

## Table of Contents

Introduction  
 Advanced Placement Chemistry and College Credit  
 How to Use This Book  
 What to Do on Exam Day  
 Calculator Use  
 The Content and Nature of the AP Exam in Chemistry  
 The Multiple Choice Section  
 The Free Response Section  
 Tips for Writing the Multiple Choice Section  
 Tips for Writing the Free Response Section

TOPIC

1	<b>INTRODUCTION: Matter and Measurement</b>	1
	Classification of Matter	
	Properties of Matter	
	Units of Measurement	
	Uncertainty in Measurement	
	Dimensional Analysis	
2	<b>ATOMS, MOLECULES, AND IONS</b>	7
	Important Contributions by Notable Scientists	
	The Modern View of Atomic Structure	
	The Periodic Table	
	Molecules and Molecular Compounds	
	Ions and Ionic Compounds	
	Naming Inorganic Compounds	
3	<b>STOICHIOMETRY: Calculations with Chemical Formulas and Equations</b>	25
	Chemical Equations	
	Simple Patterns of Reactivity	
	Avogadro's Number, the Mole, and Molar Masses	
	Calculating An Empirical Formula from Percentage Composition	
	Stoichiometry	
	Limiting Reactants	

4	<b>AQUEOUS REACTIONS AND SOLUTION STOICHIOMETRY</b>	45
	General Properties of Aqueous Solutions	
	Precipitation Reactions	
	Acid-Base Reactions	
	Oxidation-Reduction Reactions	
	Concentrations of Solutions	
	Solution Stoichiometry and Chemical Analysis	
5	<b>THERMOCHEMISTRY</b>	71
	The Nature of Energy	
	The First Law of Thermodynamics	
	Enthalpy	
	Enthalpies of Reaction	
	Calorimetry	
	Hess's Law	
	Enthalpies of Formation	
6	<b>ELECTRONIC STRUCTURE OF ATOMS</b>	93
	The Wave Nature of Light	
	Quantized Energy and Photons	
	Line Spectra and the Bohr Model	
	The Wave Behavior of Matter	
	Quantum Mechanics and Atomic Orbitals	
	Representations of Orbitals	
	Many Electron Atoms	
	Electron Configurations	
	Electron Configurations and the Periodic Table	
7	<b>PERIODIC PROPERTIES OF THE ELEMENTS</b>	113
	Effective Nuclear Charge	
	Sizes of Atoms and Ions	
	Ionization Energy	
	Electron Affinities	
	Metals, Nonmetals, and Metalloids	
	Group Trends for the Active Metals	
	Group Trends for Selected Nonmetals	
8	<b>BASIC CONCEPTS OF CHEMICAL BONDING</b>	131
	Chemical Bonds, Lewis Symbols, and the Octet Rule	
	Ionic Bonding	
	Covalent Bonding	
	Bond Polarity and Electronegativity	
	Drawing Lewis Structures	
	Resonance Structures	
	Exceptions to the Octet Rule	
	Strengths of Covalent Bonds	
9	<b>MOLECULAR GEOMETRY AND BONDING THEORY</b>	151
	The VSEPR Model	
	Molecular Shape and Molecular Polarity	

	Hybrid Orbitals	
	Multiple Bonds	
10	<b>GASES</b>	167
	Pressure	
	The Gas Laws	
	The Ideal-Gas Equation	
	Further Applications of the Ideal Gas Equation	
	Gas Mixtures and Partial Pressures	
	Kinetic-Molecular Theory	
	Molecular Effusion and Diffusion	
	Real Gases: Deviations from Ideal Behavior	
11	<b>INTERMOLECULAR FORCES, LIQUIDS, AND SOLIDS</b>	189
	Intermolecular Forces	
	Some Properties of Liquids	
	Phase Changes	
	Vapor Pressure	
	Phase Diagrams	
	Bonding in Solids	
12	<b>CHEMISTRY DIAGNOSTIC TEST</b>	205
13	<b>PROPERTIES OF SOLUTIONS</b>	223
	The Solution Process	
	Saturated Solutions and Solubility	
	Factors Affecting Solubility	
	Ways of Expressing Concentration	
	Colligative Properties	
14	<b>CHEMICAL KINETICS</b>	239
	Reaction Rates	
	Factors that Affect Reaction Rates	
	Concentration and Rate	
	The Change of Concentration with Time	
	Temperature and Rate	
	Reaction Mechanisms	
	Catalysis	
15	<b>CHEMICAL EQUILIBRIUM</b>	261
	The Concept of Equilibrium	
	The Equilibrium Constant	
	Interpreting and Working with Equilibrium Constants	
	Calculating Equilibrium Constants	
	Applications of Equilibrium Constants	
	Le Châtelier's Principle	
16	<b>ACID-BASE EQUILIBRIA</b>	279
	Acids and Bases: A Brief Review	
	Strong Acids and Bases	
	Brønsted-Lowry Acids and Bases	

	Weak Acids	
	Weak Bases	
	The Autoionization of Water	
	The Relationship Between $K_a$ and $K_b$	
	Lewis Acids and Bases	
	The pH Scale	
	Calculations Involving Strong Acids and Strong Bases	
	Calculations Involving Weak Acids	
	Calculations for Weak Bases	
	Acid-Base Properties of Salt Solutions	
	Acid-Base Behavior and Chemical Structure	
17	<b>ADDITIONAL ASPECTS OF AQUEOUS EQUILIBRIA</b>	305
	The Common Ion Effect	
	Buffer Solutions	
	Calculating the pH of a Buffer	
	Acid-Base Titrations	
	Solubility Equilibria	
	Factors that Affect Solubility	
	Complex Ions	
18	<b>CHEMISTRY OF THE ENVIRONMENT</b>	329
19	<b>CHEMICAL THERMODYNAMICS</b>	331
	Spontaneous Processes	
	Entropy and the Second Law of Thermodynamics	
	The Molecular Interpretation of Entropy	
	Entropy Changes in Chemical Reactions	
	Gibbs Free Energy	
	Free Energy and Temperature	
	Free Energy and the Equilibrium Constant	
20	<b>ELECTROCHEMISTRY</b>	349
	Oxidation States and Oxidation-Reduction Reactions	
	Balancing Oxidation-Reduction Equations	
	Voltaic Cells	
	Cell EMF Under Standard Conditions	
	Free Energy and Redox Reactions	
	Cell Emf Under Nonstandard Conditions	
	Electrolysis	
	The Electrolysis of Molten Sodium Chloride	
	The Electrolysis of Water Using an Inert Electrolyte	
21	<b>NUCLEAR CHEMISTRY AND ORGANIC CHEMISTRY</b>	377
	Radioactivity	
	Rates of Radioactive Decay	
	Introduction to Hydrocarbons	

**CHEMISTRY PRACTICE TEST 1****CHEMISTRY PRACTICE TEST 2**
