Preface	xi
Glossary of Symbols	xiii
1 Introduction	1
1.1 Network-Based Distributed Control System	1
1.2 Graph Theory and Interconnection Topology	4
1.2.1 Basic Definitions	4
1.2.2 Graph Operations	7
1.2.3 Algebraic Graph Theory	10
1.3 Distributed Control Systems	16
1.3.1 End-to-End Congestion Control Systems	16
1.3.2 Consensus-Based Formation Control	22
1.4 Notes and References	25
1.4.1 Graph Theory and Distributed Control Systems	25
1.4.2 Delay in Control and Control by Delay	26
References	26
2 Symmetry, Stability and Scalability	31
2.1 System Model	31
2.1.1 Graph-Based Model of Distributed Control Systems	31
2.1.2 Bipartite Distributed Control Systems	34
2.2 Symmetry in the Frequency Domain	36
2.2.1 Symmetric Systems	36
2.2.2 Symmetry of Bipartite Systems	38
2.3 Stability of Multivariable Systems	39
2.3.1 Poles and Stability	39
2.3.2 Zeros and Pole-Zero Cancellation	41
2.4 Frequency-Domain Criteria of Stability	43
2.4.1 Loop Transformation and Multiplier	44
2.4.2 Multivariable Nyquist Stability Criterion	45
2.4.3 Spectral Radius Theorem and Small-Gain Theorem	50
2.4.4 Positive Realness Theorem	53
2.5 Scalable Stability Criteria	53
2.5.1 Estimation of Spectrum of Complex Matrices	53
2.5.2 Scalable Stability Criteria for Asymmetric Systems	56

2.5.3	Scalable Stability Criteria for Symmetric Systems	60
2.5.4	Robust Stability in Deformity of Symmetry	61
2.6	Notes and References	64
	References	65
3	Scalability in the Frequency Domain	67
3.1	How the Scalability Condition is Related with Frequency Responses	67
3.2	Clockwise Property of Parameterized Curves	71
3.3	Scalability of First-Order Systems	76
3.3.1	Continuous-Time System	76
3.3.2	Discrete-Time System	79
3.4	Scalability of Second-Order Systems	85
3.4.1	System of Type I	85
3.4.2	System of Type II	95
3.5	Frequency-Sweeping Condition	103
3.5.1	Stable Quasi-Polynomials	103
3.5.2	Frequency-Sweeping Test	105
3.6	Notes and References	108
	References	109
4	Congestion Control: Model and Algorithms	111
4.1	An Introduction to Congestion Control	111
4.1.1	Congestion Collapse	112
4.1.2	Efficiency and Fairness	114
4.1.3	Optimization-Based Resource Allocation	114
4.2	Distributed Congestion Control Algorithms	116
4.2.1	Penalty Function Approach and Primal Algorithm	116
4.2.2	Dual Approach and Dual Algorithm	117
4.2.3	Primal-Dual Algorithm	118
4.2.4	REM: A Second-Order Dual Algorithm	118
4.3	A General Model of Congestion Control Systems	119
4.3.1	Framework of End-to-End Congestion Control under Diverse Round-Trip Delays	119
4.3.2	General Primal-Dual Algorithm	122
4.3.3	Frequency-Domain Symmetry of Congestion Control Systems	124
4.4	Notes and References	126
	References	127
5	Congestion Control: Stability and Scalability	129
5.1	Stability of the Primal Algorithm	129
5.1.1	Johari-Tan Conjecture	129
5.1.2	Scalable Stability Criterion for Discrete-Time Systems	131
5.1.3	Scalable Stability Criterion for Continuous-Time Systems	135
5.2	Stability of REM	138
5.2.1	Scalable Stability Criteria	138

5.2.2	Dual Algorithm: the First-Order Limit Form of REM	145
5.2.3	Design of Parameters of REM	146
5.3	Stability of the Primal-Dual Algorithm	152
5.3.1	Scalable Stability Criteria	152
5.3.2	Proof of the Stability Criteria	161
5.4	Time-Delayed Feedback Control	163
5.4.1	Time-Delayed State as a Reference	163
5.4.2	TDFC for Stabilization of an Unknown Equilibrium	165
5.4.3	Limitation of TDFC in Stabilization	166
5.5	Stabilization of Congestion Control Systems by Time-Delayed Feedback Control	170
5.5.1	Introduction of TDFC into Distributed Congestion Control Systems	170
5.5.2	Stabilizability under TDFC	171
5.5.3	Design of TDFC with Commensurate Self-Delays	181
5.6	Notes and References	188
5.6.1	Stability of Congestion Control with Propagation Delays	188
5.6.2	Time-Delayed Feedback Control	189
	References	190
6	Consensus in Homogeneous Multi-Agent Systems	193
6.1	Introduction to Consensus Problem	193
6.1.1	Integrator Agent System	193
6.1.2	Existence of Consensus Solution	194
6.1.3	Consensus as a Stability Problem	194
6.1.4	Discrete-Time Systems	195
6.1.5	Consentability	195
6.2	Second-Order Agent System	196
6.2.1	Consensus and Stability	196
6.2.2	Consensus and Consentability Condition	199
6.2.3	Periodic Consensus Solutions	203
6.2.4	Simulation Study	204
6.3	High-Order Agent System	206
6.3.1	System Model	206
6.3.2	Consensus Condition	208
6.3.3	Consentability	211
6.4	Notes and References	216
	References	217
7	Consensus in Heterogeneous Multi-Agent Systems	219
7.1	Integrator Agent System with Diverse Input and Communication Delays	219
7.1.1	Consensus in Discrete-Time Systems	220
7.1.2	Consensus under Diverse Input Delays	221
7.1.3	Consensus under Diverse Communication Delays and Input Delays	224
7.1.4	Continuous-Time System	229
7.1.5	Simulation Study	230

7.2	Double Integrator System with Diverse Input Delays and Interconnection Uncertainties	233
7.2.1	Leader-Following Consensus Algorithm	233
7.2.2	Consensus Condition under Symmetric Coupling Weights	235
7.2.3	Robust Consensus under Asymmetric Perturbations	238
7.2.4	Simulation Study	240
7.3	High-Order Consensus in High-Order Systems	243
7.3.1	System Model	243
7.3.2	Consensus Condition	245
7.3.3	Existence of High-Order Consensus Solutions	249
7.3.4	Constant Consensus	252
7.3.5	Consensus in Ideal Networks	254
7.4	Integrator-Chain Systems with Diverse Communication Delays	255
7.4.1	Matching Condition for Self-Delay	255
7.4.2	Adaptive Adjustment of Self-Delay	255
7.4.3	Simulation Study	257
7.5	Notes and References	265
	References	266
