<i>Preface</i>	x
<b>1 The historical development of studies on soil–plant interactions</b>	<b>1</b>
Stephen Nortcliff and Peter J. Gregory	
1.1 Introduction	1
1.2 The search for the ‘principle’ of vegetation, 1630–1750	2
1.3 The search for plant nutrients	4
1.4 The beginnings of soil microbiology	10
1.5 The development and application of modern knowledge of soils	13
References	20
<b>2 Plant and crop science</b>	<b>22</b>
Sayed Azam-Ali	
2.1 Introductory principles of resource capture by crops	22
2.2 Growth and development	23
2.3 Solar radiation	27
2.4 Water	32
2.5 Integrating principles of resource capture by crops	42
2.6 Conclusion	45
References	46
<b>3 Soil fertility</b>	<b>49</b>
Elizabeth A. Stockdale, Keith W.T. Goulding, Timothy S. George, and Daniel V. Murphy	
3.1 Introduction	49
3.2 Concepts of soil fertility	50
3.3 Plant–soil interactions determining soil fertility	57
3.4 Assessing soil fertility	62
3.5 Managing soil fertility	72
References	79
<b>4 Soil organic matter</b>	<b>86</b>
David Powlson, Pete Smith, and Maria De Nobili	
4.1 Introduction	86
4.2 Factors influencing SOM content	88
4.3 Modelling SOM dynamics	93
4.4 Chemical structure of SOM as elucidated using new forms of spectroscopy – advances and pitfalls	100

4.5	Organo-mineral interactions	108
4.6	Fractionation methods for studying SOM	111
4.7	The living part of SOM – the soil microbial biomass	115
4.8	SOM and soil physical conditions and implications for plant growth	116
4.9	Soil C and climate change	120
	References	126
<b>5</b>	<b>Nitrogen and phosphorus cycles and their management</b>	<b>132</b>
	Phil M. Haygarth, Richard D. Bardgett, and Leo M. Condon	
5.1	Introduction	132
5.2	Sources of nitrogen and phosphorus to soil-plant systems	134
5.3	Chemical and biological processes of nutrient cycling, transformations and bioavailability	137
5.4	Processes of nitrogen and phosphorus losses from soils	145
5.5	Nitrogen and phosphorus use in agricultural systems	149
5.6	Future soil nutrient cycles and environmental change	153
	References	155
<b>6</b>	<b>Properties and management of cationic elements for crop growth</b>	<b>160</b>
	Philip J. White and Duncan J. Greenwood	
6.1	The movement of essential cationic elements to the root surface	160
6.2	Cationic elements in plants	163
6.3	The uptake of essential cationic elements from the rhizosphere	169
6.4	Cationic elements in the soil solution	173
6.5	Management practices increasing the acquisition of essential mineral cations	180
6.6	Genetic strategies to improve the efficiency of acquisition and physiological use of essential cationic elements	183
6.7	Concluding remarks	186
	References	187
<b>7</b>	<b>Managing adverse soil chemical environments</b>	<b>195</b>
	Mark E. Hodson and Erica Donner	
7.1	Potentially toxic metals (PTMs)	195
7.2	Salt-affected soils (saline, sodic and saline-sodic soils)	206
7.3	Acid and alkaline soils	218
	References	228
<b>8</b>	<b>Managing the soil physical environment for plants</b>	<b>238</b>
	Paul D. Hallett and A. Glyn Bengough	
8.1	Introduction	238
8.2	Basic physical properties of soil	238
8.3	Soil structure	241
8.4	Soil tillage and seedbeds	249
8.5	Critical soil physical conditions for plant growth	257
	References	261

<b>9</b>	<b>Soil water and its management</b>	<b>269</b>
	Anne Verhoef and Gregorio Egea	
9.1	Soil water management – a general overview	269
9.2	Key concepts related to water in soil	270
9.3	Soil water and plants	281
9.4	Determination of soil water balance and related variables	288
9.5	Water management to alleviate soil water shortage	298
9.6	Water management to alleviate excess water	308
	References	312
<b>10</b>	<b>Plant-induced changes in soil processes and properties</b>	<b>323</b>
	Philippe Hinsinger	
10.1	Introduction	323
10.2	Roles of plants in carbon cycling: deposition, burial and emission	324
10.3	Roles of plants in soil acidification	335
10.4	Roles of plants in the weathering of soil minerals	342
10.5	Conclusion	353
	References	355
<b>11</b>	<b>Sustainable management of soil and plant health by optimising soil biological function</b>	<b>366</b>
	Dominic Standing and Ken Killham	
11.1	Introduction	366
11.2	Managing soil and plant health	368
11.3	Conclusion	386
	References	386
<b>12</b>	<b>Managing the soil–plant system for the delivery of ecosystem services</b>	<b>390</b>
	David W. Hopkins and Edward G. Gregorich	
12.1	Introduction	390
12.2	Roles of soils	394
12.3	Sustainable soil use and soil quality	409
12.4	Concluding remarks	413
	References	414
<b>13</b>	<b>The new challenge – sustainable production in a changing environment</b>	<b>417</b>
	Peter J. Gregory and Stephen Nortcliff	
13.1	Introduction	417
13.2	Human-induced environmental change	418
13.3	Food security and food production	426
13.4	Routes to sustainable intensification	434
	References	442
	<i>Index</i>	449

*A colour plate section falls between pages 214 and 215*
