Part IA Solar Cells

IA-1. Principles of Solar Cell Operation

<i>T. Markvart and L. Castañer</i>	3
1. Introduction	3
2. Electrical Characteristics	5
3. Optical Properties	11
4. Typical Solar Cell Structures	14
References	24

IA-2. Semiconductor Materials and Modelling

<i>T. Markvart and L. Castañer</i>	27
1. Introduction	27
2. Semiconductor Band Structure	28
3. Carrier Statistics in Semiconductors	33
4. The Transport Equations	35
5. Carrier Mobility	36
6. Carrier Generation by Optical Absorption	39
7. Recombination	41
8. Radiation Damage	46
9. Heavy Doping Effects	48
10. Properties of Hydrogenated Amorphous Silicon	49
Acknowledgements	52
References	52

IA-3. Ideal Efficiencies

<i>P.T. Landsberg and T. Markvart</i>	55
1. Introduction	55
2. Thermodynamic Efficiencies	56
3. Efficiencies in Terms of Energies	57
4. Efficiencies Using the Shockley Solar Cell Equation	58
5. General Comments on Efficiencies	63
References	65

Part IB Crystalline Silicon Solar Cells

IB-1. Crystalline Silicon: Manufacture and Properties

<i>F. Ferrazza</i>	69
1. Introduction	69
2. Characteristics of Silicon Wafers for Use in PV Manufacturing	70
3. Feedstock Silicon	76
4. Crystal-Preparation Methods	76
5. Shaping and Wafering	82
References	85

IB-2. High-Efficiency Silicon Solar Cell Concepts

<i>M.A. Green</i>	87
1. Introduction	88
2. High-Efficiency Laboratory Cells	88
3. Screen-Printed Cells	98
4. Laser-Processed Cells	102
5. HIT Cell	106
6. Rear-Contacted Cells	107
7. Conclusions	109
Acknowledgements	110
References	110

IB-3. Thin Silicon Solar Cells

<i>M. Mauk, P. Sims, J. Rand and A. Barnett</i>	115
1. Introduction, Background, and Scope of Review	116
2. Light Trapping in Thin Silicon Solar Cells	118
3. Voltage Enhancements in Thin Silicon Solar Cells	127
4. Silicon Deposition and Crystal Growth for Thin Solar Cells	131
5. Thin Silicon Solar Cells Based on Substrate Thinning	140
6. Summary of Device Results	142
References	146

Part IC Thin Film Technologies

IC-1. Thin-Film Silicon Solar Cells

<i>A. Shah</i>	159
1. Introduction	160
2. Hydrogenated Amorphous Silicon (a-Si:H) Layers	164
3. Hydrogenated Microcrystalline Silicon ($\mu\text{c-Si:H}$) Layers	173
4. Functioning of Thin-Film Silicon Solar Cells with p-i-n and n-i-p Structures	181
5. Tandem and Multijunction Solar Cells	197
6. Module Production and Performance	203
7. Conclusions	215
References	216

IC-2. CdTe Thin-Film PV Modules

<i>D. Bonnet</i>	225
1. Introduction	226
2. Steps for Making Thin-Film CdTe Solar Cells	227
3. Making of Integrated Modules	243
4. Production of CdTe Thin-Film Modules	246
5. The Product and Its Application	255
6. The Future	258
References	259

IC-3. Cu(In,Ga)Se₂ Thin-Film Solar Cells

<i>U. Rau and H.W. Schock</i>	261
1. Introduction	262
2. Material Properties	263
3. Cell and Module Technology	269
4. Device Physics	282
5. Wide-Gap Chalcopyrites	289
6. Conclusions	295
Acknowledgements	296
References	296

IC-4. Progress in Chalcopyrite Compound Semiconductor Research for Photovoltaic Applications and Transfer of Results into Actual Solar Cell Production

<i>A. Jäger-Waldau</i>	305
1. Introduction	306
2. Research Directions	307
3. Industrialisation	310
4. Conclusions and Outlook	320
References	320

IC-5. High-Efficiency Back-Contact Silicon Solar Cells for One-Sun and Concentrator Applications

<i>P.J. Verlinden</i>	327
1. Introduction	327
2. Concentrator Applications of IBC Solar Cells	328
3. Back-Contact Silicon Solar Cells	332
4. Modelling of Back-Contact Solar Cells	335
5. Perimeter and Edge Recombination	339
6. Manufacturing Process for Back-Contact Solar Cells	340
7. Stability of Back-Contact Cells	341
8. Toward 30% Efficiency Silicon Cells	343
9. How to Improve the Efficiency of Back-Contact Solar Cells	344
10. Conclusions	349
Acknowledgements	349
References	349

IC-6. High Efficiency III–V Multijunction Solar Cells

<i>S.P. Philipps, F. Dimroth and A.W. Bett</i>	353
1. Introduction	353
2. Special Aspects of III–V Multijunction Solar Cells	355
3. III–V Solar Cell Concepts	361
4. Conclusions	373
Acknowledgements	374
References	374

Part ID Dye-Sensitized and Organic Solar Cells**ID-1. Dye-Sensitized Photoelectrochemical Cells**

<i>A. Hagfeldt, U.B. Cappel, G. Boschloo, L. Sun, L. Kloo, H. Pettersson and E. A. Gibson</i>	385
1. Introduction	386
2. Photoelectrochemical Cells	388
3. Dye-Sensitized Solar Cells	400
4. Future Outlook	433
References	434

ID-2. Organic Solar Cells

<i>C. Dyer-Smith and J. Nelson</i>	443
1. Introduction	443
2. Organic Electronic Materials	444
3. Principles of Device Operation	447
4. Optimising Solar Cell Performance	451
5. Production Issues	457
6. Conclusions	460
References	461

PART II Testing, Industry and Environment**Part IIA Testing, Monitoring and Calibration****IIA-1. Characterization and Diagnosis of Silicon Wafers, Ingots, and Solar Cells**

<i>A. Cuevas, D. Macdonald, R.A. Sinton</i>	469
1. Introduction	470
2. Factors Affecting Carrier Recombination	470
3. Measurement of the Minority-Carrier Lifetime	473
4. Relationship Between Device Voltage and Carrier Lifetime	486
5. Applications to Process Monitoring and Control of Silicon Solar Cells	487
6. Conclusions	495

Contents

Acknowledgements	495
References	495

IIA-2. Calibration, Testing, and Monitoring of Space Solar Cells

<i>E. Fernandez Lisbona</i>	501
1. Introduction	502
2. Calibration of Solar Cells	502
3. Testing of Space Solar Cells and Arrays	506
4. Monitoring of Space Solar Cells and Arrays	514
Acknowledgements	524
References	524

Part IIB Environment

IIB-1. Overview of Potential Hazards

<i>V.M. Fthenakis</i>	533
1. Introduction	533
2. Overview of Hazards in PV Manufacture	534
3. Crystalline Silicon (x-Si) Solar Cells	537
4. Amorphous Silicon (a-Si) Solar Cells	537
5. Cadmium Telluride (CdTe) Solar Cells	539
6. Copper Indium Diselenide (CIS) Solar Cells	540
7. Gallium Arsenide (GaAs) High-Efficiency Solar Cells	541
8. Operation of PV Modules	542
9. Photovoltaic Module Decommissioning	542
10. Conclusion	543
References	544
Editor's Note	545

Part IIC Industry

IIC-1. The Photovoltaic Market

<i>A. Jäger-Waldau</i>	549
1. Asia and the Pacific Region	550
2. Emerging Markets	555
References	563

IIC-2. The Photovoltaic Industry

<i>A. Jäger-Waldau</i>	565
1. Technology Mix	568
2. Solar Cell Production Companies	569
3. Polysilicon Supply	577
4. Polysilicon Manufacturers	579
References	582

APPENDICES

Appendix A	Constants, Physical Quantities and Conversion Factors	587
Appendix B	List of Principal Symbols	589
Appendix C	Abbreviations and Acronyms	595
Appendix D	Useful Web Sites and Journals	601
Appendix E	International Standards with Relevance to Photovoltaics	605
Appendix F	Books About Solar Cells, Photovoltaic Systems, and Applications	611
	Index	615
