

Contents

Preface.....	xi
Acknowledgments	xv
About the Author	xvii
1 Applications throughout the World.....	1
1.1 Introduction	1
1.2 Large Wind: Blades and Rotors.....	1
1.2.1 Key Blade and Rotor Manufacturing Challenges	2
1.3 How Wind Turbines Work.....	2
1.3.1 Types of Wind Turbines	5
1.3.2 Sizes of Wind Turbines	5
1.3.3 Inside the Wind Turbine	5
1.3.4 Contradictory Goals	7
1.3.5 Smooth and Continuous Development	7
1.4 Market for Wind Turbine Composites	8
1.4.1 Introduction	8
1.4.2 Weight and Cost.....	8
1.4.3 Technology Evaluation.....	9
1.4.4 Market and Turbine Components Material Data	9
1.4.4.1 Wind Energy Market Dynamics	9
1.4.4.2 About Owens Corning	10
1.4.4.3 Wind Turbine Database.....	10
1.4.5 Components Development Trends.....	11
1.4.5.1 Rotor Blades	11
1.4.5.2 Gear Boxes.....	11
1.4.5.3 Nacelles.....	13
1.4.5.4 Towers	13
References	13
2 Design Wind Power Turbine.....	15
2.1 Introduction	15
2.2 New Design Concept.....	16
2.3 Rotor Design	17
2.4 Transmission for Wind Turbine Blades	19
2.5 Blades Design	21
2.5.1 Theoretical Investigation	23
2.5.2 Experimental Investigation	26
2.6 Power Control of Wind Turbines	27
2.6.1 Pitch-Controlled Wind Turbines	27
2.6.2 Hydraulic Pitch Control	27

2.6.3	Stall-Controlled Wind Turbines.....	28
2.6.4	Active Stall-Controlled Wind Turbines	28
2.6.5	Individual Pitch Control	29
2.6.6	Other Power Control Methods.....	29
2.7	Wind Turbine Components	29
2.7.1	History	30
2.7.2	Components.....	31
2.7.2.1	Gearbox.....	31
2.7.2.2	Gear Rim and Pinions	31
2.8	Proposal for Robust Redesign Turbine Blades.....	32
2.8.1	Introduction.....	32
2.8.2	Loads Acting Outside Wind Turbine Blades	32
2.8.3	The Automatic 3-Axial Braiding Process	33
2.8.4	Pultrusion Process	34
2.8.5	Shell Curing Mold Prepreg Process	36
2.9	Minimizing the Optimal Number of Shear Webs (Spars) and Their Placement.....	37
2.9.1	Introduction.....	37
2.9.2	Shear Web Analysis	39
2.9.3	Conclusions.....	46
2.10	Skin Stiffness and Thickness Blade Calculation	46
2.10.1	Introduction.....	46
2.10.2	Stiffness Calculation.....	47
2.10.3	Skin Thickness Calculation of Blades	47
2.10.3.1	Experimental Results.....	49
2.11	Deflection of Wind Hybrid Blades.....	50
2.11.1	Experimental Investigation	53
2.11.2	Conclusion	53
	References	53
3	Materials for Turbine Power Blades, Reinforcements, and Resins....	55
3.1	Materials Requirements	55
3.2	Structural Composite Material.....	56
3.3	Resins Advantages: Low Viscosity and Low Curing Time	61
3.4	Rapid Curing Resin System	62
3.5	Reinforced Material: Carbon Fiber and Glass Fiber Fabrics.....	66
3.5.1	Carbon Fibers	66
3.5.2	Twill Weave Kevlar®.....	66
3.5.3	S2-Glass	67
3.5.4	E2-Glass.....	68
3.5.5	Gel Coat.....	69
3.6	Core Materials: Honeycomb Sandwich Structures and Adhesives	70
3.6.1	Introduction.....	70
3.6.2	Core Materials	70

3.7	Material Promises a Better Blade Resistance to Wear and Tear	74
3.7.1	Owens Corning's Ultrablade Fabric Solutions.....	74
3.7.2	Film Layer Protects Wind Turbine Blades against Electromagnetic Fields	75
3.7.3	Painting of Wind Turbines	75
3.8	Field Study of Wind Turbine Blade Erosion.....	76
3.8.1	Introduction.....	76
3.8.2	Field Study and Maintenance	76
3.8.3	Polybutadiene Resins	77
3.8.3.1	Hydroxyl Functionality	77
3.8.3.2	Hydrolytic Stability	78
3.8.3.3	High Hydrophobicity	78
3.8.3.4	Low Temperature Flexibility	79
3.8.3.5	Adhesion Properties	80
3.8.4	AIRTHANE PET-91A-Based Elastomers	80
3.8.5	Conclusion	81
3.9	Rheological Behavior of Flow Resins.....	81
3.9.1	Introduction.....	81
3.9.2	Viscosity	82
3.9.3	Effect of Styrene Contents	82
3.9.4	Effect of Temperature	83
3.9.5	Effect of Molecular Weight.....	84
3.9.6	Relations between the Viscosity, Processing, Temperature, and Glass Transition Temperature.....	85
	References	87
4	Manufacturing Technologies for Turbine Power Blades	89
4.1	Introduction	89
4.2	Wet Hand Lay-Up Process	89
4.3	Filament Winding	90
4.4	Prepreg Technology	92
4.5	Resin Infusion Technology	93
4.6	Out-of-Autoclave Composite Prepreg Process.....	94
4.6.1	Introduction.....	94
4.6.2	Curing Laminates without Autoclave	95
4.6.3	Select Technological Parameters and Cure Conditions.....	96
4.7	Developing Technology for Robust Automation Winding Process	98
4.7.1	Introduction.....	98
4.7.1.1	Fiber Placement Process	98
4.7.1.2	Continuous Molding Prepreg Process	99
4.8	Infusion Molding Process.....	100
4.8.1	Introduction.....	100
4.8.2	Conclusion	106
4.9	Rotational Molding	106

4.9.1	Introduction.....	106
4.9.2	History.....	106
4.9.3	Equipment and Tooling	107
4.9.4	Standard Setup and Equipment for Rotational Molding....	108
4.9.4.1	Rock and Roll Rotating Molding Machines	108
4.9.4.2	Clamshell Machine	108
4.9.4.3	Vertical or Up and Over Rotational Machine	108
4.9.4.4	Shuttle or Swing Arm Machine	108
4.9.4.5	Carousel Machine	109
4.9.5	Production Process	109
4.9.6	Recent Improvements.....	110
4.9.7	Mold Release Agents	111
4.9.8	Materials.....	111
4.9.8.1	Natural Materials	112
4.9.9	Products.....	112
4.9.9.1	Product Design	112
4.9.9.2	Designing for Rotational Molding.....	113
4.9.9.3	Material Limitations and Considerations.....	113
4.9.9.4	Wall Thickness.....	113
4.9.10	Process: Advantages, Limitations, and Material Requirements.....	114
4.9.10.1	Limitations	115
4.9.11	Conclusions.....	115
	References	115
5	Dynamic Strength	119
5.1	Stress and Vibration Analysis of Composite Wind Turbine Blades.....	119
5.1.1	Introduction.....	119
5.2	Stress Analysis of Propeller Blades	119
5.3	Theoretical Investigation	121
5.4	Vibration Analysis	126
5.5	Experimental Analysis.....	132
5.5.1	Conclusions.....	134
5.6	Mechanical Measurements Deformations in Hybrid Turbine Blades.....	134
5.6.1	Introduction.....	134
5.6.2	Strain–Stress Relation	135
5.7	Mechanical and Thermal Properties.....	137
5.7.1	Introduction.....	137
5.7.2	History of Investigating Mechanical Properties	138
5.7.3	Testing Mechanical and Thermal Properties of the Prepreg Laminates.....	139
5.7.4	Conclusions.....	139
5.8	Fatigue Strength and Weibull Analysis.....	141

5.8.1	Introduction	141
5.8.2	Fatigue Strength Prediction	141
5.8.3	Static and Dynamic Fatigue Strength	146
5.8.4	Experimental Investigation	147
5.8.5	Concluding Remarks	149
5.9	Dynamic Analysis: Fourier Function for Prediction of Fatigue Lifecycle Test.....	150
5.9.1	Introduction	150
5.9.2	Theoretical Investigation	151
5.9.3	Experimental Investigation	152
5.9.4	Conclusion	154
5.10	Simulating Dynamics, Durability, and Noise Emission of Wind Turbines	154
5.10.1	Introduction	154
5.10.2	Engineering Challenges.....	154
5.10.3	An Integrated Simulation Process.....	155
5.10.4	Multibody Simulation to Assess Dynamic Behavior	155
5.10.5	Optimizing Overall Durability Performance	157
5.10.6	Complying with Noise Regulations.....	158
5.10.7	Optimizing the Overall Wind Turbine System Behavior	158
5.10.8	Conclusions.....	160
	References	160
6	NDE Digital Methods for Predicting Stiffness and Strength of Wind Turbine Blades	163
6.1	Ultrasonic Nondestructive Method to Determine Modulus of Elasticity of Wind Turbine Blades	163
6.1.1	Introduction	163
6.1.2	Theory and Application of Ultrasonic Method	163
6.1.3	Conclusions.....	171
6.2	Dynamic Local Mechanical and Thermal Strength Prediction Using NDT for Material Parameters Evaluation of Wind Turbine Blades.....	172
6.2.1	Introduction	172
6.2.2	Experimental Investigation Results	178
6.2.3	Concluding Remarks.....	180
6.3	Noncontact Measurement of Delaminating Cracks Predicts the Failure in Hybrid Wind Turbine Blades.....	181
6.3.1	Introduction	181
6.3.2	Damage Mechanisms of Failure	181
6.3.3	Temperature Measurement of the Surface of an FRP.....	183
6.3.4	Fatigue Strength Improvement.....	185
6.3.5	Conclusions.....	185

6.4	Nondestructive Inspection Technologies for Wind Turbine Blades.....	186
6.4.1	Introduction.....	186
6.4.2	Measurement Concept.....	187
6.4.3	Application of the PSP/TSP Technique.....	187
6.4.4	Luminescent Paint Control.....	190
6.4.5	Experimental Investigation.....	193
6.4.6	Concluding Remarks.....	195
	References.....	195
7	Aerodynamic Structural Noise.....	199
7.1	Introduction.....	199
7.2	Wind Turbine Aerodynamics.....	199
7.2.1	Axial Momentum and the Betz Limit.....	199
7.3	Measuring Wind Turbine Noise.....	203
7.4	Reduce Noise in Wind Turbine Blades.....	203
7.5	Sound Emissions, Temperature and Pressure.....	207
7.5.1	Density, Temperature, and Pressure Correlation.....	208
7.5.2	Water Vapor.....	208
7.6	Offshore Support Structures for Power Wind Turbine Blades.....	211
7.6.1	Introduction.....	211
7.6.1.1	Support Structure Design.....	211
7.6.2	Conclusion.....	212
7.6.3	Offshore Wind Initiative.....	212
	References.....	217
	Index.....	219
