<b>Acknowledgements</b>	<b>xvii</b>

## **I ANALYSING THE BEHAVIOUR OF INFORMATION-POOR SYSTEMS**

<b>1</b>	<b>Characteristics of Information-Poor Systems</b>	<b>3</b>
1.1	Introduction to Information-Poor Systems	3
1.1.1	<i>Blast Furnaces</i>	3
1.1.2	<i>Container Cranes</i>	3
1.1.3	<i>Cooperative Control Systems</i>	4
1.1.4	<i>Distillation Columns</i>	4
1.1.5	<i>Drug Administration</i>	4
1.1.6	<i>Electrical Power Generation and Distribution</i>	4
1.1.7	<i>Environmental Risk Assessment Systems</i>	4
1.1.8	<i>Financial Investment and Portfolio Selection</i>	5
1.1.9	<i>Health Care Systems</i>	5
1.1.10	<i>Indoor Climate Control</i>	5
1.1.11	<i>NO<sub>x</sub> Emissions from Gas Turbines and Internal Combustion Engines</i>	6
1.1.12	<i>Penicillin Production Plant</i>	6
1.1.13	<i>Polymerization Reactors</i>	6
1.1.14	<i>Rotary Kilns</i>	6
1.1.15	<i>Solar Power Plant</i>	7
1.1.16	<i>Wastewater Treatment Plant</i>	7
1.1.17	<i>Wood Pulp Production Plant</i>	7
1.2	Main Causes of Uncertainty	7
1.2.1	<i>Sources of Modelling Errors</i>	8
1.2.2	<i>Sources of Measurement Errors</i>	8
1.2.3	<i>Reasons for Poorly Defined Objectives and Constraints</i>	9
1.3	Design in the Face of Uncertainty	9
	References	9

<b>2</b>	<b>Describing and Propagating Uncertainty</b>	<b>13</b>
2.1	Methods of Describing Uncertainty	13
2.1.1	<i>Uncertainty Intervals and Probability Distributions</i>	13
2.1.2	<i>Fuzzy Sets and Fuzzy Numbers</i>	14
2.2	Methods of Propagating Uncertainty	15
2.2.1	<i>Interval Arithmetic</i>	15
2.2.2	<i>Statistical Methods</i>	16
2.2.3	<i>Monte Carlo Methods</i>	16
2.2.4	<i>Fuzzy Arithmetic</i>	17
2.3	Fuzzy Arithmetic Using $\alpha$ -Cut Sets and Interval Arithmetic	18
2.4	Fuzzy Arithmetic Based on the Extension Principle	21
2.5	Representing and Propagating Uncertainty Using Pseudo-Triangular Membership Functions	24
2.6	Summary	27
	References	27
<b>3</b>	<b>Accounting for Measurement Uncertainty</b>	<b>29</b>
3.1	Measurement Errors	29
3.2	Introduction to Fuzzy Random Variables	29
3.2.1	<i>Definition of a Fuzzy Random Variable</i>	30
3.2.2	<i>Generating Fuzzy Random Variables from a Knowledge of the Random and Systematic Errors</i>	30
3.3	A Hybrid Approach to the Propagation of Uncertainty	32
3.4	Fuzzy Sensor Fusion Based on the Extension Principle	34
3.5	Fuzzy Sensors	38
3.6	Summary	39
	References	39
<b>4</b>	<b>Accounting for Modelling Errors in Fuzzy Models</b>	<b>41</b>
4.1	An Introduction to Rule-Based Models	41
4.2	Linguistic Fuzzy Models	41
4.2.1	<i>Fuzzy Rules</i>	41
4.2.2	<i>Fuzzy Inferencing</i>	42
4.2.3	<i>Compositional Rules of Inference</i>	43
4.3	Functional Fuzzy Models	47
4.4	Fuzzy Neural Networks	48
4.5	Methods of Generating Fuzzy Models	50
4.5.1	<i>Modifying Expert Rules to Take Account of Uncertainty</i>	50
4.5.2	<i>Identifying Fuzzy Rules from Data</i>	56
4.6	Defuzzification	58
4.7	Summary	60
	References	60
<b>5</b>	<b>Fuzzy Relational Models</b>	<b>63</b>
5.1	Introduction to Fuzzy Relations and Fuzzy Relational Models	63
5.2	Fuzzy FRMs	65

5.3	Methods of Estimating Rule Confidences from Data	67
5.4	Estimating Probability Density Functions from Data	70
5.4.1	<i>Probabilistic Interpretation of RSK Fuzzy Identification</i>	71
5.4.2	<i>Effect of Structural Errors on the Output of a Fuzzy FRM</i>	78
5.4.3	<i>Estimation Based on Limited Amounts of Training Data</i>	83
5.5	Generic Fuzzy Models	86
5.5.1	<i>Identification of Generic Fuzzy Models</i>	87
5.5.2	<i>Reducing the Time Required to Generate the Training Data</i>	91
5.6	Summary	92
	References	92

## II CONTROL OF INFORMATION-POOR SYSTEMS

<b>6</b>	<b>Fuzzy Decision-Making</b>	<b>97</b>
6.1	Risk Assessment in Information-Poor Systems	97
6.2	Fuzzy Optimization in Information-Poor Systems	99
6.2.1	<i>Fuzzy Goals and Fuzzy Constraints</i>	99
6.2.2	<i>Fuzzy Aggregation Operators</i>	99
6.2.3	<i>Fuzzy Ranking</i>	100
6.3	Multi-Stage Decision-Making	101
6.3.1	<i>Fuzzy Dynamic Programming</i>	102
6.3.2	<i>Branch and Bound</i>	103
6.3.3	<i>Genetic Algorithms</i>	106
6.4	Fuzzy Decision-Making Based on Intuitionistic Fuzzy Sets	106
6.4.1	<i>Definition of an Intuitionistic Fuzzy Set</i>	106
6.4.2	<i>Multi-Attribute Decision-Making Using Intuitionistic Fuzzy Numbers</i>	107
6.5	Summary	108
	References	108
<b>7</b>	<b>Predictive Control in Uncertain Systems</b>	<b>111</b>
7.1	Model-Based Predictive Control	111
7.2	Fuzzy Approaches to Model-Based Control of Uncertain Systems	112
7.2.1	<i>Inverse Control of Fuzzy Interval Systems</i>	112
7.2.2	<i>Fuzzy Model-Based Predictive Control</i>	114
7.3	Practical Issues Associated with Multi-Step Fuzzy Decision-Making	115
7.3.1	<i>Limiting the Accumulation of Uncertainty</i>	115
7.3.2	<i>Avoiding Excessive Computational Demands When Using Enumerative Search Optimization</i>	115
7.3.3	<i>Avoiding Excessive Computational Demands When Using Evolutionary Algorithms</i>	116
7.3.4	<i>Handling Infeasibility</i>	117
7.3.5	<i>Choosing the Weighting in Multi-Criteria Cost Functions</i>	117
7.3.6	<i>Dealing with Hard Constraints</i>	118

7.4	A Simplified Approach to Fuzzy FRM-Based Predictive Control	118
7.4.1	<i>The Fuzzy Decision-Maker</i>	119
7.4.2	<i>Conditional Defuzzification</i>	120
7.5	FMPC of an Uncertain Dynamic System Based on a Generic Fuzzy FRM	122
7.6	Summary	127
	References	128
<b>8</b>	<b>Incorporating Fuzzy Inputs</b>	<b>129</b>
8.1	Fuzzy Setpoints and Fuzzy Measurements	129
8.1.1	<i>Fuzzy Setpoints</i>	129
8.1.2	<i>Fuzzy Measurements</i>	129
8.2	Fuzzy Measures of the Tracking Error and its Derivative	131
8.3	Inference with Fuzzy Inputs	136
8.4	Fuzzy Output Neural Networks	138
8.5	Modelling Input Uncertainty Using a Fuzzy FRM	140
8.6	Summary	151
	References	151
<b>9</b>	<b>Disturbance Rejection in Information-Poor Systems</b>	<b>153</b>
9.1	Rejecting Unmeasured Disturbances in Uncertain Systems	154
9.1.1	<i>Robust Fuzzy Control</i>	154
9.1.2	<i>Feedback Linearization Using a Fuzzy Disturbance Observer</i>	155
9.1.3	<i>Fuzzy Model-Based Internal Model Control</i>	155
9.2	Fuzzy IMC Based on a Fuzzy Output FRM	157
9.3	Rejecting Measured Disturbances in Non-Linear Uncertain Systems	161
9.4	Fuzzy MPC with Feedforward	162
9.5	Summary	166
	References	166
<b>III</b>	<b>ONLINE LEARNING IN INFORMATION-POOR SYSTEMS</b>	
<b>10</b>	<b>Online Model Identification in Information-Poor Environments</b>	<b>171</b>
10.1	Online Fuzzy Identification Schemes	171
10.1.1	<i>Recursive Fuzzy Least-Squares</i>	171
10.1.2	<i>Recursive Forms of the RSK Algorithm</i>	172
10.2	Effect of Poor-Quality and Incomplete Training Data	176
10.3	Ways of Reducing the Computational Demands	177
10.3.1	<i>Evolving Fuzzy Models</i>	177
10.3.2	<i>Hierarchical Fuzzy Models</i>	181
10.4	Summary	185
	References	185
<b>11</b>	<b>Adaptive Model-Based Control of Information-Poor Systems</b>	<b>187</b>
11.1	Robust Adaptive Fuzzy Control	187
11.2	Adaptive Fuzzy FRM-Based Predictive Control	188

11.3	Commissioning the Controller	189
11.3.1	<i>Methods of Incorporating Prior Knowledge</i>	189
11.3.2	<i>Initialization Using a Generic Fuzzy FRM</i>	189
11.4	Generating an Optimal Control Signal Using a Partially Trained Model	192
11.4.1	<i>Taking the Amount of Training into Account</i>	192
11.4.2	<i>Incorporating a Secondary Controller</i>	194
11.4.3	<i>Combining the Fuzzy Predictions Generated by More than One Model</i>	201
11.5	Dealing with the Effects of Disturbances	202
11.5.1	<i>Adaptive Feedforward Control Based on an Inaccurate Disturbance Measurement</i>	203
11.6	Summary	209
	References	209
<b>12</b>	<b>Adaptive Model-Free Control of Information-Poor Systems</b>	<b>211</b>
12.1	Introduction to Model-Free Adaptive Control of Non-Linear Systems	211
12.2	Fuzzy FRM-Based Direct Adaptive Control	211
12.3	Behaviour in the Presence of a Noisy Measurement of the Plant Output	213
12.4	Behaviour in the Presence of an Unmeasured Disturbance	218
12.5	Accounting for Uncertainty Arising from a Measured Disturbance	222
12.6	Summary	227
	References	227
<b>13</b>	<b>Fault Diagnosis in Information-Poor Systems</b>	<b>229</b>
13.1	Introduction to Fault Detection and Isolation in Non-Linear Uncertain Systems	229
13.1.1	<i>Model-Based Methods for Non-Linear Systems</i>	230
13.1.2	<i>Ways of Accounting for Uncertainty</i>	232
13.2	A Fuzzy FRM-Based Fault Diagnosis Scheme	233
13.2.1	<i>Measuring the Similarity of FRMs</i>	234
13.2.2	<i>Accumulating Evidence of Fault-Free or Faulty Operation</i>	236
13.2.3	<i>Generating Robust Generic Models of Faulty Operation</i>	239
13.2.4	<i>Multi-Step Fault Diagnosis</i>	239
13.3	Summary	242
	References	243
<b>IV</b>	<b>SOME EXAMPLE APPLICATIONS</b>	
<b>14</b>	<b>Control of Thermal Comfort</b>	<b>247</b>
14.1	Main Sources of Uncertainty and Practical Considerations	248
14.2	Review of Approaches Suggested for Dealing with the Uncertainty	249
14.3	Design of the Fuzzy FRM-Based Control System	249
14.3.1	<i>The Fuzzy FRM</i>	250
14.3.2	<i>The Fuzzy Cost Functions</i>	252
14.3.3	<i>The Fuzzy Goals</i>	252
14.3.4	<i>The Fuzzy Decision-Maker</i>	254
14.3.5	<i>The Conditional Defuzzifier</i>	254

14.4	Performance of the Thermal Comfort Controller	254
14.5	Concluding Remarks	258
	References	259
<b>15</b>	<b>Identification of Faults in Air-Conditioning Systems</b>	<b>261</b>
15.1	Main Sources of Uncertainty and Practical Considerations	261
15.2	Design of a Fuzzy FRM-Based Monitoring System for a Cooling Coil Subsystem	263
15.3	Diagnosis of Known Faults in a Simulated Cooling Coil Subsystem	264
15.3.1	<i>Fault-Free Operation</i>	264
15.3.2	<i>Leaky Valve</i>	264
15.3.3	<i>Fouled Coil</i>	265
15.3.4	<i>Valve Stuck in the Fully Closed Position</i>	266
15.3.5	<i>Valve Stuck in the Midway Position</i>	267
15.3.6	<i>Valve Stuck in the Fully Open Position</i>	268
15.4	Commissioning of Air-Handling Units	269
15.5	Concluding Remarks	272
	References	272
<b>16</b>	<b>Control of Heat Exchangers</b>	<b>275</b>
16.1	Main Sources of Uncertainty and Practical Considerations	275
16.2	Design of a Fuzzy FRM-Based Predictive Controller	276
16.3	Design of a Fuzzy FRM-Based Internal Model Control Scheme	283
16.4	Concluding Remarks	290
	References	290
<b>17</b>	<b>Measurement of Spatially Distributed Quantities</b>	<b>293</b>
17.1	Review of Approaches Suggested for Dealing with Sensor Bias	293
17.2	An Example Application	294
17.2.1	<i>Air Temperature Estimation Using a Single-Point Sensor with Bias Correction</i>	294
17.2.2	<i>Air Temperature Estimation Based on Mass and Energy Balances</i>	299
17.3	Using Bias Estimation and Fuzzy Data Fusion to Improve Automated Commissioning in Air-Handling Units	302
17.3.1	<i>Diagnosis When the Measurement Bias is Estimated Accurately</i>	303
17.3.2	<i>Diagnosis When the Estimate of the Measurement Bias is Inaccurate</i>	303
17.4	Concluding Remarks	305
	References	306
