Preface	xvii
Acknowledgements	xix
List of Abbreviations	xxi
1 Introduction	1
1.1 Architectural Review of UMTS and GSM	1
1.1.1 <i>High Level Architecture</i>	1
1.1.2 <i>Architecture of the Radio Access Network</i>	2
1.1.3 <i>Architecture of the Core Network</i>	4
1.1.4 <i>Communication Protocols</i>	4
1.2 History of Mobile Telecommunication Systems	6
1.2.1 <i>From 1G to 3G</i>	6
1.2.2 <i>Third Generation Systems</i>	7
1.3 The Need for LTE	8
1.3.1 <i>The Growth of Mobile Data</i>	8
1.3.2 <i>Capacity of a Mobile Telecommunication System</i>	10
1.3.3 <i>Increasing the System Capacity</i>	11
1.3.4 <i>Additional Motivations</i>	11
1.4 From UMTS to LTE	11
1.4.1 <i>High Level Architecture of LTE</i>	11
1.4.2 <i>Long Term Evolution</i>	12
1.4.3 <i>System Architecture Evolution</i>	13
1.5 From LTE to LTE-Advanced	15
1.5.1 <i>The ITU Requirements for 4G</i>	15
1.5.2 <i>Requirements of LTE-Advanced</i>	15
1.5.3 <i>4G Communication Systems</i>	15
1.5.4 <i>The Meaning of 4G</i>	16
1.6 The 3GPP Specifications for LTE	16
References	18
2 System Architecture Evolution	21
2.1 Architecture of LTE	21
2.1.1 <i>High Level Architecture</i>	21
2.1.2 <i>User Equipment</i>	21
2.1.3 <i>Evolved UMTS Terrestrial Radio Access Network</i>	23

2.1.4	<i>Evolved Packet Core</i>	24
2.1.5	<i>Roaming Architecture</i>	25
2.1.6	<i>Network Areas</i>	26
2.1.7	<i>Numbering, Addressing and Identification</i>	27
2.2	Communication Protocols	28
2.2.1	<i>Protocol Model</i>	28
2.2.2	<i>Air Interface Transport Protocols</i>	29
2.2.3	<i>Fixed Network Transport Protocols</i>	30
2.2.4	<i>User Plane Protocols</i>	31
2.2.5	<i>Signalling Protocols</i>	31
2.3	Example Information Flows	33
2.3.1	<i>Access Stratum Signalling</i>	33
2.3.2	<i>Non Access Stratum Signalling</i>	33
2.3.3	<i>Data Transport</i>	35
2.4	Bearer Management	36
2.4.1	<i>The EPS Bearer</i>	36
2.4.2	<i>Tunnelling Using GTP</i>	37
2.4.3	<i>Tunnelling Using GRE and PMIP</i>	38
2.4.4	<i>Signalling Radio Bearers</i>	39
2.5	State Diagrams	40
2.5.1	<i>EPS Mobility Management</i>	40
2.5.2	<i>EPS Connection Management</i>	40
2.5.3	<i>Radio Resource Control</i>	41
2.6	Spectrum Allocation	42
	References	44
3	Digital Wireless Communications	47
3.1	Radio Transmission and Reception	47
3.1.1	<i>Signal Transmission</i>	47
3.1.2	<i>Signal Reception</i>	49
3.1.3	<i>Channel Estimation</i>	50
3.1.4	<i>Multiple Access Techniques</i>	51
3.1.5	<i>FDD and TDD Modes</i>	52
3.2	Multipath, Fading and Inter-Symbol Interference	53
3.2.1	<i>Multipath and Fading</i>	53
3.2.2	<i>Inter-Symbol Interference</i>	55
3.3	Error Management	56
3.3.1	<i>Forward Error Correction</i>	56
3.3.2	<i>Automatic Repeat Request</i>	57
3.3.3	<i>Hybrid ARQ</i>	58
	References	60
4	Orthogonal Frequency Division Multiple Access	61
4.1	Orthogonal Frequency Division Multiplexing	61
4.1.1	<i>Reduction of Inter-Symbol Interference using OFDM</i>	61
4.1.2	<i>The OFDM Transmitter</i>	62
4.1.3	<i>Initial Block Diagram</i>	65

4.2	OFDMA in a Mobile Cellular Network	66
4.2.1	<i>Multiple Access</i>	66
4.2.2	<i>Fractional Frequency Re-Use</i>	67
4.2.3	<i>Channel Estimation</i>	68
4.2.4	<i>Cyclic Prefix Insertion</i>	69
4.2.5	<i>Use of the Frequency Domain</i>	70
4.2.6	<i>Choice of Sub-Carrier Spacing</i>	72
4.3	Single Carrier Frequency Division Multiple Access	72
4.3.1	<i>Power Variations from OFDMA</i>	72
4.3.2	<i>Block Diagram of SC-FDMA</i>	73
	References	76
5	Multiple Antenna Techniques	77
5.1	Diversity Processing	77
5.1.1	<i>Receive Diversity</i>	77
5.1.2	<i>Closed Loop Transmit Diversity</i>	78
5.1.3	<i>Open Loop Transmit Diversity</i>	79
5.2	Spatial Multiplexing	80
5.2.1	<i>Principles of Operation</i>	80
5.2.2	<i>Open Loop Spatial Multiplexing</i>	82
5.2.3	<i>Closed Loop Spatial Multiplexing</i>	84
5.2.4	<i>Matrix Representation</i>	85
5.2.5	<i>Implementation Issues</i>	88
5.2.6	<i>Multiple User MIMO</i>	88
5.3	Beamforming	90
5.3.1	<i>Principles of Operation</i>	90
5.3.2	<i>Beam Steering</i>	91
5.3.3	<i>Dual Layer Beamforming</i>	92
5.3.4	<i>Downlink Multiple User MIMO Revisited</i>	93
	References	94
6	Architecture of the LTE Air Interface	95
6.1	Air Interface Protocol Stack	95
6.2	Logical, Transport and Physical Channels	97
6.2.1	<i>Logical Channels</i>	97
6.2.2	<i>Transport Channels</i>	97
6.2.3	<i>Physical Data Channels</i>	98
6.2.4	<i>Control Information</i>	99
6.2.5	<i>Physical Control Channels</i>	100
6.2.6	<i>Physical Signals</i>	100
6.2.7	<i>Information Flows</i>	101
6.3	The Resource Grid	101
6.3.1	<i>Slot Structure</i>	101
6.3.2	<i>Frame Structure</i>	103
6.3.3	<i>Uplink Timing Advance</i>	105
6.3.4	<i>Resource Grid Structure</i>	106
6.3.5	<i>Bandwidth Options</i>	106

6.4	Multiple Antenna Transmission	107
6.4.1	<i>Downlink Antenna Ports</i>	107
6.4.2	<i>Downlink Transmission Modes</i>	107
6.5	Resource Element Mapping	109
6.5.1	<i>Downlink Resource Element Mapping</i>	109
6.5.2	<i>Uplink Resource Element Mapping</i>	109
	References	112
7	Cell Acquisition	113
7.1	Acquisition Procedure	113
7.2	Synchronization Signals	114
7.2.1	<i>Physical Cell Identity</i>	114
7.2.2	<i>Primary Synchronization Signal</i>	115
7.2.3	<i>Secondary Synchronization Signal</i>	116
7.3	Downlink Reference Signals	116
7.4	Physical Broadcast Channel	117
7.5	Physical Control Format Indicator Channel	118
7.6	System Information	119
7.6.1	<i>Organization of the System Information</i>	119
7.6.2	<i>Transmission and Reception of the System Information</i>	121
7.7	Procedures After Acquisition	121
	References	122
8	Data Transmission and Reception	123
8.1	Data Transmission Procedures	123
8.1.1	<i>Downlink Transmission and Reception</i>	123
8.1.2	<i>Uplink Transmission and Reception</i>	125
8.1.3	<i>Semi Persistent Scheduling</i>	126
8.2	Transmission of Scheduling Messages on the PDCCH	127
8.2.1	<i>Downlink Control Information</i>	127
8.2.2	<i>Resource Allocation</i>	128
8.2.3	<i>Example: DCI Format 1</i>	129
8.2.4	<i>Radio Network Temporary Identifiers</i>	130
8.2.5	<i>Transmission and Reception of the PDCCH</i>	131
8.3	Data Transmission on the PDSCH and PUSCH	132
8.3.1	<i>Transport Channel Processing</i>	132
8.3.2	<i>Physical Channel Processing</i>	133
8.4	Transmission of Hybrid ARQ Indicators on the PHICH	135
8.4.1	<i>Introduction</i>	135
8.4.2	<i>Resource Element Mapping of the PHICH</i>	136
8.4.3	<i>Physical Channel Processing of the PHICH</i>	136
8.5	Uplink Control Information	137
8.5.1	<i>Hybrid ARQ Acknowledgements</i>	137
8.5.2	<i>Channel Quality Indicator</i>	137
8.5.3	<i>Rank Indication</i>	138
8.5.4	<i>Precoding Matrix Indicator</i>	139

8.5.5	<i>Channel State Reporting Mechanisms</i>	139
8.5.6	<i>Scheduling Requests</i>	140
8.6	Transmission of Uplink Control Information on the PUCCH	140
8.6.1	<i>PUCCH Formats</i>	140
8.6.2	<i>PUCCH Resources</i>	142
8.6.3	<i>Physical Channel Processing of the PUCCH</i>	142
8.7	Uplink Reference Signals	143
8.7.1	<i>Demodulation Reference Signal</i>	143
8.7.2	<i>Sounding Reference Signal</i>	144
8.8	Uplink Power Control	145
8.8.1	<i>Uplink Power Calculation</i>	145
8.8.2	<i>Uplink Power Control Commands</i>	146
8.9	Discontinuous Reception	146
8.9.1	<i>Discontinuous Reception and Paging in RRC_IDLE</i>	146
8.9.2	<i>Discontinuous Reception in RRC_CONNECTED</i>	147
	References	148
9	Random Access	151
9.1	Transmission of Random Access Preambles on the PRACH	151
9.1.1	<i>Resource Element Mapping</i>	151
9.1.2	<i>Preamble Sequence Generation</i>	153
9.1.3	<i>Signal Transmission</i>	153
9.2	Non Contention Based Procedure	154
9.3	Contention Based Procedure	155
	References	156
10	Air Interface Layer 2	159
10.1	Medium Access Control Protocol	159
10.1.1	<i>Protocol Architecture</i>	159
10.1.2	<i>Timing Advance Commands</i>	160
10.1.3	<i>Buffer Status Reporting</i>	161
10.1.4	<i>Power Headroom Reporting</i>	162
10.1.5	<i>Multiplexing and De-Multiplexing</i>	162
10.1.6	<i>Logical Channel Prioritization</i>	163
10.1.7	<i>Scheduling of Transmissions on the Air Interface</i>	163
10.2	Radio Link Control Protocol	164
10.2.1	<i>Protocol Architecture</i>	164
10.2.2	<i>Transparent Mode</i>	165
10.2.3	<i>Unacknowledged Mode</i>	165
10.2.4	<i>Acknowledged Mode</i>	166
10.3	Packet Data Convergence Protocol	167
10.3.1	<i>Protocol Architecture</i>	167
10.3.2	<i>Header Compression</i>	168
10.3.3	<i>Prevention of Packet Loss During Handover</i>	169
	References	170

11	Power-On and Power-Off Procedures	173
11.1	Power-On Sequence	173
11.2	Network and Cell Selection	175
11.2.1	<i>Network Selection</i>	175
11.2.2	<i>Closed Subscriber Group Selection</i>	175
11.2.3	<i>Cell Selection</i>	176
11.3	RRC Connection Establishment	177
11.3.1	<i>Basic Procedure</i>	177
11.3.2	<i>Relationship with Other Procedures</i>	178
11.4	Attach Procedure	179
11.4.1	<i>IP Address Allocation</i>	179
11.4.2	<i>Overview of the Attach Procedure</i>	180
11.4.3	<i>Attach Request</i>	180
11.4.4	<i>Identification and Security Procedures</i>	182
11.4.5	<i>Location Update</i>	183
11.4.6	<i>Default Bearer Creation</i>	184
11.4.7	<i>Attach Accept</i>	185
11.4.8	<i>Default Bearer Update</i>	186
11.5	Detach Procedure	187
	References	188
12	Security Procedures	191
12.1	Network Access Security	191
12.1.1	<i>Security Architecture</i>	191
12.1.2	<i>Key Hierarchy</i>	192
12.1.3	<i>Authentication and Key Agreement</i>	193
12.1.4	<i>Security Activation</i>	195
12.1.5	<i>Ciphering</i>	196
12.1.6	<i>Integrity Protection</i>	197
12.2	Network Domain Security	197
12.2.1	<i>Security Protocols</i>	197
