resistance	290
3.12.4 Conduction and Energy Conversion and Thermoelectric Cooling	294
3.12.5 Multidimensional Conduction	302
3.12.6 Distributed-Capacitance Transient Conduction and Penetration Depth	307
3.12.7 Lumped-Capacitance Transient Conduction	315
3.12.8 Multinode Systems and Finite-Small-Volume Analysis*	

* This section is found on the Web at www.cambridge.org/kaviany.

3.12.9	Solid–Liquid Phase Change	323
3.12.10	Thermal Expansion and Thermal Stress*	
3.12.11	General*	
4	Radiation	324
4.1	Microscale Radiation Heat Carrier: Photon and Surface	
	Thermal Radiation Emission	326
4.1.1	Thermal Radiation	326
4.1.2	Ideal Photon Emission: Emissive Power $E_{b,\lambda}$, E_b	326
4.1.3	Band Fraction $F_{0-\lambda,T}$	330
4.1.4	Deviation from Ideal Emission: Emissivity ϵ_r	334
4.2	Interaction of Irradiation and Surface	337
4.2.1	Surface-Radiation Properties: Absorptivity α_r , Reflectivity ρ_r , and Transmissivity τ_r	339
4.2.2	Opaque Surface $\tau_r = 0$	342
4.2.3	Relation among Absorptivity, Emissivity, and Reflectivity for Opaque Surfaces	344
4.3	Thermal Radiometry*	
4.3.1	Pyranometer*	
4.3.2	Infrared Surface-Temperature Sensor*	
4.4	Enclosure Surface-Radiation Heat Transfer $Q_{r,i}$ among Gray, Diffuse, and Opaque Surfaces	347
4.4.1	Surface-Grayness Resistance $R_{r,\epsilon}(1/m^2)$	348
4.4.2	View-Factor Resistance $R_{r,F}(1/m^2)$	350
4.4.3	Thermal Circuit Analysis of Enclosures	356
4.4.4	Two-Surface Enclosures	360
4.4.5	Radiation Insulators (Shields)	362
4.4.6	Three-Surface Enclosures	366
4.4.7	Three-Surface Enclosures with One Surface Having $\dot{S} - Q = 0$	371
4.5	Prescribed Irradiation and Nongray Surfaces*	
4.5.1	Laser Irradiation $(q_{r,i})_l^*$	
4.5.2	Solar Irradiation $(q_{r,i})_s^*$	
4.5.3	Flame Irradiation $(q_{r,i})_f^*$	
4.5.4	Nongray Surfaces*	
4.6	Inclusion of Substrate	375
4.6.1	Steady-State, Series Conduction-Surface Radiation, Conduction-Radiation Number N_r	375
4.6.2	Transient Heat Transfer: Lumped Capacitance for $N_r < 0.1$	384
4.7	Summary	388
4.8	References*	

* This section is found on the Web at www.cambridge.org/kaviany.

4.9	Problems	389
4.9.1	Volumetric and Surface-Radiation Fundamentals	389
4.9.2	View Factor	393
4.9.3	Two-Surface, Opaque, Diffuse Gray Enclosures	394
4.9.4	Three-Surface, Opaque, Diffuse Gray Enclosures	402
4.9.5	Nongray Surfaces and Prescribed Irradiation	405
4.9.6	Inclusion of Substrate	410
4.9.7	General*	
5	Convection: Unbounded Fluid Streams*	
5.1	One-Dimensional Conduction-Convection Energy Equation*	
5.2	Parallel Conduction-Convection Resistance $R_{k,u}$ ($^{\circ}\text{C}/\text{W}$) and Conduction-Convection Number $N_u \equiv \text{Pe}_L$ *	
5.3	Evaporation Cooling of Gaseous Streams*	
5.3.1	Cooling of Gaseous Streams*	
5.3.2	Cooling of Liquid and Gaseous Streams by Wall Seepage and Surface Evaporation*	
5.4	Combustion Heating of Gaseous Streams*	
5.4.1	Conservation Equations, Adiabatic Flame Temperature, and Far-Field Thermal Conditions*	
5.4.2	Preheat and Reaction Regions*	
5.4.3	Adiabatic Flame Speed $u_{f,1}$ and Thickness δ *	
5.4.4	Nonadiabatic Flame Speed: Lateral Heat Losses*	
5.4.5	Effect of Thermal Conductivity: Effective Thermal Conductivity*	
5.4.6	Volumetric Radiation Heat Transfer: Radiant (Photon) Conductivity $\langle k_r \rangle$ *	
5.4.7	Effect of Free-Stream Turbulence: Turbulence Intensity Tu *	
5.5	Joule Heating of Gaseous Streams*	
5.5.1	Thermal Plasma Generators*	
5.5.2	Thermal Plasma Classification*	
5.5.3	Integral-Length Analysis*	
5.6	Gas-Stream Volumetric Radiation*	
5.7	Summary*	
5.8	References*	
5.9	Problems*	
6	Convection: Semi-Bounded Fluid Streams	426
6.1	Flow and Surface Characteristics	427
6.2	Semi-Infinite Plate as a Simple Geometry	430
6.2.1	Local Surface-Convection Resistance R_{ku} ($^{\circ}\text{C}/\text{W}$)	430

* This section is found on the Web at www.cambridge.org/kaviany.

Contents

6.2.2	Viscous versus Thermal Boundary Layer: Prandtl Number Pr	431
6.2.3	Boundary-Layer Flow with Zero Prandtl Number: Axial-Lateral Péclet Number Pe_L	432
6.2.4	Dimensionless Surface-Convection Conductance: Nusselt Number $Nu_L \equiv N_{ku,f}$ and Heat Transfer Coefficient h	439
6.2.5	Nonzero Prandtl Number: Reynolds Number Re_L	444
6.2.6	Average Nusselt Number $\langle Nu \rangle_L$ and Average Surface-Convection Resistance $\langle R_{ku} \rangle_L$	450
6.3	Parallel Turbulent Flow: Transition Reynolds Number $Re_{L,t}$	454
6.3.1	Turbulent Convection Heat Flux*	
6.3.2	Microscale Turbulent Convection: Turbulent Conductivity k_t and Turbulent Mixing Length λ_t *	457
6.3.3	Variation of Turbulent Mixing Length Near Solid Surface*	
6.3.4	Averaged, Laminar-Turbulent Nusselt Number	457
6.4	Perpendicular Flows: Impinging Jets	461
6.5	Thermobuoyant Flows	466
6.5.1	Laminar Flow Adjacent to Vertical Plates: Grashof and Rayleigh Numbers Gr_L, Ra_L	469
6.5.2	Turbulent Thermobuoyant Flow over Vertical Plate	475
6.5.3	Combined Thermobuoyant-Forced Parallel Flows	476
6.6	Liquid-Gas Phase Change	478
6.6.1	Theoretical Maximum Heat Flux for Evaporation and Condensation q_{max} (Kinetic Limit)*	
6.6.2	Bubble and Film Evaporation: Pool Boiling Regimes	481
6.6.3	Dropwise and Film Condensation*	
6.6.4	Impinging-Droplets Surface Convection with Evaporation*	
6.7	Summary of Nusselt Number Correlations	490
6.7.1	Sphere: Forced-Flow Regimes and Correlations	490
6.7.2	Tabular Presentation of Correlations for Some Flows and Geometries	493
6.8	Inclusion of Substrate	505
6.8.1	Steady-State, Series Conduction-Surface Convection: Conduction-Convection or Biot Number $N_{ku,s} \equiv Bi_L$	506
6.8.2	Steady-State Simultaneous Conduction-Surface Convection: Extended Surface and Fin Efficiency η_f	514
6.8.3	Transient: Lumped Capacitance for $Bi_L < 0.1$	523
6.8.4	Hot-Wire Anemometry*	
6.9	Surface-Convection Evaporation Cooling*	
6.10	Summary	533
6.11	References*	

* This section is found on the Web at www.cambridge.org/kaviany.

6.12 Problems	534
6.12.1 Laminar Parallel-Flow Surface Convection	534
6.12.2 Turbulent Parallel-Flow Surface Convection	537
6.12.3 Impinging-Jet Surface Convection	538
6.12.4 Thermobuoyant-Flow Surface Convection	541
6.12.5 Boiling and Condensation Surface Convection	545
6.12.6 Impinging-Droplets Surface Convection	547
6.12.7 Surface Convection with Other Flows and Geometries	549
6.12.8 Inclusion of Substrate	555
6.12.9 Surface-Convection Evaporation Cooling*	
6.12.10 General*	
7 Convection: Bounded Fluid Streams	570
7.1 Flow and Surface Characteristics	570
7.2 Tube Flow and Heat Transfer	574
7.2.1 Velocity-Area Averaged Fluid Temperature	575
7.2.2 Tube-Surface Temperature T_s : Uniform or Varying	576
7.2.3 Local and Average Surface-Convection Resistance: Nusselt Number Nu_D , $\langle Nu \rangle_D$	576
7.2.4 Negligible Axial Conduction: Large Péclet Number	578
7.2.5 Axial Variation of Fluid Temperature for Uniform T_s : Effectiveness ϵ_{he} and Number of Transfer Units NTU	578
7.2.6 Average Convection Resistance $\langle R_u \rangle_L$ ($^{\circ}\text{C}/\text{W}$)	583
7.2.7 Prescribed Uniform Surface Heat Flux q_s	584
7.3 Laminar and Turbulent Flows, Entrance Effect, Thermobuoyant Flows, and Phase Change	588
7.3.1 Laminar versus Turbulent Flow: Transition Reynolds Number $Re_{D,t}$	588
7.3.2 Developing versus Fully Developed Region, Entrance Length L_δ : Laminar Flow	589
7.3.3 Entrance Length L_δ : Turbulent Flow	590
7.3.4 Thermobuoyant Flows	590
7.3.5 Liquid-Gas Phase Change	591
7.4 Summary of Nusselt Number Correlations	593
7.4.1 Laminar Flow: Tube Cross-Sectional Geometry Dependence	593
7.4.2 Turbulent Flow: Geometric Universality of Using Hydraulic Diameter D_h	595
7.4.3 Discontinuous Solid Surfaces and Large Specific Surface Areas: Geometric Universality of Particle Diameter D_p	596
7.4.4 Extended Surfaces: Overall Surface Efficiency	599

* This section is found on the Web at www.cambridge.org/kaviany.

7.4.5	Tabular Presentation of Correlation for Some Geometries	599
7.5	Inclusion of Bounding Solid	609
7.6	Heat Exchange between Two Bounded Streams	614
7.6.1	Exit Temperatures in Coaxial Heat Exchangers	615
7.6.2	Heat Exchanger Effectiveness ϵ_{he} and Number of Transfer Units NTU	618
7.6.3	ϵ_{he} - NTU Relation for Other Heat Exchangers	620
7.6.4	Heat Exchanger Analysis	622
7.6.5	Overall Thermal Resistance in Heat Exchangers R_{Σ}	627
7.6.6	Dielectric and Inert Heat-Transfer Fluids*	
7.7	Summary	628
7.8	References*	
7.9	Problems	629
7.9.1	Average Convection Resistance and ϵ_{he} - NTU	629
7.9.2	Tubes and Ducts: Hydraulic Diameter	632
7.9.3	High Specific Surface Area: Particle Diameter	637
7.9.4	Inclusion of Bounding Solid and Other Flows	643
7.9.5	Heat Exchangers	648
7.9.6	Overall Thermal Resistance in Heat Exchangers R_{Σ}	654
7.9.7	General*	
8	Heat Transfer in Thermal Systems*	
8.1	Primary Thermal Functions*	
8.1.1	Primary Functions of Heat Transfer Media*	
8.1.2	Primary Thermal Functions of Bounding Surfaces*	
8.1.3	Heat Transfer Material*	
8.2	Thermal Engineering Analysis*	
8.2.1	Simplifications, Approximations, and Assumptions: Modeling*	
8.2.2	Nodal Energy Equation*	
8.2.3	Simultaneous Inclusion of Various Heat Transfer Mechanisms*	
8.2.4	Optimization*	
8.3	Examples*	
8.4	Summary*	
8.5	References*	
8.6	Problems*

Contents

Appendix A: Some Thermodynamic Relations*

- A.1 Simple, Compressible Substance*
 - A.1.1 Internal Energy and Specific Heat Capacity at Constant Volume*
 - A.1.2 Specific Enthalpy and Specific Heat Capacity at Constant Pressure*
- A.2 Phase Change and Heat of Phase Change*
- A.3 Chemical Reaction and Heat of Reaction*
- A.4 References*

Appendix B: Derivation of Differential-Volume Energy Equation*

- B.1 Total Energy Equation*
- B.2 Mechanical Energy Equation*
 - B.2.1 Mass Conservation Equation*
 - B.2.2 Species Conservation Equation*
 - B.2.3 Momentum Conservation Equation*
 - B.2.4 Mechanical Energy Equation*
- B.3 Thermal Energy Equation*
- B.4 Thermal Energy Equation: Enthalpy Formulation*
- B.5 Thermal Energy Equation: Temperature Formulation*
- B.6 Conservation Equations in Cartesian and Cylindrical Coordinates*
 - B.6.1 Cartesian Coordinates, $\mathbf{x} = (x, y, z)$ and $\mathbf{u} = (u, v, w)^*$
 - B.6.2 Cylindrical Coordinates, $\mathbf{x} = (r, \phi, z)$ and $\mathbf{u} = (u_r, u_\phi, u_z)^*$
- B.7 Bounding-Surface Energy Equation with Phase Change*
- B.8 References*

Appendix C: Tables of Thermochemical and Thermophysical Properties 680

C.1 Tables	
Unit Conversion, Universal Constants, Dimensionless Numbers, Energy Conversion Relations, and Geometrical Relations	682
Periodic Table and Phase Transitions	686
Atmospheric Thermophysical Properties*	
Electrical and Acoustic Properties	689
Thermal Conductivity	693
Thermophysical Properties of Solids	701
Surface-Radiation Properties	705
Mass Transfer and Thermochemical Properties of Gaseous Fuels*	
Thermophysical Properties of Fluids	708
Liquid-Gas Surface Tension*	
Saturated Liquid-Vapor Properties*	
C.2 References*	
<i>Subject Index</i>	717
