List of Symbols . . . . .	xiii
List of Computer Programs . . . . .	xv
Preface (to the second edition) . . . . .	xvii
Preface (to the first edition) . . . . .	xix
<b>1 Introduction . . . . .</b>	<b>1</b>
1.1 Modeling of engineering systems . . . . .	2
1.2 Review of statics . . . . .	4
1.2.1 Some definitions and concepts . . . . .	4
1.2.2 Laws of motion . . . . .	5
1.2.3 Free body diagrams . . . . .	6
1.2.4 Conditions of equilibrium . . . . .	8
1.2.5 Examples . . . . .	9
1.3 Concepts of stress and strain . . . . .	17
1.3.1 Definition of stress . . . . .	17
1.3.2 Normal and shear stresses . . . . .	19
1.3.3 Stress concentrations . . . . .	24
1.3.4 Allowable stresses . . . . .	26
1.3.5 Definitions of strain . . . . .	28
1.4 Influence of material properties . . . . .	30
1.5 Principles of mechanics of solids . . . . .	33
1.6 Use of numerical methods and computers . . . . .	35
Problems . . . . .	36
<b>2 Statically Determinate Systems . . . . .</b>	<b>45</b>
2.1 Pin-jointed structures . . . . .	45
2.1.1 Equilibrium analysis of plane pin-jointed structures . . . . .	49
2.1.2 Method of sections for plane pin-jointed structures . . . . .	61

2.1.3 A computer program for plane pin-jointed structures . . . . .	62
2.1.4 Analysis of space frames . . . . .	72
2.2 Uniformly loaded thin shells . . . . .	73
2.2.1 Pressurized thin-walled cylinder . . . . .	73
2.2.2 Pressurized thin-walled sphere . . . . .	81
2.2.3 Thin rotating ring or cylinder . . . . .	84
2.3 Flexible cables . . . . .	86
2.3.1 Simplified analysis for cables with small dip . . . . .	86
Problems . . . . .	96
<b>3 Relationships between Stress and Strain . . . . .</b>	<b>103</b>
3.1 Hydrostatic stress and volumetric strain . . . . .	103
3.2 Elastic stress-strain equations . . . . .	106
3.2.1 Normal loading . . . . .	106
3.2.2 Shear loading . . . . .	112
3.2.3 Hydrostatic loading . . . . .	112
3.2.4 Relationships between the elastic constants . . . . .	113
3.2.5 Thermal strains . . . . .	116
3.3 Other stress-strain relationships . . . . .	120
3.4 Deformations of statically determinate systems . . . . .	122
3.4.1 Pin-jointed structures . . . . .	122
3.4.2 Pressurized thin-walled cylinder . . . . .	126
3.4.3 Pressurized thin-walled sphere . . . . .	131
Problems . . . . .	135
<b>4 Statically Indeterminate Systems . . . . .</b>	<b>139</b>
4.1 Pin-jointed structures . . . . .	139
4.1.1 Finite element analysis . . . . .	140
4.1.2 Computer program . . . . .	149

4.1.3 Practical applications . . . . .	152
4.1.4 Design of pin-jointed structures . . . . .	163
4.2 Other statically indeterminate systems . . . . .	164
4.2.1 Example problems . . . . .	164
4.2.2 Liquid-filled thin-walled vessels . . . . .	173
4.2.3 Resisted thermal expansion . . . . .	176
Problems . . . . .	183
<b>5 Bending of Beams: Moments, Forces, and Stresses . . . . .</b>	<b>193</b>
5.1 Some practical examples of beams . . . . .	193
5.1.1 Types of supports for beams . . . . .	195
5.1.2 Types of loads on beams . . . . .	199
5.2 Shear forces and bending moments in beams . . . . .	202
5.2.1 Definition of shear force and bending moment . . . . .	202
5.2.2 Relationships between distributed lateral force, shear force, and bending moment . . . . .	213
5.2.3 Computer method for shear force and bending moment distributions . . . . .	231
5.3 Stresses due to bending . . . . .	247
5.3.1 Normal stresses due to bending . . . . .	247
5.3.2 Shear stresses due to bending . . . . .	256
5.3.3 Beams of various cross sections . . . . .	262
5.3.4 Unsymmetrical bending . . . . .	271
5.3.5 Reinforcement of beams . . . . .	274
5.3.6 Composite beams . . . . .	278
5.3.7 Bending of initially curved beams . . . . .	288
5.4 Combined bending and axial loads . . . . .	290
Problems . . . . .	296

<b>6 Bending of Beams: Deflections . . . . .</b>	<b>309</b>
6.1 Relationship between curvature and bending moment . . . . .	310
6.2 Deflection of statically determinate beams . . . . .	313
6.2.1 Solutions for some simple cases . . . . .	313
6.2.2 Use of step functions . . . . .	323
6.2.3 Solution by superposition . . . . .	336
6.2.4 Beams of varying cross section . . . . .	338
6.3 Deflection of statically indeterminate beams . . . . .	341
6.4 Computer method for beam deflections . . . . .	351
6.4.1 Finite element analysis . . . . .	351
6.4.2 Computer program . . . . .	359
6.4.3 Practical applications . . . . .	363
Problems . . . . .	372
<b>7 Torsion . . . . .</b>	<b>379</b>
7.1 Torsion of shafts . . . . .	380
7.1.1 Torsion of thin-walled cylinders . . . . .	380
7.1.2 Torsion of solid circular shafts . . . . .	384
7.1.3 Torsion of hollow circular shafts . . . . .	390
7.1.4 Nonuniform circular shafts . . . . .	393
7.1.5 Shafts of noncircular cross section . . . . .	397
7.2 Statically determinate torsion problems . . . . .	397
7.3 Statically indeterminate torsion problems . . . . .	403
7.4 Combined bending and torsion . . . . .	410
Problems . . . . .	413
<b>8 Instability and the Buckling of Struts and Columns . . . . .</b>	<b>421</b>
8.1 Stable, neutral, and unstable equilibrium . . . . .	423

8.2 Buckling of pin-ended struts . . . . .	428
8.2.1 The perfect pin-ended strut . . . . .	428
8.2.2 Eccentrically loaded struts . . . . .	432
8.2.3 Initially curved struts . . . . .	437
8.2.4 Effects of lateral loading . . . . .	439
8.3 Struts and columns with other end conditions . . . . .	442
8.3.1 Column with ends fixed and free . . . . .	443
8.3.2 Column with both ends fixed . . . . .	445
8.3.3 Column with ends fixed and pinned . . . . .	447
8.3.4 More general cases of column buckling . . . . .	450
8.3.5 Failure of real struts and columns . . . . .	453
Problems . . . . .	458
<b>9 Transformations of Stress and Strain . . . . .</b>	<b>465</b>
9.1 Transformation of stress . . . . .	467
9.1.1 Notation for stresses . . . . .	467
9.1.2 Plane stress . . . . .	470
9.1.3 Principal stresses and maximum shear stresses . . . . .	476
9.1.4 Mohr's circle for plane stress . . . . .	482
9.1.5 Principal stresses and maximum shear stresses in a three-dimensional state of stress . . . . .	485
9.2 Transformation of strain . . . . .	489
9.2.1 Notation for strains . . . . .	489
9.2.2 Plane strain . . . . .	491
9.2.3 Principal strains and maximum shear strains . . . . .	496
9.2.4 Relationship between Young's modulus and shear modulus . . . . .	497
9.2.5 Mohr's circle for plane strain . . . . .	499
9.2.6 Use of strain gages . . . . .	500
9.3 Computer method for stresses and strains at a point . . . . .	506

9.4 Yield and fracture criteria . . . . .	508
9.4.1 Yield criteria for ductile materials . . . . .	509
9.4.2 Failure criteria for brittle materials . . . . .	514
9.4.3 Examples . . . . .	516
Problems . . . . .	521
<b>10 Equilibrium and Compatibility Equations: Beams and Thick-Walled Cylinders . . . . .</b>	<b>529</b>
10.1 Stress equilibrium equations . . . . .	529
10.1.1 Equilibrium equations in Cartesian coordinates . . . . .	529
10.1.2 Equilibrium equation in polar coordinates for axial symmetry . .	531
10.2 Strain compatibility equations . . . . .	533
10.2.1 Definitions of strains in terms of displacements . . . . .	534
10.2.2 Compatibility equation in Cartesian coordinates . . . . .	537
10.2.3 Compatibility equation in polar coordinates for axial symmetry .	538
10.3 Application to beam bending . . . . .	538
10.3.1 Pure bending . . . . .	538
10.3.2 Cantilever with a concentrated end force . . . . .	543
10.3.3 Simply supported beam with a distributed force . . . . .	549
10.4 Application to thick-walled cylinders and disks . . . . .	554
10.4.1 Internally pressurized thick-walled cylinder . . . . .	555
10.4.2 Compound cylinders . . . . .	562
10.4.3 Rotating disks . . . . .	572
Problems . . . . .	577
<b>11 Energy Methods of Structural Mechanics . . . . .</b>	<b>583</b>
11.1 Introduction . . . . .	583
11.2 Concepts of work and energy . . . . .	584
11.3 Strain energy and complementary strain energy . . . . .	588

11.4 Virtual work and complementary virtual work . . . . .	598
11.4.1 Preliminary comments . . . . .	598
11.4.2 Internal and external virtual work . . . . .	599
11.5 Variational operator and fundamental lemma . . . . .	604
11.6 The principle of virtual displacements and its special cases . . . . .	607
11.6.1 The principle of virtual displacements . . . . .	607
11.6.2 The principle of minimum total potential energy . . . . .	609
11.6.3 Castigliano's Theorem I . . . . .	612
11.7 The principle of virtual forces and its special cases . . . . .	620
11.7.1 The principle of complementary virtual work . . . . .	620
11.7.2 The principle of minimum complementary energy and Castigliano's Theorem II . . . . .	622
Problems . . . . .	632
<b>Appendices . . . . .</b>	<b>637</b>
A Properties of Materials . . . . .	637
A.1 Density, elastic, and thermal properties . . . . .	637
A.2 Strength properties . . . . .	639
A.3 Conversion factors between SI metric and US customary units . . . . .	640
B Moments of Area . . . . .	640
B.1 First moment of area . . . . .	640
B.2 Second moment of area . . . . .	645
B.3 Parallel axis theorem . . . . .	646
B.4 Perpendicular axis theorem . . . . .	648
B.5 Properties of some simple shapes . . . . .	649
C Deflections and Slopes for Some Common Cases of the Bending of Beams . . . . .	649
C.1 Cantilevers . . . . .	651
C.2 Simply supported beams . . . . .	652
C.3 Built-in beams . . . . .	653
<b>Answers to Even-Numbered Problems . . . . .</b>	<b>655</b>
<b>Index . . . . .</b>	<b>665</b>
