

Contents

Preface	xvii
1. Earth Systems	1
Earth as a Planetary System	1
Structure of Earth	3
Plate Tectonics	5
Is the Earth Unique?	7
Interacting Earth Systems	8
Further Reading	10
2. The Crust	11
Introduction	11
Seismic Crustal Structure	11
The Moho	11
Crustal Layers	13
Complexities in the Lower Continental Crust	14
Crustal Types	17
Oceanic Crust	17
Seismic Features	17
Ocean Ridges	18
Ocean Basins	19
Volcanic Islands	20
Trenches	20
Back-Arc Basins	20
Transitional Crust	20
Oceanic Plateaus	20
Arcs	21
Continental Rifts	22
Inland-Sea Basins	23
Continental Crust	23
Shields and Platforms	23
Orogens	24
Continent Size	25
Heat Flow	26
Heat Flow Distribution	26
Heat Production and Heat Flow in the Continents	27
Age Dependence of Heat Flow	30

Exhumation and Cratonization	32
Unraveling Pressure-Temperature-Time Histories	33
Some Typical P-T-t Paths	34
Cratonization	35
Processes in the Continental Crust	37
Rheology	37
The Role of Fluids and Crustal Melts	38
Crustal Composition	39
Approaches	39
Seismic Wave Velocities	40
Seismic Reflections in the Lower Continental Crust	42
Sampling of Precambrian Shields	44
Use of Fine-Grained Detrital Sediments	44
Exhumed Crustal Blocks	45
Crustal Xenoliths	47
An Estimate of Crustal Composition	48
Continental Crust	48
Oceanic Crust	50
Complementary Compositions of Continental and Oceanic Crust	51
Crustal Provinces and Terranes	51
Crustal Province and Terrane Boundaries	55
The United Plates of America	57
Further Reading	57
3. Tectonic Settings	59
Introduction	59
Ocean Ridges	60
Ocean Ridge Basalts	60
Ophiolites	61
General Features	61
Tectonic Setting and Emplacement of Ophiolites	63
Formation of Ophiolites	65
Precambrian Ophiolites	66
Tectonic Settings Related to Mantle Plumes	66
Large Igneous Provinces	66
Oceanic Plateaus and Aseismic Ridges	67
Rifted Continental Margins	68
Continental Flood Basalts	70
Hotspot Volcanic Islands	71
Giant Mafic Dyke Swarms	73
Continental Rifts	75
General Features	75
Rock Assemblages	77
Rift Development and Evolution	78

Cratons and Passive Margins	80
Arc Systems	81
Subduction-Related Rock Assemblages	81
Trenches	81
Accretionary Prisms	82
Forearc Basins	83
Arcs	84
Back-Arc Basins	84
Remnant Arcs	85
Retroarc Foreland Basins	85
Arc Processes	86
High-Pressure Metamorphism	89
Igneous Rocks	89
Compositional Variation of Arc Magmas	91
Orogens	92
Three Types of Orogens	92
Collisional Orogens	93
Accretionary Orogens	95
Intracratonic Orogens	95
Orogenic Rock Assemblages	96
Tectonic Elements of Collisional Orogens	97
Sutures	99
Foreland and Hinterland Basins	99
The Himalayas	100
Uncertain Tectonic Settings	101
Anorogenic Granites	101
General Features	101
Associated Anorthosites	103
Tectonic Setting	103
Archean Greenstones	104
General Features	104
Greenstone Volcanics	106
Greenstone Sediments	108
Granitoids	110
Mineral and Energy Deposits	111
Mineral Deposits	111
Ocean Ridges	111
Arc Systems	113
Orogens	114
Continental Rifts	114
Cratons and Passive Margins	114
Archean Greenstones	115
Energy Deposits	115
Plate Tectonics with Time	117
Further Reading	118

4. The Mantle	121
Introduction	121
Seismic Structure of the Mantle	121
Upper Mantle	121
Lower Mantle	123
Mantle Upwellings and Geoid Anomalies	123
Temperature Distribution in the Mantle	126
The Lithosphere	130
Oceanic Lithosphere	131
Continental Lithosphere	132
Composition	132
Seismic Velocity Constraints	132
Mantle Xenoliths	134
Chemical Composition	136
Thickness	139
Subductability	141
Age of Subcontinental Lithosphere	141
The Low-Velocity Zone	144
The Transition Zone	145
The 410-km Discontinuity	145
The 520-km Discontinuity	147
The 660-km Discontinuity	148
The Lower Mantle	149
General Features	149
Descending Slabs	150
The D'' Layer	152
Spin Transitions	155
Water in the Mantle	155
Plate Driving Forces	156
Mantle Plumes	157
Hotspots	158
Plume Characteristics	161
Tracking Plume Tails	163
Plume Sources	164
Mantle Geochemical Components	165
Identifying Mantle Components	166
Summary	166
Depleted Mantle	166
HIMU	168
Enriched Mantle	169
Helium Isotopes	170
Archean Geochemical Components	171
Mixing Regimes in the Mantle	171
Overview	173
Convection in the Mantle	174
The Nature of Convection	174
Passive Ocean Ridges	175

Layered Convection Model	176
Toward a Convection Model for Earth	178
Further Reading	180
5. The Core	181
Introduction	181
Core Temperature	182
The Inner Core	182
Anisotropy of the Inner Core	182
Inner Core Rotation	185
Composition of the Core	186
Age of the Core	188
Generation of Earth's Magnetic Field	189
The Geodynamo	189
Fluid Motions in the Outer Core	189
Fueling the Geodynamo	191
How the Geodynamo Works	192
What Causes Magnetic Reversals?	193
Origin of the Core	194
Segregation of Iron in the Mantle	194
Siderophile Element Distribution in the Mantle	195
Growth and Evolution of the Core	196
What the Future Holds	196
Further Reading	197
6. Earth's Atmosphere, Hydrosphere, and Biosphere	199
The Modern Atmosphere	199
The Primitive Atmosphere	201
The Post-Collision Atmosphere	203
Composition of the Early Atmosphere	203
Growth Rate of the Atmosphere	204
The Faint Young Sun Paradox	205
The Precambrian Atmosphere	206
The Carbon Cycle	208
The Carbon Isotope Record	209
General Features	209
The 2200-Ma Carbon Isotope Excursion	211
The Sulfur Isotope Record	212
Phanerozoic Atmospheric History	214
The Hydrosphere	216
Sea Level	217
The Early Oceans	219
Changes in the Composition of Seawater with Time	220
Marine Carbonates	220
The Dolomite-Limestone Problem	222
Evaporites	223

- Banded Iron Formation 224
- The Biochemical Record of Sulfur 224
- Sedimentary Phosphates 225
- The Temperature of Seawater 226
- Ocean Volume through Time 229
- Euxinia in the Proterozoic Oceans 229
- Paleoclimates** 231
- Paleoclimatic Indicators 231
- Long-Term Paleoclimatic Driving Forces 233
- Glaciation 233
- Precambrian Climatic Regimes 235
- Phanerozoic Climatic Regimes 238
- Glaciation 238
- The Biosphere** 240
- Appearance of Eukaryotes 240
- Origin of Metazoans 242
- Stromatolites 242
- Neoproterozoic Multicellular Organisms 244
- The Cambrian Explosion 244
- Evolution of Phanerozoic Life-Forms 247
- Biological Benchmarks 249
- Mass Extinctions** 250
- Episodic Distributions 251
- Glaciation and Mass Extinction 253
- Impact-Related Extinctions 254
- Environmental Changes 254
- Earth-Crossing Asteroids 256
- Comets 257
- The Triassic Extinction 257
- Impact and a 580-Ma Extinction 258
- Epilogue 258
- Further Reading 259

7. Crustal and Mantle Evolution 261

- Introduction** 261
- The Hadean** 261
- Extinct Radioactivity 261
- Hadean Zircons 263
- Origin of the First Crust 266
- Composition of the Primitive Crust 267
- Felsic Models 268
- Anorthosite Models 268
- Basalt and Komatiite Models 269
- Earth's Oldest Rocks** 269
- Crustal Origin** 273
- How Continents Grow** 275

General Features	275
Growth by Mafic Underplating	276
Oceanic Plateaus and Continental Growth	277
Growth by Plate Collisions	278
Continental Growth Rates	280
The Role of Recycling	281
Delamination	283
Juvenile Crust	284
Oxygen Isotopes	285
Neodymium Isotopes	285
Hafnium Isotopes and Detrital Zircons	288
Juvenile Crust in Extensional Settings	291
Freeboard	291
Continental Growth in the Last 200 Ma	292
Toward a Continental Growth Model	293
The Approach	293
The Model	294
The 2.4- to 2.2-Ga Crustal Age Gap	295
Secular Changes in the Continental Crust	297
Major Elements	298
Rare Earth and Related Elements	298
Nickel, Cobalt, and Chromium	300
Oceanic Plateaus as Starters for Archean Continents	300
Secular Changes in the Mantle	301
Tracking Mantle Geochemical Components into the Archean	302
Mantle Lithosphere Evolution	303
Continental Lithosphere	303
Oceanic Lithosphere	305
Ophiolites	305
Blueschists and Ultra-High-Pressure Metamorphic Rocks	307
Earth's Thermal History	308
Magma Oceans	309
How Hot Was the Archean Mantle?	310
Thermal Models	314
Further Reading	316
8. The Supercontinent Cycle	317
Introduction	317
Supercontinent Reconstruction	319
Continental Collisions and the Assembly of	
Supercontinents	325
The First Supercontinent	326
Later Supercontinents	328
Nuna (Columbia)	328
Rodinia	329
Gondwana and Pangea	331

The Supercontinent Cycle	332
Episodic Ages	332
Patterns of Cyclicality	335
Relationship to Earth History	336
Mineral Deposit Age Patterns	336
Strontium Isotopes in Marine Carbonates	337
Sea Level Variations	339
Supercontinents and Evolution	340
Mantle Superplume Events	342
Superplume Events	343
Mantle Plumes and Supercontinent Breakup	344
Episodic LIP Events	349
Slab Avalanches	349
Supercontinents, Superplumes, and the Carbon Cycle	350
Supercontinent Formation	351
Supercontinent Breakup	353
Mantle Superplume Events	353
Epilogue	354
Further Reading	354
9. Great Events in Earth History	357
Introduction	357
Event 1: Origin of the Moon	358
How Rare Is the Earth–Moon System?	358
Constraints on Lunar Origin	358
The Fission Model	362
Double Planet Models	362
Capture Models	363
Giant Impactor Model	363
Early Thermal History of the Moon	366
Event 2: Origin of Life	367
The Role of Impacts	368
The RNA World	370
Hydrothermal Vents	372
Possible Site for the Origin of Life	372
Experimental and Observational Evidence	375
The First Life	375
Evidence of Early Life	376
The Origin of Photosynthesis	378
Anoxygenic Photosynthesis	378
Oxygenic Photosynthesis	379
The Tree of Life	381
The First Fossils	382
Possibility of Extraterrestrial Life	384
Event 3: The Onset of Plate Tectonics	386
Plate Tectonic Indicators	386

Global Changes at the End of the Archean	389
Decrease in Mantle Temperature	389
Komatiite Abundance	389
MgO Content of Komatiites	389
Ni/Fe Ratio in Banded Iron Formation	391
Degree of Upper Mantle Melting	391
The Growth of Cratons	392
Nb/Th Ratio and Neodymium Isotopes in Basalts	392
Changes in Granitoid Compositions	393
Oxygen Isotopes in Zircons	394
Gold Reserves	394
Thickening of the Archean Lithosphere	395
How Did Plate Tectonics Begin: Thermal Constraints	397
When Did Plate Tectonics Begin?: The Ongoing Saga	399
Conclusions	402
Event 4: The Great Oxidation Event	402
Oxygen Controls in the Atmosphere	402
Geologic Indicators of Ancient Atmospheric Oxygen Levels	404
Banded Iron Formation	404
Redbeds and Sulfates	405
Detrital Uraninite Deposits	406
Paleosols	406
Biologic Indicators	407
Molybdenum in Black Shales	408
Mass-Independent Sulfur Isotope Fractionation	408
The Growth of Atmospheric Oxygen	410
Event 5: The Snowball Earth	412
The Observational Database	413
The Snowball Model	414
Event 6: Mass Extinction at the End of the Permian	416
General Features	416
Evidence for Impact	418
LIP Volcanism	418
Shallow-Water Anoxia	419
Catastrophic Methane Release	419
Conclusions	421
Event 7: The Cretaceous Superplume Event	421
Geologic Evidence	421
The Carbon Isotope and Trace Metal Record	424
Seeking a Cause	425
A Possible Superchron-Superplume Connection	425
Event 8: Mass Extinction at the end of the Cretaceous	426
General Features	426
Seeking a Cause	427
Evidence for Impact	427
Iridium Anomalies	427
Glass Spherules	428

Soot	428
Shocked Quartz	428
Stishovite	429
Chromium Isotopes	429
LIP Volcanism	429
Chicxulub and the K/T Impact Site	431
Possibility of Multiple K/T Impacts	433
Conclusions	433
Further Reading	434
10. Comparative Planetary Evolution	437
Introduction	437
Condensation and Accretion of the Planets	438
The Solar Nebula	438
Emergence of Planets	439
Homogeneous Accretion	442
Chemical Composition of the Earth and the Moon	443
Accretion of Earth	444
The First 700 Million Years	447
Members of the Solar System	449
The Planets	449
Mercury	449
Mars	453
Crustal Dichotomy	453
Surface Features	454
Martian History	455
Venus	458
In Comparison to Earth	458
Volcanism	462
The Venusian Core	462
Crustal Plateaus	463
Thermal History	464
The Giant Planets	466
Satellites and Planetary Rings	467
General Features	467
Planetary Rings	468
The Moon	468
Rotational History of the Earth–Moon System	471
Satellite Origin	472
Comets and Other Icy Bodies	473
Asteroids	474
Meteorites	476
Chondrites	477
SNC Meteorites	478
Refractory Inclusions	478
Iron Meteorites and Parent Body Cooling Rates	478
Asteroid Sources	479

Meteorite Chronology	480
Impact Chronology of the Inner Solar System	481
Volcanism in the Solar System	482
Planetary Crusts	484
Plate Tectonics	484
Mineral Evolution	485
Evolution of the Atmospheres of Earth, Venus, and Mars	486
The Continuously Habitable Zone	488
Comparative Planetary Evolution	488
Extrasolar Planets	492
Further Reading	492
References	493
Index	559
