<b>Preface</b>	<b>xi</b>
<b>Notes on Contributors</b>	<b>xv</b>
<b>Part I THE CONTRIBUTIONS OF INTELLIGENT TECHNIQUES IN MULTICRITERIA DECISION AIDING</b>	<b>1</b>
1 Computational intelligence techniques for multicriteria decision aiding: An overview <i>Michael Doumpos and Constantin Zopounidis</i>	3
1.1 Introduction	3
1.2 The MCDA paradigm	4
1.2.1 Modeling process	4
1.2.2 Methodological approaches	6
1.3 Computational intelligence in MCDA	9
1.3.1 Statistical learning and data mining	9
1.3.2 Fuzzy modeling	12
1.3.3 Metaheuristics	15
1.4 Conclusions	17
References	18
2 Intelligent decision support systems <i>Gloria Phillips-Wren</i>	25
2.1 Introduction	25
2.2 Fundamentals of human decision making	26
2.3 Decision support systems	29
2.4 Intelligent decision support systems	30
2.4.1 Artificial neural networks for intelligent decision support	31
2.4.2 Fuzzy logic for intelligent decision support	34
2.4.3 Expert systems for intelligent decision support	35

2.4.4	Evolutionary computing for intelligent decision support	35
2.4.5	Intelligent agents for intelligent decision support	36
2.5	Evaluating intelligent decision support systems	38
2.5.1	Determining evaluation criteria	38
2.5.2	Multi-criteria model for IDSS assessment	39
2.6	Summary and future trends	40
	Acknowledgment	41
	References	41

## **Part II INTELLIGENT TECHNOLOGIES FOR DECISION SUPPORT AND PREFERENCE MODELING 45**

3	Designing distributed multi-criteria decision support systems for complex and uncertain situations	47
	<i>Tina Comes, Niek Wijngaards and Frank Schultmann</i>	
3.1	Introduction	47
3.2	Example applications	49
3.3	Key challenges	51
3.4	Making trade-offs: Multi-criteria decision analysis	53
3.4.1	Multi-attribute decision support	53
3.4.2	Making trade-offs under uncertainty	55
3.5	Exploring the future: Scenario-based reasoning	56
3.6	Making robust decisions: Combining MCDA and SBR	57
3.6.1	Decisions under uncertainty: The concept of robustness	57
3.6.2	Combining scenarios and MCDA	58
3.6.3	Collecting, sharing and processing information: A distributed approach	59
3.6.4	Keeping track of future developments: Constructing comparable scenarios	61
3.6.5	Respecting constraints and requirements: Scenario management	64
3.6.6	Assisting evaluation: Assessing large numbers of scenarios	66
3.7	Discussion	69
3.8	Conclusion	71
	Acknowledgment	71
	References	72
4	Preference representation with ontologies	77
	<i>Aida Valls, Antonio Moreno and Joan Borràs</i>	
4.1	Introduction	77
4.2	Ontology-based preference models	80
4.3	Maintaining the user profile up to date	85
4.4	Decision making methods exploiting the preference information stored in ontologies	88
4.4.1	Recommendation based on aggregation	91
4.4.2	Recommendation based on similarities	92
4.4.3	Recommendation based on rules	93

4.5 Discussion and open questions	94
Acknowledgments	95
References	96

## **Part III DECISION MODELS 101**

5 Neural networks in multicriteria decision support	103
<i>Thomas Hanne</i>	
5.1 Introduction	103
5.2 Basic concepts of neural networks	104
5.2.1 Neural networks for intelligent decision support	109
5.3 Basics in multicriteria decision aid	111
5.3.1 MCDM problems	111
5.3.2 Solutions of MCDM problems	112
5.4 Neural networks and multicriteria decision support	113
5.4.1 Review of neural network applications to MCDM problems	115
5.4.2 Discussion	121
5.5 Summary and conclusions	122
References	123
6 Rule-based approach to multicriteria ranking	127
<i>Marcin Szeląg, Salvatore Greco and Roman Słowiński</i>	
6.1 Introduction	127
6.2 Problem setting	130
6.3 Pairwise comparison table	132
6.4 Rough approximation of outranking and nonoutranking relations	133
6.5 Induction and application of decision rules	136
6.6 Exploitation of preference graphs	139
6.7 Illustrative example	149
6.8 Summary and conclusions	155
Acknowledgment	155
References	155
Appendix	159
7 About the application of evidence theory in multicriteria decision aid	161
<i>Mohamed Ayman Boujelben and Yves De Smet</i>	
7.1 Introduction	161
7.2 Evidence theory: Some concepts	163
7.2.1 Knowledge model	163
7.2.2 Combination	164
7.2.3 Decision making	165
7.3 New concepts in evidence theory for MCDA	165
7.3.1 First belief dominance	165
7.3.2 RBBD concept	167
7.4 Multicriteria methods modeled by evidence theory	169
7.4.1 Evidential reasoning approach	169

7.4.2	DS/AHP	172
7.4.3	DISSET	174
7.4.4	A choice model inspired by ELECTRE I	176
7.4.5	A ranking model inspired by Xu <i>et al.</i> 's method	179
7.5	Discussion	181
7.6	Conclusion	183
	References	183

## **Part IV MULTIOBJECTIVE OPTIMIZATION 189**

8	Interactive approaches applied to multiobjective evolutionary algorithms	191
	<i>Antonio López Jaimes and Carlos A. Coello Coello</i>	
8.1	Introduction	191
	8.1.1 Methods analyzed in this chapter	192
8.2	Basic concepts and notation	193
	8.2.1 Multiobjective optimization problems	193
	8.2.2 Classical interactive methods	195
8.3	MOEAs based on reference point methods	196
	8.3.1 A weighted distance metric	196
	8.3.2 Light beam search combined with NSGA-II	198
	8.3.3 Controlling the accuracy of the Pareto front approximation	198
	8.3.4 Light beam search combined with PSO	199
	8.3.5 A preference relation based on a weighted distance metric	199
	8.3.6 The Chebyshev preference relation	200
8.4	MOEAs based on value function methods	202
	8.4.1 Progressive approximation of a value function	202
	8.4.2 Value function by ordinal regression	202
8.5	Miscellaneous methods	203
	8.5.1 Desirability functions	203
8.6	Conclusions and future work	204
	Acknowledgment	205
	References	205
9	Generalized data envelopment analysis and computational intelligence in multiple criteria decision making	209
	<i>Yeboon Yun and Hirotaka Nakayama</i>	
9.1	Introduction	209
9.2	Generalized data envelopment analysis	211
	9.2.1 Basic DEA models: CCR, BCC and FDH models	212
	9.2.2 GDEA model	214
9.3	Generation of Pareto optimal solutions using GDEA and computational intelligence	217
	9.3.1 GDEA in fitness evaluation	217
	9.3.2 GDEA in deciding the parameters of multi-objective PSO	222
	9.3.3 Expected improvement for multi-objective optimization using GDEA	225

9.4	Summary	229
	References	231
10	Fuzzy multiobjective optimization	235
	<i>Masatoshi Sakawa</i>	
10.1	Introduction	235
10.2	Solution concepts for multiobjective programming	236
10.3	Interactive multiobjective linear programming	237
10.4	Fuzzy multiobjective linear programming	241
10.5	Interactive fuzzy multiobjective linear programming	242
10.6	Interactive fuzzy multiobjective linear programming with fuzzy parameters	248
10.7	Interactive fuzzy stochastic multiobjective linear programming	257
10.8	Related works and applications	266
	References	267

## **Part V APPLICATIONS IN MANAGEMENT AND ENGINEERING 273**

11	Multiple criteria decision aid and agents: Supporting effective resource federation in virtual organizations	275
	<i>Pavlos Delias and Nikolaos Matsatsinis</i>	
11.1	Introduction	275
11.2	The intuition of MCDA in multi-agent systems	276
11.3	Resource federation applied	277
	11.3.1 Describing the problem in a cloud computing context	277
	11.3.2 Problem modeling	278
	11.3.3 Assessing agents' value function for resource federation	279
11.4	An illustrative example	281
11.5	Conclusions	283
	References	283
12	Fuzzy analytic hierarchy process using type-2 fuzzy sets: An application to warehouse location selection	285
	<i>İrem Uçal Sarı, Başar Öztaysi, and Cengiz Kahraman</i>	
12.1	Introduction	285
12.2	Multicriteria selection	287
	12.2.1 The ELECTRE method	289
	12.2.2 PROMETHEE	289
	12.2.3 TOPSIS	289
	12.2.4 The weighted sum model method	290
	12.2.5 Multi-attribute utility theory	290
	12.2.6 Analytic hierarchy process	291
12.3	Literature review of fuzzy AHP	292
12.4	Buckley's type-1 fuzzy AHP	293
12.5	Type-2 fuzzy sets	296
12.6	Type-2 fuzzy AHP	298

12.7	An application: Warehouse location selection	299
12.8	Conclusion	304
	References	304
13	Applying genetic algorithms to optimize energy efficiency in buildings <i>Christina Diakaki and Evangelos Grigoroudis</i>	309
13.1	Introduction	309
13.2	State-of-the-art review	312
13.3	An example case study	316
13.3.1	Basic principles and problem definition	316
13.3.2	Decision variables	318
13.3.3	Decision criteria	318
13.3.4	Decision model	320
13.4	Development and application of a genetic algorithm for the example case study	323
13.4.1	Development of the genetic algorithm	323
13.4.2	Application of the genetic algorithm, analysis of results and discussion	328
13.5	Conclusions	330
	References	331
14	Nature-inspired intelligence for Pareto optimality analysis in portfolio optimization <i>Vassilios Vassiliadis and Georgios Dounias</i>	335
14.1	Introduction	335
14.2	Literature review	336
14.3	Methodological issues	338
14.4	Pareto optimal sets in portfolio optimization	339
14.4.1	Pareto efficiency	339
14.4.2	Mathematical formulation of the portfolio optimization problem	340
14.5	Computational results	341
14.5.1	Experimental setup	341
14.5.2	Efficient frontier	342
14.6	Conclusion	344
	References	345
