<i>List of Abbreviations</i>	ix
<i>Preface</i>	xi
<i>Introduction</i>	xiii
1. The Theory of Stress–Strain State	1
The concept of elastic continuum.....	1
Stress tensor.....	4
Stress tensor properties.....	6
Equilibrium equations of elastic bodies.....	7
Boundary equilibrium conditions	9
Principal axes and principal values of stress tensor	10
Maximal tangential stresses	13
Deviator and spherical part of stress tensor.....	16
Displacements and deformations strain tensor.....	18
Principal axes and principal values of strain tensor	21
Deviator and spherical part of strain tensor.....	22
Compatibility equation of deformations	24
Notes.....	25
Keywords.....	26
2. Physical Relations in the Elasticity Theory.....	27
Strain energy and elasticity potential.....	27
Hooke's law	30
Hooke's law for anisotropic material.....	31
Clapeyron formula.....	33
Temperature effects	34
SSS case study	36
Notes.....	40
Keywords.....	41
3. Statements and Problems Solving Procedures of Elasticity Theory.....	43
Boundary Problems	43
Statement of the elasticity theory problem in displacements (Lame's equations)	44
Statement of the elasticity theory problem in stresses (Beltrami–Michell equations)	46
Clapeyron theorem	47
The existence and uniqueness of the elasticity theory problem solution	48
Semi-inverse Saint-Venant's method.....	49
Statement of the elasticity theory problem in cylindrical and spherical coordinates	53
Notes.....	56
Keywords.....	57

Contents

4. Variational Methods	59
Lagrangian principle of virtual displacements	59
Castigliano's principle of virtual forces.....	64
Castigliano's theorems.....	66
Betti's reciprocal theorem.....	67
The variational Rayleigh–Ritz method.....	69
Bubnov–Galerkin's method.....	70
Ritz–Lagrange's method.....	70
Notes	71
Keywords.....	71
5. The Plane Elastic Problem.....	73
Plane strain state	73
Plane stress state	75
Compatibility equations for stresses.....	77
Airy's stress function	77
Examples of solutions of the plane elastic problem	78
Notes	81
Keywords.....	81
6. Plate Bending	83
Basic concepts and hypotheses.....	83
Displacements and deformations plates	85
Stresses and internal forces in plates	87
Differential equation of plate bending.....	89
Boundary conditions.....	90
Cylindrical bending of a rectangular plate	91
A rectangular plate at sinusoidal load.....	93
Solution in double trigonometric series.....	94
Application of a single trigonometric series.....	95
A rectangular plate on elastic foundation	97
Circular plate bending	99
Symmetrical bending of a circular plate.....	101
Elliptic plate.....	103
A circular elastic three-layer plate	104
An annular three-layer plate on an elastic foundation.....	126
Notes	133
Keywords.....	133
7. Deformation of a Half-Space and Contact Problems	135
An elastic half-space affected by surface forces.....	135
Fundamental solutions for an elastic half-plane	140
The problem of a punch on an elastic half-plane.....	145

The plane contact problem for two elastic bodies	149
Interaction of a punch on an elastic half-space	153
Hertzian problem	157
Notes.....	159
Keywords.....	160
8. Foundations of the Theory of Plasticity.....	161
Plasticity of materials at tension and compression.....	161
Plasticity conditions	164
Simple and complex loading	168
Hypotheses of the theory of small elastoplastic deformations	171
Formulation of the problem of small elastoplastic deformations.....	172
A method of elastic solutions.....	173
Geometric interpretation of loading process	175
The theory of plastic flow.....	178
An example of a limiting surface	182
Foundations of the general mathematical plasticity theory by A.A. Ilyushin	184
Elastoplastic bending of a circular three-layer plate	192
Variable loading of elastoplastic bodies	195
Cyclic loading in temperature field	202
Cyclic deformation of elastoplastic bodies in neutron field.....	209
Notes.....	213
Keywords.....	213
9. Linear Viscoelastic Continua.....	215
Creep and relaxation.....	215
Statement of linear viscoelasticity problems	219
Types of creep and relaxation kernels	220
Volterra's principle.....	223
Ilyushin's experimental and theoretical method.....	225
Time-temperature analogy	225
The theory of ageing.....	229
A circular linearly viscoelastic three-layer plate	229
Notes.....	234
Keywords.....	234
10. Thermoviscoelastoplasticity.....	235
Nonlinear viscoelastic continua.....	235
Nonlinear viscoelasticity equations accounting for the type of stress-strain state (SSS) effect	237
Viscoelastoplastic continua.....	237
A method of successive approximation in viscoelastoplasticity problems.....	238
A circular viscoelastoplastic three-layer plate	240
Keywords.....	253

Contents

11. Thermoviscoelastoplastic Characteristics of Materials	255
Aluminum alloy D-16T	255
Ceramic materials.....	261
Polytetrafluoroethylene	263
Radiation effect on mechanical properties of materials	271
Calculation of temperature fields in a three-layer plate	273
Notes.....	276
Keywords.....	276
12. Dynamic Problems of the Elasticity Theory.....	277
Statement of dynamic problems of the elasticity theory	277
Variational principle in dynamics.....	278
Free vibrations of elastic bodies	279
Forced vibrations of elastic bodies	281
Rayleigh's inequality and Ritz method.....	283
Vibrations of an elastic circular three-layer plate	285
Resonance vibrations of a circular three-layered plate.....	292
Notes.....	303
Keywords.....	303
Appendix	305
Tensors in Cartesian coordinates	305
Boundary conditions and displacements in Airy's functions.....	312
Generalized functions	314
Coefficients of linearly viscoelastic three-layer plate	317
Special functions.....	320
Notes.....	331
References.....	333
Index	337
