Foreword	xvii
Preface.....	xix
Acknowledgments	xxi
Authors	xxiii
Contributing Authors.....	xxvii
 Chapter 1 Aseptic processing and packaging: Past, present, and future.....	 1
<i>Jairus R.D. David</i>	
1.1 Framework and current state	1
1.2 Departures from optima and challenges	3
1.3 Current and future opportunities for optimization	4
References	8
 Chapter 2 United States history and evolution	 9
<i>Ralph H. Graves</i>	
2.1 Early pioneers.....	9
2.2 The Graves era.....	11
2.3 Jack Stambaugh.....	12
2.4 The first commercial aseptic plant	13
2.5 The real fresh company	13
2.6 The first aseptic form-fill-seal packages	13
2.7 Early aseptic packers.....	14
2.8 Restrictions for growth.....	15
2.9 Trends for the future	16
References	17
 Chapter 3 The U.S. markets for aseptic packaging.....	 19
<i>Thomas Szemplenski</i>	
3.1 Development	19
3.2 Aseptic metal can market.....	20
3.3 Aseptic bag-in-box.....	21
3.4 Aseptic paperboard market	25

3.5	Aseptic plastic cup market	28
3.6	Aseptic pouch market	29
3.7	Aseptic plastic bottle market	31

Chapter 4 Aseptic processing equipment and systems 33

Thomas Szemplenski

4.1	Introduction.....	33
4.2	Aseptic processing equipment	34
4.2.1	Basic requirements of aseptic processing equipment	34
4.2.2	Blending vessel, balance surge, formulation of product....	35
4.2.3	Timing pump	36
4.2.3.1	Pumping of foods containing particulates	37
4.2.4	Heat exchangers.....	39
4.2.4.1	Heating: Sterilization of the products.....	39
4.2.4.2	Steam injection or infusion heaters	39
4.2.4.3	Plate heat exchangers	41
4.2.4.4	Tubular heat exchangers	42
4.2.4.5	Regeneration	44
4.2.4.6	Scraped surface heat exchangers	47
4.2.4.7	Ohmic heating.....	48
4.2.4.8	Microwave heating	49
4.2.5	Continuous holding tubes.....	51
4.2.6	Deaerator.....	51
4.2.7	Controls.....	52
4.2.8	Aseptic surge tanks, barrier seals, and automatic air-operated valves	54
4.2.8.1	Aseptic surge tanks	54
4.2.8.2	Barrier seals	55
4.2.8.3	Valves.....	55
4.2.9	Homogenizers	57
4.2.10	Ingredients.....	58
4.2.11	Clean-in-place (CIP).....	59
4.2.11.1	Clean-in-place solutions.....	59
4.3	Plant layout considerations	61
4.3.1	Preparation and processing equipment and systems	61
4.3.2	Packaging system area (bacteriological conditions)	61
4.4	Utilities	63
4.4.1	System sterilization water	63
4.4.2	Preparation water	64
4.4.3	Heating/cooling water.....	65
4.4.4	Refrigerated water	66
4.4.5	Steam	67
4.4.6	Air	68

Contents

4.5	Filters	69
4.5.1	Gases.....	69
4.5.2	Liquids.....	71
4.5.3	HEPA filters	71
4.5.4	General information on filtration.....	72
4.6	Chemicals used as sterilizing agents (equipment)	72
4.6.1	Chlorine and iodine	73
4.6.2	Oxonia	74
4.6.3	Food acids	74
4.6.4	Ozone.....	75
4.6.5	Hydrogen peroxide.....	75
4.6.6	Ultraviolet	75
	References	76
 Chapter 5 Aseptic filling and packaging equipment		77
<i>Thomas Szemplenski</i>		
5.1	Development of aseptic packaging	77
5.2	Dole aseptic canning system.....	79
5.2.1	Can sterilizing unit.....	79
5.2.2	The filling section	80
5.2.3	Lid sterilizer	80
5.2.4	The sealer	81
5.3	Aseptic bag-in-box.....	81
5.4	Aseptic paperboard fillers.....	85
5.4.1	Tetra Pak.....	85
5.4.2	SIG Combibloc.....	88
5.5	Aseptic plastic cups.....	88
5.5.1	Bosch and Erca	88
5.5.2	OYSTAR Hassia, Erca, Gasti, and Hamba	89
5.5.3	Ampack Ammann, Benco, and Metal Box.....	89
5.6	Coffee creamers.....	91
5.7	Aseptic pouches	91
5.7.1	Bosch.....	92
5.7.2	DuPont/Liqui-Box and Inpaco	92
5.7.3	Fres-co	93
5.7.4	OYSTAR Hassia.....	93
5.7.5	Cryovac.....	93
5.8	Aseptic plastic bottle fillers.....	94
5.8.1	Ampack Ammann.....	95
5.8.2	Bosch.....	95
5.8.3	Krones	95
5.8.4	OYSTAR Hamba	95
5.8.5	Procomac.....	97
5.8.6	Serac.....	98

5.8.7	Shibuya Kogyo	99
5.8.8	Sidel/Tetra Laval.....	99
5.9	Stork.....	101
Chapter 6 Aseptic packaging materials and sterilants		103
<i>Robert Fox</i>		
6.1	Product requirements	103
6.2	Materials	103
6.2.1	Nonbarrier sheeting	105
6.2.2	Barrier sheeting.....	105
6.3	Sterilizing Agents	105
6.3.1	Heat.....	106
6.3.2	Hot water	106
6.3.3	Neutral aseptic system (NAS).....	106
6.3.4	Chemical sterilants.....	109
6.3.5	Radiation.....	109
6.4	Packaging systems.....	110
6.4.1	Dole aseptic canning.....	110
6.4.2	Preformed thermoformed containers.....	110
6.4.3	Form-fill-seal (FFS).....	110
6.5	Environmental considerations.....	115
Chapter 7 Aseptic bulk packaging.....		119
<i>Thomas Szemplenski</i>		
7.1	Aseptic bag-in-box.....	119
7.2	Aseptic bulk container	121
7.3	Aseptic bulk storage.....	122
7.4	Aseptic ocean liner transportation and storage.....	125
Chapter 8 Regulations for aseptic processing and packaging of food		129
<i>Ralph H. Graves</i>		
8.1	U.S. Food and Drug Administration requirements and approval	129
8.1.1	European versus U.S. approach.....	129
8.1.2	U.S. Food and Drug Administration and U.S. Department of Agriculture	129
8.1.3	Pasteurized milk ordinance.....	130
8.1.4	State regulations	130
8.1.5	Hazard analysis critical control point approach.....	130
8.2	Code of Federal Regulations (CFR).....	131
8.3	Low-acid food regulations and definitions	131
8.4	U.S. Food and Drug Administration: Specific concerns	133

Contents

8.5	Other requirements	135
	References	137
 Chapter 9 Validation and establishment of aseptic processing and packaging operations..... 139		
<i>Jairus R.D. David and V.R. (Bob) Carlson</i>		
9.1	Some considerations.....	139
9.2	Decision process	140
9.3	Equipment selection	140
9.4	Process schematic and process and instrument diagrams (P&IDs)	141
9.4.1	Process schematic	141
9.4.2	P&ID schematic.....	141
9.5	Preinstallation review	142
9.5.1	Sterilization, operation, clean-in-place, and maintenance	143
9.5.2	Interlocks.....	144
9.5.3	Hold tube	144
9.5.4	Timing pump	145
9.5.5	Controls	145
9.6	Postinstallation review	146
9.7	Equipment testing and validation.....	146
9.7.1	Aseptic processing system	147
9.7.2	Aseptic surge tank.....	148
9.7.3	Aseptic packaging system	150
9.7.3.1	Filler and filler bowl sterilization tests and sterile gas lines and fiber sterilization tests	150
9.7.3.2	Aseptic zone sterilization tests	151
9.7.3.3	Container and lid sterilization tests	152
9.7.3.4	Conveyor chain sterilization tests	152
9.8	Thermal process design for products containing particles (principles applicable to homogenous fluid foods).....	153
9.8.1	Scraped surface heat exchangers with straight hold tubes	153
9.8.2	Microbiological validation.....	154
9.8.2.1	Microbiological aspects.....	154
9.8.2.2	Quality and optimization considerations	155
9.8.3	Process filing	155
9.9	Factors other than temperature contributing to nonsterility	156
9.10	Summary	157
	Acknowledgments	158
	References	158

Chapter 10 Aseptic processing operations	161
<i>Thomas Szemplenski</i>	
10.1 Introduction.....	161
10.2 Presterilization of the processing system.....	162
10.3 Loss of sterility	163
10.4 Water-to-product separation	163
10.5 Product-to-water separation.....	164
10.6 Cleaning	165
10.7 Control.....	165
 Chapter 11 Thermal processing and optimization	 167
<i>Jairus R.D. David</i>	
11.1 Thermal processing and optimization	167
11.1.1 Introduction.....	167
11.1.2 Principles of thermal process calculations.....	167
11.1.3 Thermal process design and commercial sterility.....	170
11.1.4 Economic spoilage	170
11.1.5 Thermal destruction of enzymes, nutrients, and quality factors.....	171
11.1.6 Optimization of thermal processes for nutrients and quality retention	172
11.1.6.1 Agitated retort	172
11.1.6.2 The “Flash 18” process	172
11.1.6.3 Ultra-high temperature (UHT) processing and aseptic packaging.....	173
11.2 Comparison of conventional canning and aseptic processing and packaging of foods	174
11.2.1	
Comparison of conventional canning and aseptic processing and packaging of foods	174
11.2.2 Some advantages of aseptic processing and packaging of foods	175
11.2.2.1 Nutritional quality	175
11.2.2.2 Sensory quality	175
11.2.2.3 Microwaveability	175
11.3 Comparison of processing methods	178
11.3.1 Pasteurization.....	178
11.3.2 Ultra-pasteurization	179
11.3.3 Conventional canning.....	179
11.3.4 Refrigerated aseptic products	180
11.3.5 Comparison of continuous processing methods based on optimization hierarchy	180

Contents

11.4	Definitions	183
11.5	Nomenclature.....	185
	References	186

Chapter 12 Quality assurance and food protection for aseptically processed and packaged food..... 187

Jairus R.D. David

12.1	Introduction and concepts.....	187
12.1.1	Quality control.....	188
12.1.2	Quality assurance	188
12.2	Quality assurance for aseptically processed and packaged food	188
12.2.1	Preprocess assurance	189
12.2.1.1	Raw materials.....	189
12.2.2	In-process assurance	190
12.2.2.1	Batch preparation.....	190
12.2.2.2	Thermal processing operations	191
12.2.2.3	Aseptic filling and packaging operations	193
12.2.3	Postprocess assurance.....	196
12.2.3.1	Incubated product evaluation.....	197
12.2.3.2	Microbiological testing for sterility and sample size consideration.....	197
12.2.3.3	Distribution, handling, and storage.....	198
12.2.3.4	ASTM drop test.....	198
12.2.3.5	Cumulative assurance and product release.....	199
12.3	Hazard analysis critical control point (HACCP) program	199
12.3.1	Principles of HACCP.....	199
12.3.2	Categories of hazards.....	200
12.4	Others.....	200
12.4.1	Consumer complaints	200
12.4.2	Recalls and spoilage	201
	References	201

Chapter 13 Failure mode and effect analysis, and spoilage troubleshooting 203

Jairus R.D. David

13.1	Failure mode and effect analysis.....	203
13.2	Failure mode and effect analysis, and troubleshooting.....	203
13.2.1	Systems analysis and bioburden	204
13.2.1.1	Canning or retorting	204
13.2.1.2	Aseptic processing and packaging.....	204
13.2.2	Failure modes, analysis of their effects, and controls	207
13.2.2.1	Type 1: Incoming raw ingredients, handling, storage, and batching	207

13.2.2.2	Type 2: Equipment preparation and setup.....	208
13.2.2.3	Type 3: Thermal process design and delivery—Heat cycle.....	209
13.2.2.4	Type 4: Thermal process design and delivery—Cool cycle.....	210
13.2.2.5	Type 5: Incoming packaging material and its sterilization	210
13.2.2.6	Type 6: Aseptic zone integrity and environmental load	211
13.2.2.7	Type 7: Package seal integrity	213
13.2.3	Cause-and-effect relationships	213
13.2.3.1	Microbiological and package integrity testing for troubleshooting	213
13.2.4	Summary	214
13.3	Nomenclature.....	215
	Acknowledgments	216
	References	216
Chapter 14	Aseptic processing of particulate foods.....	217
	<i>Pablo M. Coronel, Josip Simunovic, and Kenneth R. Swartzel</i>	
14.1	Introduction.....	217
14.2	Considerations for equipment design	221
14.2.1	Heat exchangers.....	221
14.2.2	Novel heating technologies.....	223
14.2.3	Transport of liquids with particulates	227
14.3	Validation of aseptic processes with particulates	229
14.3.1	Available technologies and alternatives for validation	233
14.3.2	Practical considerations for validation of continuous flow sterilization treatments of particulate foods based on conservatively designed fabricated carrier particles and residence time and thermosensitive implants.....	238
14.3.3	Fabricated carrier particles: Selection, design, and relevant property adjustments.....	238
14.3.4	Achieving conservative thermal characteristics of carrier particle enclosures	240
14.3.5	Experimental confirmation and adjustment of conservative thermal properties	244
14.3.6	Thermal property adjustments for advanced heating applications.....	244
14.3.7	Tags and implants used within the carrier particle cavities for residence time and time–temperature history measurements.....	249

14.3.8	Insertion, unobstructed flow, and retrieval of fabricated tag and implant-carrying particles.....	254
14.4	Concluding remarks.....	259
	References	260

Chapter 15 Industry research and development, and management needs and challenges.....263

Jairus R.D. David

15.1	Introduction.....	263
15.2	Research and development needs and challenges	265
15.2.1	Raw product	265
15.2.1.1	Raw food quality.....	265
15.2.1.2	Thermization	266
15.2.1.3	Enzyme blockers and biotechnology	266
15.2.1.4	Economic spoilage and control	266
15.2.2	Processing.....	267
15.2.2.1	12D “Bot Cook” for milk.....	267
15.2.2.2	Lethality credit for come-up time	267
15.2.2.3	Control of hold time and temperature.....	268
15.2.2.4	Heat exchangers and product quality.....	269
15.2.2.5	Holding tubes.....	269
15.2.2.6	Cooling cycle and leak detection.....	271
15.2.2.7	Surge tank.....	271
15.2.2.8	Aseptic processing of low-acid particulate foods	271
15.2.2.9	Ohmic heating	273
15.2.2.10	Microwave heating	274
15.2.2.11	Other nonthermal processes	274
15.2.2.12	Additive and synergistic processes.....	274
15.2.3	Aseptic filling and packaging.....	274
15.2.3.1	Line speed.....	274
15.2.3.2	At-line and on-line measurements.....	275
15.2.3.3	Packaging issues	275
15.2.3.4	Bulk packaging.....	276
15.2.3.5	Pulsed light technology	276
15.2.3.6	Seal integrity.....	277
15.2.3.7	Aseptic filler or sterile work zone integrity and validation.....	277
15.2.3.8	Cleanup and extended run.....	279
15.2.3.9	Defect rate or sterility assurance level (SAL)	279
15.2.4	Finished product and package	281
15.2.4.1	Flavor problems.....	281
15.2.4.2	Gelation and other physical defects	281

15.2.4.3	Rapid microbiological methods.....	281
15.2.4.4	Consumer education	282
15.2.4.5	“Aseptic” versus quality fresh	282
15.2.4.6	Product development	283
15.3	Management and administrative challenges	283
15.3.1	Capital cost	283
15.3.2	Complexity	283
15.3.3	Reliability.....	284
15.3.4	Repair and maintenance.....	284
15.4	Future	285
15.5	Summary	286
	Acknowledgment.....	287
	References	287
 Appendices Contract manufacturing for aseptic processing and packaging.....		289
<i>Thomas Szemplenski</i>		
	Appendix A: Aseptic filler profiles.....	291
	Appendix B: Aseptic contract packers in the United States	349
