Foreword	xiii
Preface	xv
Acknowledgments	xix

SECTION 1: Fundamentals for Model-Based Engineering

Chapter 1: Overview of Model-Based Engineering	3
1.1 Introduction	3
1.2 Multiple Facets of Modeling.....	5
1.3 Hierarchical Design.....	9
1.4 Partitioning	11
1.5 Specifications	12
1.6 Keys and Barriers to Adoption of Model-Based Engineering.....	12
Conclusions.....	15
Chapter 2: The Design and Verification Process	17
2.1 Introduction to the Design Process.....	17
2.2 Validation, Verification, and Requirements	17
2.3 The Design and Verification Process	18
2.4 System/Functional Level: Executable Specification	21
2.5 Architectural Level.....	24
2.6 Implementation Level	25
2.7 Model-Based Engineering – A Winning Approach	25
Chapter 3: Design Analysis.....	27
3.1 Introduction	27
3.2 Manual Analysis.....	28
3.2.1 Hand Calculations.....	28
3.2.2 Emulation, Experimentation, and Prototyping.....	32

Contents

3.3	Computer Simulation	33
3.3.1	Simulation Algorithms	34
3.3.4	Practical Issues.....	67
	Summary	76
	Conclusion	77
	References and Further Reading	78
Chapter 4:	Modeling of Systems	79
4.1	Modeling in the Context of Design	79
4.2	Modeling Hierarchy	81
4.2.1	Hierarchy Concepts	81
4.2.2	Partitioning.....	82
4.3	Fundamentals of Modeling	83
4.3.1	Definition of a Model.....	83
4.3.2	Representing Model Variables	84
4.3.3	Representing Model Behavior.....	84
4.3.4	Representing Model Structure.....	86
4.3.5	Analog Connections.....	86
4.3.6	Discrete Connections	87
4.3.7	Generic Versus Component Models	89
4.3.8	Models and Effects	90
4.3.9	Conservation of Energy	91
4.3.10	Branches.....	94
4.4	Specific Modeling Techniques.....	96
4.4.1	Introduction.....	96
4.4.2	Behavioral Modeling Using HDLs	96
4.4.3	Behavioral Modeling Using Macromodeling.....	96
4.4.4	Structure in Behavioral Modeling	97
4.4.5	Signal Flow Models.....	97
4.4.6	Analog Conserved Models	102
4.4.7	Discrete Models	102
4.4.8	Event-Based Models.....	103
4.4.9	Mixed-Signal Boundaries	104
4.5	Forms of Representation	108
4.5.1	HDLs.....	109
4.5.2	C and System-C.....	112
4.5.3	System Level Modeling: Matlab	113
4.5.4	System Level Modeling: UML	117

4.6	Modeling Tools	118
4.6.1	Bottom-Up Tools	118
4.6.2	Top-Down Modeling Tools	119
4.6.3	Graphical Modeling	119
4.7	Future Proofing	120
4.7.1	Common Frameworks	121
4.7.2	Libraries	121
4.7.3	Standards	121
4.7.4	Language Independence	122
4.7.5	Graphical Representation	122
	Conclusion	123
	References	123
	Further Reading	124

SECTION 2: Modeling Approaches

Chapter 5:	<i>Graphical Modeling</i>	127
5.1	Introduction	127
5.2	Modeling on Top of Languages	128
5.3	Model Abstraction	128
5.4	Getting started with ModLyng	129
5.5	Creating a Simple Model	131
5.6	Libraries and Models	144
5.7	Effects and Models	147
5.8	Hierarchical Models – Using the Schematic Editor	149
5.9	Test Benches and Model Validation	152
5.10	Examples	154
5.1.1	Example 5.1	155
5.1.2	Example 5.2	161
	Conclusion	162
	Appendix	162
	Reference	167
	Further Reading	167
Chapter 6:	<i>Block Diagram Modeling and System Analysis</i>	169
6.1	Introduction	169
6.2	Signal Flow Modeling	169
6.3	State Machines	174

Contents

6.3.1	Finite State Machines	174
6.3.2	State Transition Diagrams	175
6.3.3	Algorithmic State Machines	175
6.4	Algorithmic Models	182
6.4.1	Introduction	182
6.4.2	System-C	184
6.5	Transfer Function Modeling	187
6.5.1	Introduction	187
6.5.2	Transfer Function Modeling Example	190
6.5.3	State Space Modeling	193
	Conclusion	194
Chapter 7: Multiple Domain Modeling		197
7.1	Continuous-Time, Conserved Modeling	197
7.1.1	Introduction	197
7.1.2	Fundamentals	198
7.1.3	Procedure for Model Creation	202
7.1.4	Electrical Domain	204
7.1.5	Thermal System Modeling	216
7.1.6	Magnetic System Modeling	224
7.1.7	Electromagnetic System Modeling	236
7.1.8	Mechanical System Modeling	241
7.1.9	Fluidic Systems	251
7.1.10	Optical Systems	253
	Conclusion	258
	References	258
Chapter 8: Event-Based Modeling		259
8.1	Event-Based Modeling	259
8.1.1	Introduction	259
8.1.2	Practical Issues	261
8.1.3	Digital Logic Modeling	265
8.1.4	Harsh Realities	276
8.1.5	Sampled Data Systems (Z-domain)	279
	Conclusion	303
Chapter 9: Fast Analog Modeling		305
9.1	Introduction	305

9.2	Averaged Modeling.....	306
9.2.1	Introduction.....	306
9.2.2	An Example Switching Power Supply: The Buck Converter	306
9.2.3	Modeling a Buck Converter Using a “real” MOSFET Model.....	309
9.2.4	Modeling a Buck Converter Using an “ideal” MOSFET Model – Switch	312
9.2.5	Modeling a Buck Converter Using State Space Modeling Techniques	314
9.2.6	Modeling a Buck Converter Using an Averaged Switch Model.....	324
9.2.7	Summary of Averaged Modeling Techniques	330
9.3	Fast Analog Modeling.....	331
9.3.1	Introduction.....	331
9.3.2	Rationale – Why Would We Do This?.....	332
9.3.3	Event-based Analog Modeling.....	333
9.3.4	Non-Linear Modeling	334
9.3.5	Assertion-based Testing.....	338
9.4	Finite-Difference Modeling	340
9.4.1	Introduction.....	340
9.4.2	Description of Approach	341
9.4.3	Example 9.1	342
	Conclusion	344
	References.....	345
	Further Reading	346
Chapter 10:	<i>Model-Based Optimization Techniques</i>	347
10.1	Introduction	347
10.2	Overview of Optimization Methods	347
10.2.1	Univariate Search Methods	348
10.2.2	Simulated Annealing	348
10.2.3	Genetic Algorithms.....	349
10.2.4	Multi-Objective Optimization	351
10.2.5	NSGA-II.....	353
10.2.6	Pareto-Based Optimization.....	354
10.2.7	Particle Swarm Optimization	357
10.2.8	Levenberg–Marquardt Algorithm	357
10.2.9	Summary of Optimization Techniques	357

Contents

10.3 Case Study: Optimizing Magnetic Material Model	
Parameters	358
10.3.1 Introduction.....	358
10.3.2 Magnetic Material Model Optimization	
Procedure	358
10.3.3 Comparison of Optimization Methods.....	359
10.3.4 Statistical Analysis of Optimization Methods	361
10.3.5 Multiple Loop Optimization.....	362
10.3.6 Outline of Minor Loop Modeling using	
Turning Points	365
10.3.7 Testing the Modified Jiles–Atherton Model	
Behavior	365
Conclusion	365
References.....	366
Chapter 11: Statistical and Stochastic Modeling.....	369
11.1 Introduction	369
11.2 Fundamentals of Noise	370
11.2.1 Definitions.....	370
11.2.2 Calculating the Effect of Noise in a Circuit.....	371
11.2.3 Power Spectral Density of Noise	372
11.2.4 Types of Noise.....	372
11.2.5 Thermal Noise	373
11.2.6 Modeling and Simulation of Noise	377
11.2.7 Summary of Noise Modeling	378
11.3 Statistical Modeling	379
11.3.1 Introduction.....	379
11.3.2 Basic Statistical Behavior.....	380
11.3.3 Modeling Distributions.....	384
11.3.4 How to Interpret Variation in Models.....	387
11.3.5 Statistical Simulation Methods – Monte Carlo.....	387
11.3.6 Random Numbers and “Seed”.....	388
11.3.7 Practical Statistical Simulation.....	389
11.3.8 Establishing the Relationship Between Component	
and Performance Variation.....	393
11.3.9 Improving the Circuit Yield Based on Simulation	394
Conclusion	399
References.....	400

SECTION 3: Design Methods

Chapter 12: Design Flow	403
12.1 Introduction	403
12.2 Requirements and Specifications	404
12.2.1 Executable Specifications	405
12.3 Initial Design – First Cut	410
12.3.1 Design Partitioning and Reuse	410
12.4 Detailed Design	412
12.4.1 Second-Order Effects	412
12.4.2 Focusing on Interfaces and Design Complexity	412
12.5 Optimal Design	414
12.6 Chip Integration and Verification	415
Conclusion	416
References	416
Chapter 13: Complex Electronic System Design Example	417
13.1 Introduction	417
13.2 Key Requirements	420
13.3 Top Level Model and Chip Architecture	421
13.3.1 Chip Architecture	421
13.3.2 Specification Definition and Capture	423
13.3.3 RF Section Design	425
13.3.4 Baseband Analog Design	444
13.3.5 Digital Core Design	453
13.3.6 Summary	454
13.4 Initial Design – First Cut	454
13.4.1 An Introduction to Design Partitioning and Reuse	454
13.4.2 Initial Design Partition	455
13.4.3 Models and Levels	456
13.4.4 RF System – Level 0 Blocks	456
13.4.5 Baseband Analog Blocks	466
13.4.6 Digital Blocks	472
13.4.7 Integration of Level 0 Executable Specifications	476
13.4.8 Summary of Level 0 Modeling	482
13.5 Detailed Design	482
13.5.1 Introduction	482
13.5.2 RF Detailed Design	483

Contents

13.5.3	Baseband Analog	492
13.5.4	Digital Blocks	499
13.5.5	Integration of Level 1 Executable Specifications.....	501
13.5.6	Summary of Level 1 Modeling	503
13.6	Bringing It All Together	503
	References.....	506

<i>Index</i>	507
