|------------------------------------------------------------------------------------|-----------|
| Series Editor's Note.....                                                          | xi        |
| About the Author .....                                                             | xiii      |
| Acknowledgments .....                                                              | xv        |
| Introduction .....                                                                 | xvii      |
| <br>                                                                               |           |
| <b>1. Global Warming and Ecological Degradation.....</b>                           | <b>1</b>  |
| 1.1 Emergence of the Anthropocene .....                                            | 1         |
| 1.1.1 Ecological Constraints.....                                                  | 3         |
| 1.2 Climate Change as Context .....                                                | 5         |
| 1.2.1 Climate Inertia .....                                                        | 8         |
| 1.3 An Overview of Climate Change Evidence .....                                   | 9         |
| 1.3.1 Natural Factors and Denial .....                                             | 14        |
| 1.3.2 Uncertainties Remain.....                                                    | 15        |
| 1.3.3 The Relative Impact of Natural and Anthropogenic<br>Factors.....             | 17        |
| 1.3.4 Long-Term Cycles and Rate of Warming.....                                    | 19        |
| 1.4 CO <sub>2</sub> and Radiative Forcing .....                                    | 22        |
| 1.4.1 Human Impacts Recently Overwhelmed Natural<br>Factors.....                   | 24        |
| 1.4.2 Radiative Forcing.....                                                       | 25        |
| 1.4.3 The Paradox of Aerosols .....                                                | 28        |
| 1.5 Climate Sensitivity: The Likely Extent and Rate of Warming.....                | 29        |
| 1.5.1 The Uses and Limitations of Climate Models .....                             | 32        |
| 1.6 The Ecosystem Impacts of Global Warming and Related<br>Ecological Crises ..... | 35        |
| 1.6.1 Marine Ecosystems.....                                                       | 36        |
| 1.6.2 Terrestrial Ecosystems and Complex Ecological<br>Interactions .....          | 38        |
| 1.6.3 Ecological Change at the Poles.....                                          | 43        |
| 1.6.4 Vector-Borne Disease and Beetle Population<br>Explosions.....                | 44        |
| 1.6.5 Biodiversity Loss.....                                                       | 46        |
| 1.7 Prelude to a Strategy .....                                                    | 49        |
| References .....                                                                   | 51        |
| <br>                                                                               |           |
| <b>2. The Global Carbon Cycle and Terrestrial Biosequestration .....</b>           | <b>55</b> |
| 2.1 Terrestrial Ecosystems and the Carbon Cycle Imbalance.....                     | 55        |
| 2.1.1 Introduction.....                                                            | 55        |
| 2.1.2 Buying Time .....                                                            | 57        |
| 2.1.3 Adapting .....                                                               | 59        |

|           |                                                                                        |            |
|-----------|----------------------------------------------------------------------------------------|------------|
| 2.1.4     | An Unplanned Global Geophysical Experiment.....                                        | 60         |
| 2.1.5     | Rate of Change .....                                                                   | 61         |
| 2.1.6     | Carbon Reservoirs and Flux: From Stability to Imbalance .....                          | 63         |
| 2.2       | Enhanced Carbon Sequestration .....                                                    | 68         |
| 2.2.1     | CCS Technologies.....                                                                  | 68         |
| 2.2.2     | Terrestrial Biosequestration.....                                                      | 69         |
| 2.2.3     | Overview of Established Land Use and Management Strategies .....                       | 73         |
| 2.2.4     | New and Developing Technologies for Enhanced Terrestrial Sequestration.....            | 75         |
| 2.3       | The Problem of Permanence.....                                                         | 83         |
|           | References .....                                                                       | 86         |
