Preface	xv
1 Introduction	1
1.1 Introduction	3
1.2 Typical Machine Applications	5
1.3 General Machine Configuration	5
1.4 Conclusion	7
Bibliography	8
2 Fluid Properties	9
2.1 Introduction	11
2.2 Fluid Bulk Modulus	11
2.2.1 General	11
2.2.2 Bulk Modulus for a Liquid	12
2.2.3 Bulk Modulus for a Gas	13
2.2.4 Effective Bulk Modulus	13
2.2.5 Summary	15
2.3 Fluid Viscosity	15
2.3.1 General	15
2.3.2 Viscosity Charts	16
2.3.3 Viscosity Approximations	17
2.3.4 Recommended Viscosities	18
2.3.5 Summary	19
2.4 Conclusion	19
Bibliography	19
3 Fluid Mechanics	21
3.1 Introduction	23
3.2 The Reynolds Equation	24
3.2.1 General	24
3.2.2 Fundamental Equation	24
3.2.3 Linear Flow Conditions	25
3.2.4 Radial Flow Conditions	26
3.2.5 Summary	27
3.3 The Bernoulli Equation	28
3.3.1 General	28
3.3.2 Fundamental Equation	28
3.3.3 Bernoulli Flow Conditions	29
3.3.4 Summary	30

Contents

3.4 Conclusion	31
Bibliography	31
4 Mechanical Analysis	33
4.1 Introduction	35
4.2 Cylinder-Block Free-Body Diagram	36
4.2.1 General	36
4.2.2 Time Rate-of-Change of Cylinder-Block Momentum	38
4.2.3 Cylinder-Block Spring Force	38
4.2.4 Shaft Reaction	39
4.2.5 Valve-Plate Reaction	39
4.2.6 Pressure-Clamping Force	40
4.2.7 Piston Reaction	40
4.2.8 Summary	42
4.3 Piston Free-Body Diagram	43
4.3.1 General	43
4.3.2 Time Rate-of-Change of Piston Momentum	44
4.3.3 Slipper Reaction	44
4.3.4 Piston-Bore Pressure Force	45
4.3.5 Cylinder-Block Reaction	45
4.3.6 Summary	47
4.4 Slipper Free-Body Diagram	48
4.4.1 General	48
4.4.2 Time Rate-of-Change of Slipper Momentum	49
4.4.3 Slipper Hold-Down Force	49
4.4.4 Swash-Plate Reaction	51
4.4.5 Slipper-Balance Force	52
4.4.6 Piston Reaction	54
4.4.7 Summary	54
4.5 Swash-Plate Free-Body Diagram	55
4.5.1 General	55
4.5.2 Time Rate-of-Change of Swash-Plate Momentum	56
4.5.3 Slipper Reaction	57
4.5.4 Slipper-Balance Force	58
4.5.5 Control and Containment Forces	58
4.5.6 Summary	59
4.6 Shaft Free-Body Diagram	59
4.6.1 General	59
4.6.2 Time Rate-of-Change of Shaft Momentum	60
4.6.3 Left Bearing Force	61

4.6.4	Right Bearing Force	61
4.6.5	Cylinder-Block Reaction	62
4.6.6	Cylinder-Block Spring Force	62
4.6.7	External Forces	63
4.6.8	Summary	64
4.7	Kinematics of the Piston-Slipper Ball Joint ...	64
4.7.1	General	64
4.7.2	Motion in the X-Direction	65
4.7.3	Motion in the Y-Direction	66
4.7.4	Motion in the Z-Direction	66
4.7.5	Summary	67
4.8	Symmetry Considerations	67
4.9	Analytical Results	67
4.9.1	General	67
4.9.2	Cylinder-Block Equations	68
4.9.3	Piston Equations	69
4.9.4	Slipper Equations	70
4.9.5	Swash-Plate Equations	71
4.9.6	Shaft Equations	73
4.9.7	Summary	73
4.10	Conclusion	74
Bibliography		74
5	Piston Pressure	75
5.1	Introduction	77
5.2	Control-Volume Analysis	77
5.3	Numerical Solutions	79
5.4	Piston-Pressure Profile	81
5.5	Pressure Carry-Over Angle	82
5.6	Cumulative Pressure Effects	84
5.7	Conclusion	85
Bibliography		85
6	Steady-State Results	87
6.1	Introduction	89
6.2	Cylinder-Block Equations	90
6.3	Piston Equations	95
6.4	Slipper Equations	97
6.5	Swash-Plate Equations	99
6.6	Shaft Equations	101
6.7	Conclusion	103
Bibliography		104
7	Machine Efficiency	105
7.1	Introduction	107
7.2	Internal Friction	108

Contents

7.3	Volumetric Flow Consideration	109
7.4	Pump Efficiency	111
7.5	Motor Efficiency	113
7.6	Typical Results	115
7.7	Conclusion	120
	Bibliography	121
8	Designing a Cylinder Block	123
8.1	Introduction	125
8.2	Cylinder-Block Geometry	125
8.3	Cylinder-Block Materials	126
8.4	Number of Pistons	128
8.4.1	General	128
8.4.2	Idealized Flow	128
8.4.3	Non-Idealized Flow	133
8.4.4	Summary	135
8.5	Cylinder-Block Layout	135
8.6	Involute Spline Design	137
8.7	Cylinder-Block Balance	141
8.8	Cylinder-Block/Valve-Plate Leakage	145
8.9	Cylinder-Block Tipping	145
8.10	Cylinder-Block Filling	147
8.11	Conclusion	150
	Bibliography	150
9	Designing a Valve Plate	151
9.1	Introduction	153
9.2	Valve-Plate Geometry	153
9.3	Valve-Plate Materials	155
9.4	Sizing Valve-Plate Slots	157
9.4.1	General	157
9.4.2	Constant Area Slots	159
9.4.3	Linearly Varying Slots	162
9.4.4	Quadratically Varying Slots	164
9.4.5	Summary	165
9.5	Checking for Cavitation Potential	166
9.5.1	General	166
9.5.2	Constant Area Slots	169
9.5.3	Linearly Varying Slots	171
9.5.4	Quadratically Varying Slots	172
9.5.5	No Slot Geometry	173
9.5.6	Summary	175
9.6	Line-to-Line Porting	176
9.7	Cross Porting	179
9.8	Trapped Volume Designs	182

9.9	Valve-Plate Indexing	186
9.10	Valve-Plate Clamping	189
9.11	Conclusion	190
	Bibliography	191
10	Designing a Piston	193
10.1	Introduction	195
10.2	Piston Geometry	195
10.3	Piston Materials	197
10.4	Piston Stress and Radial Deflection	197
10.4.1	General	197
10.4.2	Stress and Point A	199
10.4.3	Stress at Point B	201
10.4.4	Required Material Strength	202
10.4.5	Radial Piston Deflection	205
10.4.6	Summary	205
10.5	Piston-Length Ratios	205
10.6	Miscellaneous Design Practices	206
10.7	Piston Lubrication	206
10.8	Piston Leakage	208
10.9	Conclusion	208
	Bibliography	209
11	Designing a Slipper	211
11.1	Introduction	213
11.2	Slipper Geometry	213
11.3	Slipper Materials	214
11.4	Slipper Stresses	214
11.5	Slipper Design Practices	214
11.6	Slipper Balance	215
11.7	Slipper Leakage	217
11.8	Slipper Tipping	218
11.9	Slipper Hold-Down Devices	218
11.10	Conclusion	220
	Bibliography	220
12	Designing a Swash Plate	221
12.1	Introduction	223
12.2	Swash-Plate Geometry	223
12.3	Swash-Plate Materials	224
12.4	Swash-Plate Stresses	224
12.5	Control and Containment Forces	225
12.5.1	General	225
12.5.2	A Transverse-Servo Design	226
12.5.3	An Axial-Servo Design	229
12.5.4	Summary	232

Contents

12.6	Swash-Plate Bearings	234
12.7	Conclusion	234
	Bibliography	235
13	Designing a Shaft	237
13.1	Introduction	239
13.2	Shaft Geometry	239
13.3	Shaft Materials	240
13.4	Shaft Deflection	240
13.5	Shaft Stress	244
13.6	Shaft Bearings	246
13.7	Conclusion	247
	Bibliography	247
14	Displacement Controlled Pumps	249
14.1	Introduction	251
14.2	Pump Description	251
14.3	Analysis	253
14.3.1	General	253
14.3.2	Swash-Plate Equilibrium	253
14.3.3	Discharge Pressure	255
14.3.4	Actuator Pressures	256
14.3.5	4-Way Valve Flow	257
14.3.6	Summary	258
14.4	Dynamic Performance	259
14.4.1	General	259
14.4.2	Time Constant	259
14.4.3	Time Response	260
14.4.4	Bandwidth Frequency	261
14.4.5	Summary	261
14.5	Design	262
14.5.1	General	262
14.5.2	Captured Actuator-Spring Design	262
14.5.3	Actuator Design	263
14.5.4	Dynamic Response Design	264
14.5.5	Summary	265
14.6	Conclusion	265
	Bibliography	265
15	Pressure Controlled Pumps	267
15.1	Introduction	269
15.2	Pump Description	269
15.3	Analysis	271
15.3.1	General	271
15.3.2	Discharge Pressure	271

Contents

15.3.3	Swash-Plate Equilibrium	273
15.3.4	Actuator Pressures	274
15.3.5	3-Way Valve Flow	275
15.3.6	3-Way Valve Equilibrium	277
15.3.7	Summary	279
15.4	Dynamic Performance	280
15.4.1	General	280
15.4.2	Natural Frequency and Damping Ratio	281
15.4.3	Time Response	282
15.4.4	Bandwidth Frequency	284
15.4.5	Summary	286
15.5	Design	286
15.5.1	General	286
15.5.2	Bias-Spring Design	286
15.5.3	Actuator Design	287
15.5.4	Dynamic Response Design	288
15.5.5	Summary	288
15.6	Conclusion	289
	Bibliography	289
16	Conclusion	291
	Unit Conversions	295
	Selected References	297
	Index	301
