

TABLE OF CONTENTS

Chapter 1	The Basis for Remediation Process Design and Cost Estimating.....	1
1.1	The Importance of Cost Analysis.....	1
1.2	Natural Attenuation.....	3
1.3	Selecting Among Competing Remediation Methods	4
1.3.1	Listing the process options	4
1.3.2	Comparing process options	10
1.3.3	Defining and evaluating alternative treatment trains	28
1.4	The Approach to Process Design and Cost Estimating	32
Chapter 2	Process and Conceptual Design of Remediation Systems	35
2.1	Basic Principles.....	36
2.2	Feasibility Studies and Work Plans	37
2.2.1	Feasibility Study Alternatives	37
2.2.2	Work Plans, Corrective Action Plans, Remedial Action Plans	38
2.2.3	Informal Studies, CERCLA Studies And Records Of Decision, RCRA Studies	38
2.2.4	The Observational Approach	39
2.3	Treatability Studies	40
2.4	Process Flow Diagram.....	42
2.4.1	Main Parameters and Mass Balance	42
2.4.2	Energy Balance	43
2.4.3	Sizing and Rating of Equipment	44
2.5	Site Plan and Preliminary Plot Plan	44
2.6	P&ID and Sequence of Operations.....	46
2.6.1	P&ID Development	46
2.6.2	Pressure Instrumentation	50
2.6.3	Liquid Level Instrumentation.....	51
2.6.4	Temperature Instrumentation	53
2.6.5	Flow Instrumentation.....	55
2.6.6	Analysis Instrumentation.....	57
2.6.7	Sequence of Operations Development.....	57
2.7	Logic Diagrams.....	57
2.8	Computerized Controls and Process Monitoring.....	59
2.8.1	Computer Functions	60
2.8.1.1	Adapting Computers	60
2.8.1.2	Data Manipulation	60
2.8.1.3	Adapting Computers to On/Off Control Function.....	60
2.8.1.4	Graphic Displays	61
2.8.1.5	Automatic Restart, Supervisory Control, and Combination Systems.....	61

2.8.2	Remote Monitoring.....	62
2.8.2.1	Computer-Based Systems.....	62
2.8.2.2	Phone Dialers.....	62
2.8.2.3	Computer/Fax.....	63
2.9	Design Basis, Tradeoff Analysis, and Preliminary Specifications.....	63
2.9.1	Preliminary Specifications.....	65
2.9.2	Conceptual Design Report.....	66

Chapter 3	Metals Removal from Groundwater	69
3.1	Basic Principles.....	70
3.1.1	Chemical Precipitation Basics.....	70
3.1.2	Membrane Separation Basics for Dissolved Ions.....	71
3.1.3	Ion Exchange Basics.....	71
3.1.4	Adsorption Basics.....	72
3.1.5	Evaporation Basics.....	73
3.2	Chemical Precipitation.....	73
3.2.1	Alkaline Precipitation.....	73
3.2.2	Sulfide Precipitation.....	75
3.2.3	Precipitation with Iron.....	75
3.2.4	Precipitation Examples.....	75
3.2.4.1	Iron, Manganese and Calcium Removal.....	75
3.2.4.2	Chromium.....	76
3.2.4.3	Mercury.....	78
3.2.4.4	Arsenic.....	79
3.2.5	Alternatives to Conventional Clarification.....	79
3.3	Membrane Separation for Dissolved Ions.....	79
3.4	Ion Exchange.....	81
3.4.1	Ion Exchange for Nitrates And Chromate.....	81
3.4.2	Ion Exchange for Radionuclides.....	82
3.5	Adsorption.....	82
3.6	Forced Evaporation.....	83
3.7	Main System Design Parameters.....	84
3.7.1	Sizing and Rating of Major Equipment.....	84
3.7.2	Conceptual and Process Design.....	91
3.7.3	Controls.....	93
3.7.4	Utilities Requirements.....	94
3.8	Treatability Studies for Metal Removal.....	94
3.8.1	Treatability Studies for Precipitation and Prediction of Treated Effluent Concentrations.....	94
3.8.2	Treatability Studies for Reverse Osmosis.....	96
3.8.3	Treatability Studies for Ion Exchange and Adsorbent Systems.....	97
3.8.4	Treatability Studies for Evaporation.....	99
3.9	Cost Estimating for Metals Removal.....	99
3.10	Summary of Important Points for Metals Removal.....	106

Chapter 4	Groundwater Remediation Using Carbon Adsorption	109
4.1	Basic Principles of Carbon Adsorption	109
4.2	Adsorption Isotherms	111
4.3	Methods of Determining Adsorptive Capacity	113
4.4	Breakthrough Curves	113
4.5	Sizing of Carbon Beds and Duration of Bed Life	114
4.6	Arrangements and Performance of Organic Adsorption Systems	118
4.6.1	Prestripping	118
4.6.2	Prefiltering and Preventing Overpressure	118
4.6.3	Improving Performance with Three-Stage Adsorption	119
4.6.4	Presoaking and Backwashing	120
4.6.5	Lower Explosive Limit (LEL) monitoring for Breakthrough	120
4.7	Main System Design Parameters	122
4.7.1	Concept and Process Design	125
4.7.2	Sizing and Rating of Major Equipment	127
4.7.3	Controls	127
4.7.4	Utilities Requirements	127
4.8	Aqueous Phase Adsorption Treatability Studies	128
4.9	Cost Estimating	131
4.10	Summary of Important Points for Carbon Adsorption	134
Chapter 5	Stripping of Groundwater	137
5.1	Basic Principles of Stripping	137
5.1.1	Use of Polishing Carbon	138
5.1.2	The Design Problem	140
5.2	Packed Strippers	144
5.2.1	Packing Depth and A/W (or G/L) Ratio	144
5.2.2	Packed Strippers – Pressure Drop and Cross-Sectional Area	148
5.2.3	Packed Strippers – Computer Applications	149
5.3	Alternatives to Packed Towers	150
5.3.1	Tray Designs	150
5.3.2	Aeration Chambers	151
5.3.3	Cooling Towers Used as Air Strippers	151
5.3.4	In Situ Air Stripping (In-Well Stripping and Air Sparging)	152
5.4	Blower Arrangements and Mist Separation	154
5.5	Turndown and Liquid Distribution	156
5.6	Recycled Strippers	157
5.7	Heated Strippers	158
5.8	Emission Abatement	160
5.8.1	Carbon Adsorption	161
5.8.2	Regenerating Vapor-Phase Activated Carbon	163
5.8.3	Direct Thermal Oxidizers	164
5.8.4	Catalytic Oxidizers	165
5.8.5	Auxiliary Fuel Consumption and Heat Exchange	166

5.9	Main System Design Parameters	169
5.9.1	Concept and Process Design	169
5.9.2	Sizing and Rating of Major Equipment	175
5.9.3	Controls	177
5.9.4	Utilities Requirements	178
5.10	Treatability Studies for Groundwater Stripping	179
5.11	Cost Estimating for Groundwater Stripping	179
5.11.1	Equipment Costs	179
5.11.2	Operating Costs and Total Costs	180
5.11.3	Emission Abatement Costs	180
5.11.4	Software for Stripping Process Design and Cost Estimating	182
5.12	Summary of Important Points for Groundwater Stripping	184

Chapter 6 Aqueous Chemical Oxidation189

6.1	Basic Principles	189
6.1.1	Ranking of Oxidants and UV Oxidation Power Consumption	189
6.1.2	Ultraviolet Light	189
6.1.3	Emerging Technology Using Electrochemical Oxidation	190
6.2	Wet Air and Supercritical Water Oxidation	191
6.3	Fenton's Reagent	193
6.4	UV Light with Oxidants	193
6.5	Main System Design Parameters	195
6.6	Treatability Studies for Aqueous Oxidation	198
6.7	Costs for Aqueous Oxidation	199
6.8	Summary of Important Points for Aqueous Chemical Oxidation	201

Chapter 7 Bioremediation Systems203

7.1	Basic Principles	203
7.1.1	Microbial Metabolism	205
7.1.2	System Environmental Requirements	207
7.1.2.1	Microbial Populations	207
7.1.2.2	Oxygen	207
7.1.2.3	Soil Water	209
7.1.2.4	pH	209
7.1.2.5	Nutrients	209
7.1.2.6	Temperature	211
7.1.2.7	Toxicants in Waste	212
7.1.3	In Situ Versus Ex Situ Treatment	212
7.1.4	Bioaugmentation Versus Bioacclimation	215
7.2	Aqueous Phase Treatment	217
7.2.1	Ex Situ Treatment	217
7.2.1.1	Suspended Growth Systems	217
7.2.1.1.1	Reactor configurations	219
7.2.1.1.2	Design parameters	221
7.2.1.2	Fixed-Film Systems	222

	7.2.1.2.1	Reactor configurations	223
	7.2.1.2.2	Denitrification reactors	224
7.2.2	In Situ Treatment		226
	7.2.2.1	Raymond Process	226
	7.2.2.1.1	Use of alternatives to air to supply electron acceptors.....	228
	7.2.2.1.2	Use of alternative injection systems.....	230
	7.2.2.1.3	Process limitations	231
	7.2.2.1.4	In situ biodenitrification.....	232
	7.2.2.2	Natural Attenuation	232
	7.2.2.2.1	Principles of operation	232
	7.2.2.2.2	Process design principles.....	233
	7.2.2.2.3	Determination of steady-state plume conditions	233
	7.2.2.2.4	Estimation of contaminant degradation rates	239
	7.2.2.2.5	Estimation of source mass and source lifetime	249
	7.2.2.2.6	Predicting the long-term behavior of the dissolved plume	255
	7.2.2.2.7	Decision making regarding natural attenuation	256
	7.2.2.2.8	Long-term monitoring	259
7.3	Solid Phase Biological Treatment.....		261
	7.3.1	Ex Situ Treatment	261
	7.3.1.1	Land Treatment Systems.....	261
	7.3.1.1.1	Application-limited contaminant loading	262
	7.3.1.1.2	Rate-limiting contaminant loading.....	263
	7.3.1.1.3	Capacity-limiting contaminant loading	263
	7.3.1.1.4	Process configuration.....	264
	7.3.1.1.5	Process design	265
	7.3.1.1.6	Process operations.....	267
	7.3.1.1.7	Process design calculations	267
	7.3.1.2	Soil Piles	270
	7.3.1.2.1	Process configuration.....	271
	7.3.1.2.2	Process design	272
	7.3.1.2.3	Process operation	273
	7.3.1.2.4	Composting	274
	7.3.1.2.5	Process design case study	276
	7.3.1.3	Slurry Reactors	280
	7.3.1.3.1	Process design	282
	7.3.1.3.2	Process operation	283
7.3.2	In Situ Treatment		285
	7.3.2.1	Bioventing.....	285
	7.3.2.1.1	Process design	287

	7.3.2.1.2	Process operation	301
	7.3.2.2	Bioslurping.....	304
	7.3.2.2.1	Process design	304
	7.3.2.2.2	Process operation	308
7.4		Treatability Studies for Bioremediation Systems.....	310
	7.4.1	Treatability Studies Applicable to Aqueous Phase Treatment	312
	7.4.2	Treatability Studies Applicable to Solid Phase Systems	312
	7.4.2.1	Land Treatment Systems.....	312
	7.4.2.2	Soil Piles	313
	7.4.2.3	Slurry-Phase Reactors	314
	7.4.2.4	Bioventing.....	314
	7.4.2.5	Bioslurping.....	314
7.5		Cost-Estimating for Bioremediation Systems.....	315
	7.5.1	Costs for Aqueous Phase Treatment.....	315
	7.5.1.1	Costs from Case Histories.....	315
	7.5.1.2	Computer programs for Process Design and Cost Estimating	316
	7.5.2	Costs for Solid Phase Treatment	320
	7.5.2.1	Land Treatment Systems.....	321
	7.5.2.2	Soil Piles	322
	7.5.2.3	Slurry-Phase Reactors	322
	7.5.2.4	Bioventing.....	324
	7.5.2.5	Bioslurping.....	327
7.6		Summary of Important Points for Bioremediation.....	327

Chapter 8		Soil Venting.....	333
	8.1	Basic Principles of Soil Venting	334
	8.2	Inducing Vacuum.....	337
	8.2.1	Vacuum Blowers	337
	8.2.2	Internal Combustion Engines (ICEs).....	340
	8.2.3	Passive Soil Venting	341
	8.3	Vapor Treatment and Discharge	341
	8.3.1	Adsorption.....	343
	8.3.2	Oxidizers	344
	8.4	Main System Design Parameters	346
	8.4.1	Pneumatic testing.....	346
	8.4.2	Radius of Influence of Extraction Wells and Soil Air Permeability	347
	8.4.3	Volumetric Air Flow and Contaminant Mass Removal Rate	352
	8.4.4	Ventilation wells	354
	8.5	Treatability Studies for Soil Venting	354
	8.6	Cost Estimating for Soil Venting	355
	8.6.1	Utilities Costs	361
	8.6.2	Carbon Adsorption Costs	361
	8.6.3	Software for Soil Venting Process Design and Cost Estimating.....	362

8.7	Summary of Important Points for Soil Venting	363
Chapter 9	Thermal Treatment for Soils and Sludges	367
9.1	Basic Principles.....	367
9.1.1	Incineration Basics.....	367
9.1.2	Low-Temperature Thermal Desorption Basics.....	370
9.1.3	Heat Recovery.....	373
9.2	Incinerators.....	373
9.2.1	Rotary kilns	373
9.2.1.1	Features	374
9.2.1.2	Oxygen Lancing and Oxygen Enrichment.....	375
9.2.2	Fluidized CBCs.....	375
9.2.3	Infrared Furnace Systems	378
9.3	Thermal Desorbers.....	379
9.4	Handling of Feed and of Treated Soils	380
9.5	Air Pollution Control	380
9.5.1	Use of Afterburners (Thermal Oxidizers).....	380
9.5.2	Recovery of Organic Fluids from Indirect-Fired Desorbers.....	381
9.5.3	Abatement of Particulate Emissions and Acid Gases	382
9.5.4	Emissions of NO _x	388
9.5.5	CO Emissions.....	389
9.6	Main System Design Parameters for Thermal Treatment	390
9.6.1	Characterization of the “Waste” for Thermal Treatment.....	391
9.6.2	Vapor Pressure Considerations for Thermal Desorbers.....	392
9.6.3	Examples of Design Calculations	395
9.6.4	Contaminant Destruction Efficiency and Emission Limitations	401
9.6.5	Limitations on Particulate Emissions and Plume Opacity Correlations	402
9.6.5.1	Plume Opacity	403
9.6.5.2	Emissions Source Testing	406
9.6.6	Baghouse Design Parameters.....	406
9.6.7	Wet Scrubber Power Requirements.....	407
9.6.8	Design of Vertical Packed Acid Gas Scrubbers.....	409
9.6.9	Venturi Scrubber Design Parameters.....	411
9.7	Treatability Studies and Trial Burns	412
9.7.1	Testing Thermal Desorption from Soils	413
9.7.2	Trial Burns.....	414
9.8	Cost Estimating for Thermal Soil Treatment	415
9.8.1	Incineration Costs	415
9.8.1.1	Incineration Costs per Ton	415
9.8.1.2	Computerized Cost Estimating for Incineration	416
9.8.2	Desorption Costs.....	417
9.8.2.1	Desorption Costs per Ton or per Cubic Yard.....	417
9.8.2.2	Computerized Equipment Sizing and Cost Estimating for Desorption.....	420

9.8.3	Total Project Costs for Ex Situ Soil Remediation.....	421
9.9	Summary of Important Points for Thermal Desorption.....	422
Chapter 10	Soil Washing.....	427
10.1	Basic Principles of Soil Washing.....	428
10.2	In Situ Soil Flushing.....	430
10.3	Soil Washing and Solvent Extraction.....	432
10.3.1	Aqueous Soil Washing for Particle Size Separation.....	435
10.3.2	Solvent Extraction for Removing Organic Contaminants.....	437
10.4	Main System Design Parameters for Soil Washing.....	440
10.4.1	Conceptual Designs.....	440
10.4.2	Mass Balances.....	441
10.4.3	Treatment of Wash Water.....	448
10.5	Treatability Studies for Soil Washing.....	453
10.6	Cost Estimating for Soil Washing.....	456
10.7	Summary of Important Points for Soil Washing.....	458
Chapter 11	Stabilization and Solidification.....	461
11.1	Basic Principles for Stabilization and Solidification.....	461
11.2	In Situ Applications and Area Mixing.....	462
11.3	Microencapsulation.....	463
11.3.1	Cement/Pozzolanic (Siliceous) Solidifiers.....	463
11.3.2	Thermoplastic Agents.....	465
11.4	Silicate Sorbents.....	466
11.5	Main System Design Parameters.....	466
11.6	Treatability Studies for Stabilization and Solidification.....	467
11.7	Cost Estimating for Stabilization and Solidification.....	470
11.8	Summary of Important Points for Stabilization and Solidification.....	475
Chapter 12	Cost Estimating and Life Cycle Analysis.....	477
12.1	Basic Principles.....	477
12.2	Investment Costs.....	478
12.2.1	Preliminary Estimates for Investment Cost.....	478
12.2.1.1	Ratifying Costs with Exponents.....	478
12.2.1.2	Factoring Costs of Principal Equipment.....	480
12.2.2	Definitive Estimating of Investment Cost.....	483
12.2.2.1	Associated Costs.....	484
12.2.2.2	Engineering Design Costs.....	484
12.3	Estimating Annual Expenses.....	485
12.3.1	Utilities Consumption.....	485
12.3.2	Operating Labor and Overhead.....	488
12.3.3	Maintenance Expense.....	489
12.3.4	Chemicals, Adsorbents, and Supplies.....	489
12.3.5	Property Taxes and Insurance.....	490
12.3.6	Monitoring and Reporting.....	490
12.3.7	Other Direct Costs.....	491
12.4	Computer Applications to Cost Estimating.....	492

12.5	Life Cycle Analysis	493
12.5.1	Investment, Expense, Closure and Post-Closure Costs	494
12.5.2	Present value Factors	495
12.6	Summary of Important Points for Cost Estimating	497
Appendix 12-A	Investment Costs and Yearly Expense Example	500
