Contents

	Preface	ix
Part 1	**Introduction to CNC Technology**	1
1.	**Historical Development of Numerical Control Production**	3
1.1	Germany after World War II	3
1.2	Rebuilding the German Machine Tool Industry	3
1.3	Worldwide Changes	4
1.4	Typical New NC Machines	4
1.5	The Japanese Influence	5
1.6	The Crisis in Germany	5
1.7	Causes and Effects	5
1.8	Flexible Manufacturing Systems	6
1.9	Situation and Outlook	7
1.10	Conclusions	8
2.	**Milestones in the Development of NC**	9
3.	**What Are NC and CNC?**	12
3.1	The Path to NC	12
3.2	Hardware	13
3.3	Software	14
3.4	Control Methods	14
3.5	NC Axes	16
3.6	PLCs	18
3.7	Interface Section	19
3.8	Computers and NC	19
3.9	NC Programs and Programming	21
3.10	Data Input	21
3.11	Operation	24
3.12	Summary	25
	Important Points to Remember	27
Part 2	**Functions of Numerical Control Systems**	29
1.	**Implementation of Dimensional Data**	31
1.1	Introduction	31
1.2	Axis Designations	31
1.3	Closed-Loop Position Control	34
1.4	Position Measurement	35
1.5	Feed Drives	48
1.6	Summary	57
	Important Points to Remember	60

2. Implementation of Switching Information ... 61

2.1 Tool Changing ... 61
2.2 Automatic Workpiece Changing ... 66
2.3 Changing the Speed ... 69
2.4 Summary ... 69
Important Points to Remember ... 71

3. Functions of Numerical Control Systems ... 72

3.1 Definition ... 72
3.2 Basic Functions of CNC ... 72
3.3 Special Functions of CNC ... 77
3.4 CNC Displays ... 90
3.5 Open-Ended Control Systems ... 91
3.6 Price Considerations ... 92
3.7 Advantages of the Latest Developments in CNC ... 96
3.8 Summary ... 96
Important Points to Remember ... 98

4. PLCs: Programmable Logic Controllers ... 99

4.1 Definition ... 99
4.2 Origins of the PLC ... 99
4.3 Structure and Functions of PLCs ... 100
4.4 Data Buses and Field Buses ... 102
4.5 Advantages of PLCs ... 106
4.6 PLC Programming and Documentation ... 107
4.7 Programs ... 109
4.8 Program Memory ... 109
4.9 PLCs, CNC Systems, and PCs in Integrated Operation ... 110
4.10 Selection Criteria for PLCs ... 112
4.11 Summary ... 112
Important Points to Remember ... 116

5. Effects of CNC on Machine Components ... 117

5.1 Machine Configuration ... 117
5.2 Machine Frames ... 118
5.3 Guides ... 119
5.4 Main Drives ... 120
5.5 Machine Enclosures ... 125
5.6 Coolant Supply ... 125
5.7 Chip Removal ... 125
5.8 Summary ... 126
Important Points to Remember ... 127

Part 3 Types of Numerically Controlled Machines ... 129

1. Computer Numerical Control Machine Tools ... 131

1.1 Machining Centers, Milling Machines ... 131

1.2 Turning Machines ... 143
1.3 Grinding Machines ... 150
1.4 Gear-Cutting Machines ... 158
1.5 Drilling Machines ... 165
1.6 Parallel Kinematic Machines ... 169
1.7 Sawing Machines ... 170
1.8 Laser Machining Systems ... 173
1.9 Punching and Nibbling Machines ... 180
1.10 Tube-Bending Machines ... 183
1.11 Electrical-Discharge Machines ... 186
1.12 Electron-Beam Machines ... 187
1.13 Water-Jet Cutting Machines ... 189
1.14 Development Trends in Numerically Controlled Machine Tools ... 191
1.15 Measuring and Testing ... 194
1.16 Summary ... 199
Important Points to Remember ... 200

2. Additive Manufacturing Processes ... 203
2.1 Introduction ... 203
2.2 Definition ... 204
2.3 Process Chain ... 205
2.4 Classification of Additive Manufacturing Processes ... 207
2.5 Introduction to the Principal-Layer Manufacturing Processes ... 207
2.6 Summary ... 215
Important Points to Remember ... 216

3. Flexible Manufacturing Systems ... 217
3.1 Definition ... 217
3.2 Flexible Manufacturing Islands ... 217
3.3 Flexible Manufacturing Cells ... 220
3.4 Technical Characteristics of Flexible Manufacturing Systems ... 222
3.5 Application Criteria for Flexible Manufacturing Systems ... 224
3.6 Manufacturing Principles ... 225
3.7 Machine Selection and Layout ... 227
3.8 Workpiece-Transport Systems ... 227
3.9 CNC Systems Suitable for Flexible Manufacturing ... 234
3.10 Host Computers in Flexible Manufacturing Systems ... 235
3.11 Economic Advantages of Flexible Manufacturing Systems ... 237
3.12 Problems and Risks in the Design of Flexible Manufacturing Systems ... 239
3.13 Flexibility and Complexity ... 242
3.14 Simulation of Flexible Manufacturing Systems ... 243
3.15 Production Planning System (PPS) ... 244
3.16 Summary ... 245
Important Points to Remember ... 249

4. Industrial Robots and Handling ... 250
4.1 Introduction ... 250

4.2 Definition: What Is an Industrial Robot? ... 250
4.3 Structure of Industrial Robots ... 251
4.4 Mechanical Elements/Kinematics ... 251
4.5 Gripper or Effector ... 252
4.6 Controllers ... 254
4.7 Safe Robot Technology ... 256
4.8 Programming ... 258
4.9 Sensors ... 259
4.10 Application Examples for Industrial Robots ... 260
4.11 Application Criteria for Industrial Robots ... 262
4.12 Comparison of Industrial Robots and CNC Machines ... 265
4.13 Summary and Outlook ... 266
Important Points to Remember ... 267

Part 4 Tooling Systems for Computer Numerical Control Machines ... 269

1. Tooling Systems ... 271
1.1 Introduction ... 271
1.2 Tool Systems ... 271
1.3 Tool Presetting ... 280
1.4 In-House Tool Catalogs ... 280
1.5 Tool Identification ... 286
1.6 Tool Management ... 293
1.7 Tool Measurement and Monitoring with Laser Systems ... 296
1.8 Summary ... 298
Important Points to Remember ... 299

2. Close-to-Process Production Measurement Technology in Combination with Mechatronic Tool Systems ... 300
2.1 Introduction ... 300
2.2 Parallel Measurement Technologies ... 300
2.3 Close-to-Process Measurement in Idle Times ... 300
2.4 Close to the Process with Bore Gauges ... 301
2.5 Actuator-Driven Tool Systems Close the Control Circuit ... 302
2.6 Mechatronic Tool Systems ... 302
2.7 A Closed Process Chain ... 302
2.8 Outlook ... 306
2.9 Summary ... 306
Important Points to Remember ... 308

Part 5 Computer Numerical Control Programs and Programming ... 309

1. Computer Numerical Control Programs ... 311
1.1 Definition ... 311
1.2 Structure of NC Programs ... 311
1.3 Program Structure, Syntax, and Semantics ... 314

1.4 On/Off Commands (M-Functions) ... 315
1.5 Dimensional Data ... 315
1.6 Preparatory Functions (G-Functions) ... 317
1.7 Cycles ... 319
1.8 Zero Points and Reference Points ... 321
1.9 Transformation ... 326
1.10 Tool Compensation ... 327
1.11 Summary ... 328
Important Points to Remember ... 332

2. Programming of CNC Machines ... 333
2.1 Definition of NC Programming ... 333
2.2 Programming Methods ... 333
2.3 The NC Programmer ... 341
2.4 Graphics to Make Work Easier ... 341
2.5 Distributed Intelligence ... 343
2.6 Selecting a Suitable Programming System ... 344
2.7 Summary ... 345
Important Points to Remember ... 347

3. CNC Programming Systems ... 348
3.1 Introduction ... 348
3.2 Machining Processes Are Undergoing Major Changes ... 348
3.3 The Area of Application Sets the Priorities ... 348
3.4 Input Data from Various Sources ... 349
3.5 Capabilities of Modern NC Programming Systems (CAM) ... 349
3.6 Data Models with a Uniform High Standard ... 350
3.7 CAM-Oriented Geometry Manipulation ... 351
3.8 Only High-Performance Machining Strategies Count ... 353
3.9 3D Models Offer More ... 354
3.10 Innovation with Feature Technology ... 354
3.11 Automatic Object Detection ... 355
3.12 Machining Database ... 355
3.13 Tools ... 356
3.14 Clamping Planning and Definition of the Sequence ... 357
3.15 The Importance of Simulation ... 357
3.16 Postprocessors ... 359
3.17 Generated Data and Interfaces with the Machine Tools ... 359
3.18 Summary ... 359
Important Points to Remember ... 360

4. Manufacturing Simulation ... 361
4.1 Introduction ... 361
4.2 Qualitative Classification of Systems ... 361
4.3 Components of a Simulation Scenario ... 364

4.4 Procedure for NC Simulations ... 366
4.5 Fields of Application ... 369
4.6 Summary ... 372
Important Points to Remember ... 373

Part 6 Integrating Computer Numerical Control Technology into In-House Information Technology Systems ... 375

1. Direct Numerical Control or Distributed Numerical Control ... 377
1.1 Definition ... 377
1.2 Functions of DNC ... 377
1.3 Application Criteria for DNC Systems ... 377
1.4 Data Communication with CNC Systems ... 378
1.5 Methods for Requesting Programs ... 379
1.6 DNC Systems Currently Available ... 379
1.7 Network Technology for DNC ... 381
1.8 Advantages of Using Networks ... 383
1.9 NC Program Management ... 383
1.10 Advantages of DNC Operation ... 385
1.11 Cost-Effectiveness of DNC ... 385
1.12 Current State and Trends ... 387
1.13 Summary ... 388
Important Points to Remember ... 389

2. LANs—Local-Area Networks ... 390
2.1 Introduction ... 390
2.2 Local-Area Networks (LANs) ... 390
2.3 What Is Information? ... 390
2.4 Characteristics and Features of LANs ... 391
2.5 Gateways and Bridges ... 397
2.6 Criteria for Selecting a Suitable LAN ... 398
2.7 Interfaces ... 399
2.8 Summary ... 402
Important Points to Remember ... 404

3. Digital Product Development and Manufacturing: From CAD and CAM to PLM ... 405
3.1 Introduction ... 405
3.2 Terminology and History ... 405
3.3 Digital Product Development ... 410
3.4 Digital Manufacturing ... 414
3.5 Summary ... 417
Important Points to Remember ... 419

Glossary ... 421
Index ... 451
