|--|---------------|
| About the Author | xiii |
| Preface | xv |
| Acknowledgments | xvii |
| Glossary | xix |
| Notation | xxi |
| Introduction | xxv |
| Part I PART SURFACES | 1 |
| 1 Geometry of a Part Surface | 3 |
| 1.1 On the Analytical Description of Ideal Surfaces | 3 |
| 1.2 On the Difference between <i>Classical Differential Geometry</i> and <i>Engineering Geometry of Surfaces</i> | 6 |
| 1.3 On the Analytical Description of Part Surfaces | 7 |
| 1.4 Boundary Surfaces for an Actual Part Surface | 9 |
| 1.5 Natural Representation of a Desired Part Surface | 11 |
| 1.5.1 <i>First fundamental form of a desired part surface</i> | 12 |
| 1.5.2 <i>Second fundamental form of a desired part surface</i> | 14 |
| 1.5.3 <i>Illustrative example</i> | 16 |
| 1.6 Elements of Local Geometry of a Desired Part Surface | 19 |
| 1.6.1 <i>Unit tangent vectors</i> | 19 |
| 1.6.2 <i>Tangent plane</i> | 20 |
| 1.6.3 <i>Unit normal vector</i> | 20 |
| 1.6.4 <i>Unit vectors of principal directions on a part surface</i> | 21 |
| 1.6.5 <i>Principal curvatures of a part surface</i> | 21 |
| 1.6.6 <i>Other parameters of curvature of a part surface</i> | 23 |
| 2 On the Possibility of Classification of Part Surfaces | 27 |
| 2.1 Sculptured Part Surfaces | 27 |
| 2.1.1 <i>Local patches of ideal part surfaces</i> | 27 |
| 2.1.2 <i>Local patches of real part surfaces</i> | 29 |

| | | |
|-------|--|----|
| 2.2 | Planar Characteristic Images | 33 |
| 2.2.1 | Dupin indicatrix | 33 |
| 2.2.2 | Curvature indicatrix | 38 |
| 2.2.3 | Circular chart for local patches of smooth regular part surfaces based on curvature indicatrix | 41 |
| 2.3 | Circular Diagrams at a Surface Point | 42 |
| 2.3.1 | Circular diagrams | 42 |
| 2.3.2 | Circular chart for local patches of smooth regular part surfaces based on circular diagrams | 52 |
| 2.4 | One More Useful Characteristic Curve | 53 |

Part II GEOMETRY OF CONTACT OF PART SURFACES **55**

| | | |
|----------|---|-----------|
| 3 | Early Works in the Field of Contact Geometry | 57 |
| 3.1 | Order of Contact | 57 |
| 3.2 | Contact Geometry of Part Surfaces | 59 |
| 3.3 | Local Relative Orientation of the Contacting Part Surfaces | 59 |
| 3.4 | First-Order Analysis: Common Tangent Plane | 64 |
| 3.5 | Second-Order Analysis | 65 |
| 3.5.1 | Comments on analytical description of the local geometry of contacting surfaces loaded by a normal force: Hertz proportional assumption | 65 |
| 3.5.2 | Surface of normal relative curvature | 68 |
| 3.5.3 | Dupin indicatrix of the surface of relative normal curvature | 71 |
| 3.5.4 | Matrix representation of equation of the Dupin indicatrix of the surface of relative normal curvature | 72 |
| 3.5.5 | Surface of relative normal radii of curvature | 73 |
| 3.5.6 | Normalized relative normal curvature | 73 |
| 3.5.7 | Curvature indicatrix of the surface of relative normal curvature | 74 |
| 3.6 | A Characteristic Curve $\mathcal{I}_{t_k}(\mathcal{R})$ of Novel Kind | 75 |
| 4 | An Analytical Method Based on Second Fundamental Forms of the Contacting Part Surfaces | 79 |
| 5 | Indicatrix of Conformity of Two Smooth Regular Surfaces in the First Order of Tangency | 83 |
| 5.1 | Preliminary Remarks | 83 |
| 5.2 | Indicatrix of Conformity for Two Smooth Regular Part Surfaces in the First Order of Tangency | 87 |
| 5.3 | Directions of Extremum Degree of Conformity of Two Part Surfaces in Contact | 94 |
| 5.4 | Asymptotes of the Indicatrix of Conformity $Cnf_R(P_1/P_2)$ | 97 |

| | | |
|----------|---|------------|
| 5.5 | Comparison of Capabilities of Indicatrix of Conformity $Cnf_R(P_1/P_2)$ and of Dupin Indicatrix of the Surface of Relative Curvature $Dup(\mathcal{R})$ | 98 |
| 5.6 | Important Properties of Indicatrix of Conformity $Cnf_R(P/T)$ of Two Smooth Regular Part Surfaces | 99 |
| 5.7 | The Converse Indicatrix of Conformity of Two Regular Part Surfaces in the First Order of Tangency | 99 |
| 6 | Plücker Conoid: More Characteristic Curves | 101 |
| 6.1 | Plücker Conoid | 101 |
| 6.1.1 | Basics | 101 |
| 6.1.2 | Analytical representation | 102 |
| 6.1.3 | Local properties | 103 |
| 6.1.4 | Auxiliary formulae | 104 |
| 6.2 | On Analytical Description of Local Geometry of a Smooth Regular Part Surface | 105 |
| 6.2.1 | Preliminary remarks | 105 |
| 6.2.2 | The Plücker conoid | 106 |
| 6.2.3 | Plücker curvature indicatrix | 108 |
| 6.2.4 | $\mathcal{H}_R(P_1)$ -indicatrix of a part surface | 109 |
| 6.3 | Relative Characteristic Curve | 112 |
| 6.3.1 | On a possibility of implementation of two Plücker conoids | 112 |
| 6.3.2 | $\mathcal{H}_R(P_1/P_2)$ -relative indicatrix of two contacting part surfaces P_1 and P_2 | 113 |
| 7 | Feasible Kinds of Contact of Two Smooth Regular Part Surfaces in the First Order of Tangency | 117 |
| 7.1 | On the Possibility of Implementation of the Indicatrix of Conformity for the Purposes of Identification of the Actual Kind of Contact of Two Smooth Regular Part Surfaces | 117 |
| 7.2 | Impact of Accuracy of the Computation on the Parameters of the Indicatrices of Conformity $Cnf_R(P_1/P_2)$ | 121 |
| 7.3 | Classification of Possible Kinds of Contact of Two Smooth Regular Part Surfaces | 122 |
| | Part III MAPPING OF THE CONTACTING PART SURFACES | 131 |
| 8 | \mathbb{R}-Mapping of the Interacting Part Surfaces | 133 |
| 8.1 | Preliminary Remarks | 133 |
| 8.2 | On the Concept of \mathbb{R} -Mapping of the Interacting Part Surfaces | 134 |
| 8.3 | \mathbb{R} -mapping of a Part Surface P_1 onto Another Part Surface P_2 | 136 |
| 8.4 | Reconstruction of the Mapped Part Surface | 140 |
| 8.5 | Illustrative Examples of the Calculation of the Design Parameters of the Mapped Part Surface | 141 |

| | | |
|-----------|--|------------|
| 9 | Generation of Enveloping Surfaces: General Consideration | 145 |
| 9.1 | Envelope for Successive Positions of a Moving Planar Curve | 145 |
| 9.2 | Envelope for Successive Positions of a Moving Surface | 149 |
| 9.2.1 | <i>Envelope for a one-parametric family of surfaces</i> | 149 |
| 9.2.2 | <i>Envelope for a two-parametric family of surfaces</i> | 152 |
| 9.3 | Kinematic Method for Determining Enveloping Surfaces | 154 |
| 9.4 | Peculiarities of Implementation of the Kinematic Method in Cases of Multi-parametric Relative Motion of the Surfaces | 164 |
| 10 | Generation of Enveloping Surfaces: Special Cases | 167 |
| 10.1 | Part Surfaces that Allow for <i>Sliding Over Themselves</i> | 167 |
| 10.2 | Reversibly Enveloping Surfaces: Introductory Remarks | 169 |
| 10.3 | Generation of Reversibly Enveloping Surfaces | 180 |
| 10.3.1 | <i>Kinematics of crossed-axis gearing</i> | 180 |
| 10.3.2 | <i>Base cones in crossed-axis gear pairs</i> | 182 |
| 10.3.3 | <i>Tooth flanks of geometrically accurate (ideal) crossed-axis gear pairs</i> | 186 |
| 10.3.4 | <i>Tooth flank of a crossed-axis gear</i> | 192 |
| 10.4 | On the Looseness of Two Olivier Principles | 197 |
| 10.4.1 | <i>An example of implementation of the first Olivier principle for generation of enveloping surfaces in a degenerate case</i> | 198 |
| 10.4.2 | <i>An example of implementation of the second Olivier principle for generation of enveloping surfaces in a degenerate case</i> | 199 |
| 10.4.3 | <i>Concluding remarks</i> | 200 |
| | Conclusion | 203 |
| | APPENDICES | 205 |
| | Appendix A: Elements of Vector Calculus | 207 |
| A.1 | Fundamental Properties of Vectors | 207 |
| A.2 | Mathematical Operations over Vectors | 207 |
| | Appendix B: Elements of Coordinate System Transformations | 211 |
| B.1 | Coordinate System Transformation | 211 |
| B.1.1 | <i>Introduction</i> | 211 |
| B.1.2 | <i>Translations</i> | 213 |
| B.1.3 | <i>Rotation about a coordinate axis</i> | 214 |
| B.1.4 | <i>Resultant coordinate system transformation</i> | 215 |
| B.1.5 | <i>Screw motion about a coordinate axis</i> | 216 |
| B.1.6 | <i>Rolling motion of a coordinate system</i> | 218 |
| B.1.7 | <i>Rolling of two coordinate systems</i> | 220 |
| B.2 | Conversion of the Coordinate System Orientation | 222 |
| B.3 | Transformation of Surface Fundamental Forms | 223 |

| | |
|---|------------|
| Appendix C: Change of Surface Parameters | 225 |
| References | 227 |
| Bibliography | 229 |
| Index | 233 |
