Foreword	vii
Contributors	ix
Chapter 1 The case for microbiological research and development ...	1
<i>Paul A. Gibbs, Peter J. Taormina, and Evangelia Komitopoulou</i>	
Chapter 2 Building research and development capabilities.....	19
<i>Peter J. Taormina</i>	
Chapter 3 Food process validations	45
<i>Margaret D. Hardin</i>	
Chapter 4 Food product validations.....	83
<i>Peter J. Taormina</i>	
Chapter 5 Competitive research and development on antimicrobials and food preservatives.....	109
<i>Keila L. Perez, T. Matthew Taylor, and Peter J. Taormina</i>	
Chapter 6 Competitive research and development on food-processing sanitizers and biocides.....	161
<i>Junzhong Li and Scott L. Burnett</i>	
Chapter 7 Research during microbial food safety emergencies and contaminant investigations	185
<i>Jeffrey L. Kornacki</i>	
Chapter 8 Predictive modeling: Principles and practice	203
<i>Peter Wareing and Evangelia Komitopoulou</i>	
Chapter 9 Detection and identification of bacterial pathogens in food using biochemical and immunological assays... 229	
<i>Hari P. Dwivedi, Patricia Rule, and John C. Mills</i>	

Chapter 10 Microbiological growth-based and luminescence methods of food analysis	269
<i>Ruth Eden and Gerard Ruth</i>	
Chapter 11 Nucleic acid-based methods for detection of foodborne pathogens	291
<i>Bledar Bisha and Lawrence Goodridge</i>	
Chapter 12 Reporting food microbiology research outcomes	315
<i>Mark Carter</i>	
Index	327
