Contents

Preface xi

1 **Introduction** 1
Seungdeog Choi
References 8

2 **Faults in Induction and Synchronous Motors** 9
Bilal Akin and Mina M. Rahimian
2.1 Introduction of Induction Motor Fault 9
2.1.1 Bearing Faults 9
2.1.2 Stator Faults 11
2.1.3 Broken Rotor Bar Fault 13
2.1.4 Eccentricity Fault 15
2.2 Introduction of Synchronous Motor Fault Diagnosis 16
2.2.1 Damper Winding Fault 17
2.2.2 Demagnetization Fault in Permanent Magnet Synchronous Machines (PMSMs) 18
2.2.3 Eccentricity Fault 19
2.2.4 Stator Inter-Turn Fault 20
2.2.5 Rotor Inter-Turn Fault 21
2.2.6 Bearing Fault 22
References 23

3 **Modeling of Electric Machines Using Winding and Modified Winding Function Approaches** 27
Subhasis Nandi
3.1 Introduction 27
3.2 Winding and Modified Winding Function Approaches (WFA and MWFA) 28
3.3 Inductance Calculations Using WFA and MWFA 33
3.4 Validation of Inductance Calculations Using WFA and MWFA 39
References 45

4 Modeling of Electric Machines Using Magnetic Equivalent Circuit Method 47
Homayoun Meshgin-Kelk

4.1 Introduction 47
4.2 Indirect Application of Magnetic Equivalent Circuit for Analysis of Salient Pole Synchronous Machines 52
4.2.1 Magnetic Equivalent Circuit of a Salient Pole Synchronous Machine 53
4.2.2 Inductance Relations of a Salient Pole Synchronous Machine 55
4.2.3 Calculation of Inductances for a Salient Pole Synchronous Machine 58
4.2.4 Experimental Measurement of Inductances of a Salient Pole Synchronous Machine 63
4.3 Indirect Application of Magnetic Equivalent Circuit for Analysis of Induction Machines 66
4.3.1 A Simplified Magnetic Equivalent Circuit of Induction Machines 66
4.3.2 Inductance Relations of Induction Machines 68
4.3.3 Calculation of Inductance of an Induction Machine 70
4.4 Direct Application of Magnetic Equivalent Circuit Considering Nonlinear Magnetic Characteristic for Machine Analysis 73
Appendix A: Induction Machine Parameters 77
Appendix B: Node Permeance Matrices 78
References 79

5 Analysis of Faulty Induction Motors Using Finite Element Method 81
Bashir Mahdi Ebrahimi

5.1 Introduction 81
5.2 Geometrical Modeling of Faulty Induction Motors Using Time-Stepping Finite Element Method (TSFEM) 82
5.3 Coupling of Electrical Circuits and Finite Element Area 83
5.4 Modeling Internal Faults Using Finite Element Method 85
5.4.1 Modeling Broken Bar Fault 85
5.4.2 Modeling Eccentricity Fault 87
5.4.2.1 Static Eccentricity 87
5.4.2.2 Dynamic Eccentricity 89
5.4.2.3 Mixed Eccentricity 90
5.5 Impact of Magnetic Saturation on Accurate Fault Detection in Induction Motors 91

5.5.1 Analysis of Air-Gap Magnetic Flux Density in Healthy and Faulty Induction Motor 94
5.5.1.1 Linear Magnetization Characteristic 94
5.5.1.2 Nonlinear Magnetization Characteristic 95
References 96

6 Fault Diagnosis of Electric Machines Using Techniques Based on Frequency Domain 99
Subhasis Nandi

6.1 Introduction 99
6.2 Some Definitions and Examples Related to Signal Processing 100
6.2.1 Continuous versus Discrete or Digital or Sampled Signal 100
6.2.2 Continuous, Discrete Fourier Transforms, and Nonparametric Power Spectrum Estimation 101
6.2.3 Parametric Power Spectrum Estimation 105
6.2.4 Power Spectrum Estimation Using Higher-Order Spectra (HOS) 107
6.2.5 Power Spectrum Estimation Using Swept Sine Measurements or Digital Frequency Locked Loop Technique (DFLL) 110
6.3 Diagnosis of Machine Faults Using Frequency-Domain-Based Techniques 111
6.3.1 Detection of Motor Bearing Faults 111
6.3.1.1 Mechanical Vibration Frequency Analysis to Detect Bearing Faults 111
6.3.1.2 Line Current Frequency Analysis to Detect Bearing Faults 115
6.3.2 Detection of Stator Faults 116
6.3.2.1 Detection of Stator Faults Using External Flux Sensors 116
6.3.2.2 Detection of Stator Faults Using Line Current Harmonics 117
6.3.2.3 Detection of Stator Faults Using Terminal Voltage Harmonics at Switch-Off 119
6.3.2.4 Detection of Stator Faults Using Field Current and Rotor Search Coil Harmonics in Synchronous Machines 121
6.3.2.5 Detection of Stator Faults Using Rotor Current and Search Coil Voltages Harmonics in Wound Rotor Induction Machines 124
6.3.3 Detection of Rotor Faults 129

6.3.3.1 Detection of Rotor Faults in Stator Line Current, Speed, Torque, and Power 130
6.3.3.2 Detection of Rotor Faults in External and Internal Search Coil 134
6.3.3.3 Detection of Rotor Faults Using Terminal Voltage Harmonics at Switch-Off 134
6.3.3.4 Detection of Rotor Faults at Start-Up 134
6.3.3.5 Detection of Rotor Faults in Presence of Interbar Current Using Axial Vibration Signals 135
6.3.4 Detection of Eccentricity Faults 136
6.3.4.1 Detection of Eccentricity Faults Using Line Current Signal Spectra 136
6.3.4.2 Detection of Eccentricity Faults Based on Nameplate Parameters 142
6.3.4.3 Detection of Eccentricity Faults Using Mechanical Vibration Signal Spectra 147
6.3.4.4 Detection of Inclined Eccentricity Faults 147
6.3.5 Detection of Faults in Inverter-Fed Induction Machines ...148
References 149

7 Fault Diagnosis of Electric Machines Using Model-Based Techniques 155
Subhasis Nandi

7.1 Introduction 155
7.2 Model of Healthy Three-Phase Squirrel-Cage Induction Motor ... 158
7.3 Model of Three-Phase Squirrel-Cage Induction Motor with Stator Inter-Turn Faults 165
7.3.1 Model without Saturation 165
7.3.2 Model with Saturation 169
7.4 Model of Squirrel-Cage Induction Motor with Incipient Broken Rotor Bar and End-Ring Faults 175
7.5 Model of Squirrel-Cage Induction Motors with Eccentricity Faults 177
7.6 Model of a Synchronous Reluctance Motor with Stator Fault 179
7.7 Model of a Salient Pole Synchronous Motor with Dynamic Eccentricity Faults 181
References 183

8 Application of Pattern Recognition to Fault Diagnosis 185
Masoud Hajiaghajani

8.1 Introduction 185
8.2 Bayesian Theory and Classifier Design 186
8.3 Simplified Form for a Normal Distribution 189

8.4 Feature Extraction for Our Fault Diagnosis System 190
8.5 Classifier Training 192
8.6 Implementation 194
References 198

9 Implementation of Motor Current Signature Analysis Fault Diagnosis Based on Digital Signal Processors 199
Seungdeog Choi and Bilal Akin

9.1 Introduction 199
9.1.1 Cross-Correlation Scheme Derived from Optimal Detector in Additive White Gaussian Noise (AWGN) Channel 200
9.2 Reference Frame Theory 201
9.2.1 Reference Frame Theory for Condition Monitoring 202
9.2.2 (Fault) Harmonic Analysis of Multiphase Systems 202
9.2.3 On-Line Fault Detection Results 204
9.2.3.1 v/f Controlled Inverter-Fed Motor Line Current Analysis 204
9.2.3.2 Field-Oriented Control Inverter-Fed Motor Line Current Analysis 206
9.2.3.3 Instantaneous Fault Monitoring in Time-Frequency Domain and Transient Analysis 206
9.3 Phase-Sensitive Detection-Based Fault Diagnosis 210
9.3.1 Introduction 210
9.3.2 Phase-Sensitive Detection 210
9.3.3 On-Line Experimental Results 212
References 218

10 Implementation of Fault Diagnosis in Hybrid Electric Vehicles Based on Reference Frame Theory 221
Bilal Akin

10.1 Introduction 221
10.2 On-Board Fault Diagnosis (OBD) for Hybrid Electric Vehicles (HEVs) 221
10.3 Drive Cycle Analysis for OBD 224
10.4 Rotor Asymmetry Detection at Zero Speed 226
References 233

11 Robust Signal Processing Techniques for the Implementation of Motor Current Signature Analysis Diagnosis Based on Digital Signal Processors 235
Seungdeog Choi

11.1 Introduction 235
11.1.1 Coherent Detection 236

11.1.2 Noncoherent Detection (Phase Ambiguity Compensation) 237
11.1.3 Fault Frequency Offset Compensation 237
11.2 Decision-Making Scheme 240
11.2.1 Adaptive Threshold Design (Noise Ambiguity Compensation) 240
11.2.2 Q-Function 242
11.2.3 Noise Estimation 243
11.3 Simulation and Experimental Result 244
11.3.1 Modeled MATLAB Simulation Result 244
11.3.2 Off-Line Experiments 245
11.3.2.1 Off-Line Results for Eccentricity 246
11.3.2.2 Off-Line Results for Broken Rotor Bar 247
11.3.3 On-Line Experimental Results 248
References 251
