List of contributors, xi
Preface, xiii
Acknowledgements, xiv

I Global contexts, 1

1 Introduction, 3

Sarah E. Metcalfe and David J. Nash

1.1 Why the tropics matter, 3

- 1.1.1 Defining the tropics, 3
- 1.1.2 Importance of the tropics, 4

1.2 Development of ideas, 8

- 1.2.1 Early ideas about tropical environmental change, 8
- 1.2.2 The twentieth century revolution, 9
- 1.2.3 Advances in modelling, 12

1.3 Establishment of the tropical climate system, 13

1.4 Drivers of tropical environmental change, 17

1.5 The tropics as drivers of change, 20

- 1.5.1 The tropics and greenhouse gas concentrations, 20
- 1.5.2 Impacts of low latitude volcanic eruptions, 22
- 1.5.3 Dust emissions from the tropics and subtropics, 23

1.6 Extra-tropical forcing, 24

1.7 Organisation of the volume, 24

Acknowledgements, 25

References, 25

2 Contemporary climate and circulation of the tropics, 34

Stefan Hastenrath

2.1 Introduction, 34

2.2 Diurnal and local processes, 34

2.3 Planetary context, 35

2.4 Regional circulation systems, 36

- 2.4.1 Jet streams, 36
- 2.4.2 Subtropical highs and trade winds, 37
- 2.4.3 Equatorial trough zone, 37
- 2.4.4 Monsoons, 38
- 2.4.5 Equatorial zonal circulations, 38

- 2.5 Climatic variability, 39
 - 2.5.1 Southern Oscillation and El Niño, 39
 - 2.5.2 Indian Monsoon, 40
 - 2.5.3 Northeast Brazil, 41
 - 2.5.4 Sahel, 41
 - 2.5.5 Timescales of variability, 42
- 2.6 Concluding remarks, 42
- References, 42

II Regional environmental change, 45

3 Tropical oceans, 47

Jan-Berend W. Stuut, Matthias Prange, Ute Merkel and Silke Steph

- 3.1 Tropical oceans in the global climate system, 47
 - 3.1.1 Modern climatology, 47
 - 3.1.2 El Niño–Southern Oscillation and its relatives, 50
 - 3.1.3 Solar and volcanic radiative forcing of tropical oceans, 51
 - 3.1.4 Tropical oceans and monsoons, 53
 - 3.1.5 The tropical oceans as part of the global conveyor belt, 53
- 3.2 Reconstructing past ocean conditions, 55
 - 3.2.1 Proxies for SST and SSS, 55
 - 3.2.2 Reconstructing continental climate using marine archives, 57
- 3.3 Tropical oceans throughout the Quaternary, 57
 - 3.3.1 Glacial–interglacial cycles, 57
 - 3.3.2 Early Quaternary (the ‘41-kyr world’), 57
 - 3.3.3 Mid-Pleistocene Transition, 58
 - 3.3.4 Late Quaternary (the ‘100-kyr world’), 60
- 3.4 The past 20 000 years, 60
 - 3.4.1 The Last Glacial Maximum, 60
 - 3.4.2 Glacial termination: an active role for the tropics?, 61
 - 3.4.3 History of the equatorial Pacific and the state of ENSO, 65
 - 3.4.4 The Holocene, 66
- 3.5 Outlook, 68
- References, 69

4 Africa, 79

David J. Nash and Michael E. Meadows

- 4.1 Introduction, 79
- 4.2 Potential climate forcing factors, 85
- 4.3 Mediterranean North Africa, 88
 - 4.3.1 Contemporary climate and sources of palaeoenvironmental information, 88
 - 4.3.2 Longer records, 88
 - 4.3.3 The Last Glacial Maximum, 89
 - 4.3.4 The last glacial–interglacial transition, 92
 - 4.3.5 The Holocene, 93
- 4.4 The Sahara and the Sahel, 94
 - 4.4.1 Contemporary climate and sources of palaeoenvironmental information, 94

- 4.4.2 Longer records, 95
- 4.4.3 The Last Glacial Maximum, 96
- 4.4.4 The last glacial–interglacial transition, 97
- 4.4.5 The Holocene, 99
- 4.5 Equatorial Africa, 103
 - 4.5.1 Contemporary climate and sources of palaeoenvironmental information, 103
 - 4.5.2 Longer records, 104
 - 4.5.3 The Last Glacial Maximum, 107
 - 4.5.4 The last glacial–interglacial transition, 109
 - 4.5.5 The Holocene, 110
- 4.6 Southern Africa, 113
 - 4.6.1 Contemporary climate and sources of palaeoenvironmental information, 113
 - 4.6.2 Longer records, 113
 - 4.6.3 The Last Glacial Maximum, 118
 - 4.6.4 The last glacial–interglacial transition, 121
 - 4.6.5 The Holocene, 122
- 4.7 Synthesis, 127
- 4.8 Directions for future research, 129
- References, 129
- 5 India, Arabia and adjacent regions, 151**
Ashok K. Singhvi, Nilesh Bhatt, Ken W. Glennie and Pradeep Srivastava
 - 5.1 Introduction, 151
 - 5.2 Quaternary of India and Tibet, 153
 - 5.2.1 Arid and semi-arid regions, 154
 - 5.2.2 Aeolian sands, 154
 - 5.2.3 Aeolian dust (loess deposits), 159
 - 5.2.4 Volcanic ash, 159
 - 5.2.5 Lacustrine records, 161
 - 5.2.6 Peat deposits, 166
 - 5.2.7 Calcretes, 167
 - 5.2.8 Coastal records, 167
 - 5.2.9 Fluvial records, 171
 - 5.2.10 Cave deposits, 176
 - 5.3 Quaternary of the Arabian Sea and Bay of Bengal, 176
 - 5.4 Quaternary of Arabia and the Middle East, 177
 - 5.4.1 Fluvial (wadi) systems, 179
 - 5.4.2 Lacustrine (and sabkha) records, 180
 - 5.4.3 Cave deposits, 182
 - 5.4.4 Aeolian sands, 183
 - 5.4.5 Gypsum in dunes, 187
 - 5.4.6 Late Quaternary Persian (Arabian) Gulf, 188
 - 5.4.7 Dating aeolian sediment supply, 189
 - 5.4.8 Climatic optimum and modern Arabian civilisation, 191
 - 5.4.9 Summary of environmental changes in Arabia and the Middle East, 191

- 5.5 Conclusions, 192
- Acknowledgements, 196
- References, 196
- 6** China and Southeast Asia, 207
 - Dan Penny*
 - 6.1 The South and Southeast Asian region as a component of the Earth system, 207
 - 6.2 Setting the stage for the Quaternary: environmental context and controls, 211
 - 6.3 Regional syntheses, 214
 - 6.3.1 China, 214
 - 6.3.2 Indochina, 221
 - 6.3.3 Sundaland and Wallacea, 225
 - 6.4 The Asian tropics during the Quaternary: driver of planetary change?, 229
 - References, 230
- 7** Australia and the southwest Pacific, 236
 - Peter Kershaw and Sander van der Kaars*
 - 7.1 Introduction, 236
 - 7.2 Northeastern Australia, 240
 - 7.2.1 Orbital timescale, 240
 - 7.2.2 Suborbital timescale, 244
 - 7.2.3 Termination 1 and the Holocene, 244
 - 7.3 Northern Australia, 245
 - 7.3.1 Orbital timescale, 245
 - 7.3.2 Termination 1 and the Holocene, 246
 - 7.4 Northwestern Australia, 247
 - 7.4.1 Orbital timescale, 247
 - 7.4.2 Termination 1 and the Holocene, 249
 - 7.5 Western Australia, 249
 - 7.5.1 Orbital timescale, 249
 - 7.5.2 Termination 1 and the Holocene, 251
 - 7.6 Central Australia, 251
 - 7.6.1 Orbital timescale, 251
 - 7.6.2 Termination 1 and the Holocene, 253
 - 7.7 Southwest Pacific Islands, 253
 - 7.8 General discussion and conclusions, 254
 - 7.8.1 Early Quaternary, 254
 - 7.8.2 Late Quaternary cyclicity and abrupt events, 255
 - 7.8.3 Late Quaternary climate alterations, 256
 - Acknowledgements, 258
 - References, 258
- 8** Latin America and the Caribbean, 263
 - Mark B. Bush and Sarah E. Metcalfe*
 - 8.1 Introduction, 263
 - 8.2 Precursor to the Quaternary, 264
 - 8.2.1 Climatic consequences of closure of the Isthmus of Panama, 267
 - 8.2.2 Biotic consequences of closure of the Isthmus of Panama, 267

- 8.3 Climate mechanisms, 267
 - 8.3.1 Modern climatology, 267
 - 8.3.2 The forcing of Neotropical climates, 270
- 8.4 Long term climate forcings and cycles, 271
 - 8.4.1 Eccentricity, 271
 - 8.4.2 Precessional cycles and precipitation patterns, 272
 - 8.4.3 Precession as a mixed signal, 273
- 8.5 Records of climate change, 274
 - 8.5.1 Glacial advance and the LGM, 274
 - 8.5.2 Glacial cooling, 276
 - 8.5.3 Glacial-age precipitation, 278
 - 8.5.4 The status of the refugial hypothesis of tropical diversity, 284
 - 8.5.5 The last deglaciation, 286
 - 8.5.6 The early-mid Holocene, 287
 - 8.5.7 Late Holocene oscillations, 289
- 8.6 Other climate forcings, 289
 - 8.6.1 Millennial-scale oscillations, 289
 - 8.6.2 Solar cycles, 291
 - 8.6.3 El Niño–Southern Oscillation, 292
- 8.7 El Niño records, 292
 - 8.7.1 Archaeology, 292
 - 8.7.2 Historical records, 293
 - 8.7.3 Tree ring records, 293
 - 8.7.4 Corals, 294
 - 8.7.5 Sedimentary records, 295
- 8.8 Climate and societies, 296
 - 8.8.1 Early agriculture, 296
 - 8.8.2 Cultural collapse, 297
- 8.9 Conclusions, 298
- Acknowledgements, 301
- References, 301

III Global syntheses, 313

- 9** Modelling of tropical environments during the Quaternary, 315
Zhengyu Liu and Pascale Braconnot
 - 9.1 Introduction, 315
 - 9.2 Tropical climate in the Holocene: response to orbital forcing, 316
 - 9.2.1 Orbital forcing, 316
 - 9.2.2 Monsoon response, 317
 - 9.2.3 SST response and oceanic feedback, 319
 - 9.2.4 Precession forcing and obliquity forcing, 324
 - 9.2.5 Ecosystem response and feedback, 330
 - 9.3 Tropical climate at the LGM: the roles of GHGs and ice sheet forcing, 333
 - 9.3.1 Greenhouse gases and ice sheet forcing, 333
 - 9.3.2 Temperature response and climate sensitivity, 333
 - 9.3.3 Monsoon and hydrological response, 338
 - 9.3.4 Ecosystem response and feedbacks, 339

Contents

- 9.4 Tropical climate variability, 339
 - 9.4.1 ENSO and ocean–atmosphere interaction, 340
 - 9.4.2 Abrupt change of monsoon climate, 343
 - 9.4.3 Tropical variability and its interaction with high-latitude variability, 344
- 9.5 Summary and further discussion, 349
 - 9.5.1 Summary, 349
 - 9.5.2 Other issues in Quaternary tropical climate modelling, 350
 - 9.5.3 Climate models of intermediate complexity, 350
 - 9.5.4 Perspective of Earth system modelling of past climate, 351
- References, 352
- 10** Historical environmental change in the tropics, 360
 - Georgina H. Endfield and Robert B. Marks*
 - 10.1 Introduction, 360
 - 10.2 Climate change and society in the tropics in the last 1000 years, 361
 - 10.2.1 Climate variability and harvest history in China, 365
 - 10.2.2 Climate and crisis in colonial Mexico, 370
 - 10.3 Exploring anthropogenic impacts in the tropics, 375
 - 10.3.1 Deforesting China, 378
 - 10.3.2 Exploring pre- and post-conquest land use changes in central Mexico, 380
 - 10.4 Recent and future environmental changes in the ‘vulnerable’ tropics, 382
 - References, 384
- 11** Past environmental changes, future environmental challenges, 392
 - David J. Nash and Sarah E. Metcalfe*
 - 11.1 Patterns of tropical environmental change, 392
 - 11.1.1 Last Interglacial, 392
 - 11.1.2 Last Glacial Maximum, 394
 - 11.1.3 The last deglaciation or last glacial–interglacial transition, 396
 - 11.1.4 The Holocene, 398
 - 11.2 Forcings, 401
 - 11.3 Future change in the tropics, 402
 - 11.3.1 Climate responses, 402
 - 11.3.2 Water resources, 404
 - 11.3.3 Biodiversity, 406
 - 11.4 The tropics as drivers of change, 406
 - 11.5 Conclusions, 408
 - References, 409

Index, 412

Colour plate pages fall between pp. 210 and 211
