INTRODUCTION: STATISTICAL QUESTIONS	1
1. DATA: PLOTS AND LOCATION	13
1.1 Plot the Data	13
1.2 Measures of Location: Single Observations	16
1.3 Measures of Location: Paired Observations	21
1.4 Robust Measures of Location: Paired Observations	31
1.5 Linear Algebra for Least Squares (Optional)	34
Exercises	37
2. DATA: DISPERSION AND CORRELATION	43
2.1 Measures of Dispersion: Single Observations	43
2.2 Measures of Dispersion: Paired Observations	47
2.3 Robust Measures of Dispersion: Paired Observations	51
2.4 Analysis of Variance	54
2.5 Measures of Linear Relationship	58
2.6 Analysis of Variance using Linear Algebra (Optional)	65
Exercises	74
3. RANDOM VARIABLES: PROBABILITY AND DENSITY	79
3.1 Random Variables	79
3.2 Probability	81
3.3 Finding Probabilities	84
3.4 Densities: Discrete Random Variables	90
3.5 Densities: Continuous Random Variables	92
3.6 Binomial Random Variables	97
3.7 Normal Random Variables	102
Exercises	108
4. RANDOM VARIABLES: EXPECTATION AND VARIANCE	113
4.1 Expectation of a Random Variable	113
4.2 Properties of Expectation	118
4.3 Independent Random Variables	123
4.4 Variance of a Random Variable	128
4.5 Correlation Coefficient	137
4.6 Properties of Normal Random Variables	143

4.7	Linear Algebra for Random Vectors (Optional)	145
	Exercises	151
5.	STATISTICAL INFERENCE	155
5.1	Populations and Samples	156
5.2	Unbiases Estimators	161
5.3	Distribution of \bar{X}	165
5.4	Confidence Intervals	174
5.5	Hypothesis Testing	180
5.6	General Inference Problem	185
5.7	The Runs Test for Randomness	191
5.8	Testing for Normality	194
5.9	Linear Algebra for Inference (Optional)	204
	Exercises	211
6.	SIMPLE LINEAR MODELS	217
6.1	Basics of the Simple Linear Model	217
6.2	Estimators for the Simple Linear Model	219
6.3	Inference for the Slope	221
6.4	Testing the Hypothesis $b = 0$	224
6.5	Coefficient of Determination	230
6.6	Inference for the Intercept	232
6.7	Inference for the Variance	235
6.8	Prediction Intervals	236
6.9	Regression Through the Origin	241
6.10	Earthquake Example	244
6.11	Linear Algebra: The Simple Linear Model (Optional)	246
	Exercises	252
7.	LINEAR MODEL DIAGNOSTICS	259
7.1	Residual Plots	261
7.2	Standardized Residuals	264
7.3	Testing Assumption 1: Is X a Valid Predictor?	268
7.4	Testing Assumption 2: Does $E(\epsilon_i) = 0$ for all i ?	269
7.5	Testing Assumption 2: Does $Var(\epsilon_i) = \sigma^2$ for all i ?	284
7.6	Testing Assumption 3: Are the Errors Independent?	290
7.7	Testing Assumption 4: Are the Errors Normal?	299
7.8	Distribution of the Residuals	303
7.9	Linear Algebra for Residuals (Optional)	307
	Exercises	319
8.	LINEAR MODELS: TWO INDEPENDENT VARIABLES	331
8.1	Calculating Parameters	333
8.2	Analysis of Variance	337

CONTENTS

8.3	The Effects of Independent Variables	341
8.4	Inference for the Bivariate Linear Model	345
8.5	Diagnostics for the Bivariate Linear Model	351
8.6	Linear Algebra: Bivariate Linear Model (Optional)	362
	Exercises	365
9.	LINEAR MODELS: SEVERAL INDEPENDENT VARIABLES	369
9.1	A Multivariate Example	370
9.2	Analysis of Variance	372
9.3	Inference for the Multivariate Linear Model	374
9.4	Selecting Predictors	377
9.5	Diagnostics for the Multivariate Model	388
9.6	A Larger Example	390
9.7	A Curious Example	396
9.8	Linear Algebra: Multivariate Linear Model (Optional)	399
	Exercises	407
10.	MODEL BUILDING	411
10.1	Transformations	413
10.2	Indicator Variables	429
10.3	Using R^2 Carefully	434
10.4	Selection of Predictors	437
10.5	Outliers and Influence	442
10.6	Comprehensive Example: College Presidents	447
10.7	Linear Algebra for Model Building (Optional)	457
	Exercises	465
11.	EXTENDED LINEAR MODELS	469
11.1	Analysis of Variance Models	469
11.2	Analysis of Covariance Models	480
11.3	Diagnostics for ANOVA and ANCOVA	485
11.4	Binary Logistic Regression Models	495
11.5	Robust Regression Methods	504
11.6	Total Least Squares	508
11.7	Linear Algebra for ANOVA (Optional)	517
	Exercises	522
	APPENDIX A: Data References	531
	APPENDIX B: MINITAB Reference	541
	APPENDIX C: Introduction to Linear Algebra	551
	APPENDIX D: Statistical Tables	567
