<b>Preface</b>	<b>xi</b>
<b>Contributors</b>	<b>xiii</b>
<b>1 Surface Plasmons for Biodetection</b>	<b>1</b>
<i>Pavel Adam, Marek Piliarik, Hana Šípová, Tomáš Špringer, Milan Vala, and Jiří Homola</i>	
1.1 Introduction	1
1.2 Principles of SPR Biosensors	2
1.2.1 Surface Plasmons	2
1.2.2 Excitation of Surface Plasmons	4
1.2.3 Sensors Based on Surface Plasmons	7
1.2.4 SPR Affinity Biosensors	8
1.2.5 Performance Characteristics of SPR Biosensors	9
1.3 Optical Platforms for SPR Sensors	12
1.3.1 Prism-Based SPR Sensors	12
1.3.2 SPR Sensors Based on Grating Couplers	20
1.3.3 SPR Sensors Based on Optical Waveguides	23
1.3.4 Commercial SPR Sensors	25
1.4 Functionalization Methods for SPR Biosensors	26
1.4.1 Functional Layers	27
1.4.2 Attachment of Receptors to Functional Surfaces	29
1.4.3 Molecular Recognition Elements	34
1.5 Applications of SPR Biosensors	35
1.5.1 Detection Formats	35
1.5.2 Medical Diagnostics	36
1.5.3 Environmental Monitoring	36
1.5.4 Food Quality and Safety	38
1.6 Summary	45
References	45

<b>2</b>	<b>Microchip-Based Flow Cytometry in Photonic Sensing: Principles and Applications for Safety and Security Monitoring</b>	<b>59</b>
	<i>Benjamin R. Watts, Zhiyi Zhang, and Chang-Qing Xu</i>	
2.1	Introduction	59
2.2	Microchip-Based Flow Cytometry	61
2.3	Microchip-Based Flow Cytometry with Integrated Optics	66
2.4	Applications	73
2.5	Conclusion	81
	References	83
<b>3</b>	<b>Optofluidic Techniques for the Manipulation of Micro Particles: Principles and Applications to Bioanalyses</b>	<b>89</b>
	<i>Honglei Guo, Gaozhi Xiao, and Jianping Yao</i>	
3.1	Introduction	89
3.2	Optofluidic Techniques for the Manipulation of Particles	90
3.2.1	Fiber-Based Optofluidic Techniques	91
3.2.2	Near-Field Optofluidic Techniques	96
3.2.3	Optical Chromatography Techniques: Axial-Type and Cross-Type	102
3.3	Enhancing Optical Manipulation with a Monolithically Integrated on-Chip Structure	104
3.4	Applications	110
3.5	Conclusion	112
	Acknowledgments	114
	References	114
<b>4</b>	<b>Optical Fiber Sensors and Their Applications for Explosive Detection</b>	<b>119</b>
	<i>Jianjun Ma and Wojtek J. Bock</i>	
4.1	Introduction	119
4.2	A Brief Review of Existing Fiber-Optic-Based Explosive Detectors	123
4.3	High Performance Fiber-Optic Explosive Detector Based on the AFP Thin Film	129
4.3.1	Optimizing Fiber-Optic Explosive Detector Architecture	129
4.3.2	Experimental Demonstration of Fluorescent Quenching Detection and Discussion	130
4.3.3	Unique Advantage of the Optimized Detector—Dramatically Increased Fluorescence Collection through the End-Face-TIR Process	134
4.4	Generating High Quality Polymer Film—Pretreatment with Adhesion Promoter	137

4.5	Effect of Photodegradation on AFP Polymer	138
4.6	Optimizing Polymer Concentration for Optimized AFP-Film Thickness	138
4.7	Explosive Vapor Preconcentration and Delivery	139
4.7.1	Adsorption/Desorption Zone	141
4.7.2	Equilibrium Zone	142
4.7.3	Chromatography Zone	142
4.7.4	Preconditioning Zone	142
4.7.5	Sensing Zone	142
4.8	Future Directions and Conclusions	143
	References	144
<b>5</b>	<b>Photonic Liquid Crystal Fiber Sensors for Safety and Security Monitoring</b>	<b>147</b>
	<i>Tomasz Wolinski</i>	
5.1	Introduction	147
5.2	Materials and Experimental Setups	149
5.3	Principle of Operation	153
5.3.1	Mechanism of Propagation in a PLCF	153
5.3.2	LC Arrangement in PCF	154
5.4	Tuning Possibility	157
5.4.1	Thermal Tuning	157
5.4.2	Electrical Tuning	159
5.4.3	Pressure Tuning	162
5.4.4	Optical Tuning	164
5.4.5	Birefringence Tuning	166
5.5	Photonic Devices	172
5.5.1	Electrically Tuned Phase Shifter	173
5.5.2	Thermally/electrically Tuned Optical Filters	174
5.5.3	Electrically Controlled PLCF-based Polarizer	175
5.5.4	Thermally Tunable Attenuator	175
5.6	Photonic Liquid Crystal Fiber Sensors for Sensing and Security	176
5.7	Conclusion	178
	Acknowledgments	178
	References	179
<b>6</b>	<b>Miniaturized Fiber Bragg Grating Sensor Systems for Potential Air Vehicle Structural Health Monitoring Applications</b>	<b>183</b>
	<i>Honglei Guo, Gaozhi Xiao, Nezih Mrad, and Jianping Yao</i>	
6.1	Introduction	183
6.2	Spectrum Fixed AWG-Based FBG Sensor System	186

6.2.1	Operation Principle	186
6.2.2	Applications	188
6.3	Spectrum Tuning AWG-/EDG-Based FBG Sensor Systems	190
6.3.1	Principle of Spectrum Tuning AWG	191
6.3.2	Applications of Spectrum Tuning PLC	194
6.4	Dual Function EDG-Based Interrogation Unit	215
6.5	Conclusion	219
	Acknowledgments	220
	References	220
<b>7</b>	<b>Optical Coherence Tomography for Document Security and Biometrics</b>	<b>225</b>
	<i>Shoude Chang, Youxin Mao, and Costel Flueraru</i>	
7.1	Introduction	225
7.2	Principle of OCT	229
7.2.1	Coherence Gate	229
7.2.2	Time Domain and Fourier Domain OCT	230
7.2.3	Full-Field OCT (FF-OCT)	232
7.3	OCT Systems: Hardware and Software	233
7.3.1	OCT Systems and Components	233
7.3.2	Algorithms Used in OCT Signal/Image Processing	236
7.4	Sensing Through Volume: Applications	242
7.4.1	Security Data Storage and Retrieval	242
7.4.2	Internal Biometrics for Fingerprint Recognition	244
7.5	Summary and Conclusion	251
	References	252
<b>8</b>	<b>Photonics-Assisted Instantaneous Frequency Measurement</b>	<b>259</b>
	<i>Shilong Pan and Jianping Yao</i>	
8.1	Introduction	259
8.2	Frequency Measurement Using an Optical Channelizer	261
8.2.1	Optical Phased Array WDM	262
8.2.2	Free-Space Diffraction Grating	264
8.2.3	Phase-Shifted Chirped Fiber Bragg Grating Arrays	265
8.2.4	Integrated Optical Bragg Grating Fabry–Perot Etalon	266
8.3	Frequency Measurement Based on Power Monitoring	266
8.3.1	Chromatic-Dispersion-Induced Microwave Power Penalty	267
8.3.2	Break the Lower Frequency Bound	273
8.3.3	IFM Based on Photonic Microwave Filters with Complementary Frequency Responses	277

8.3.4	First-Order Photonic Microwave Differentiator	280
8.3.5	Optical Power Fading Using Optical Filters	284
8.4	Other Methods for Frequency Measurement	287
8.4.1	Fabry–Perot Scanning Receiver	287
8.4.2	Photonic Hilbert Transform	287
8.4.3	Monolithically Integrated EDG	289
8.4.4	Incoherent Frequency-to-Time Mapping	290
8.5	Challenges and Future Prospects	291
8.6	Conclusion	292
	References	292
